

Protect Massachusetts' Rivers from Drying Up

Kathleen Baskin, P.E.
Director of Water Policy and Planning
Executive Office of Environmental Affairs
100 Cambridge Street
Boston, MA

March 29, 2012

Dear Ms. Baskin,

We appreciate the significant efforts that have been put into the development of ecologically based streamflow criteria, which informed the Sustainable Water Management Initiative (SWMI) proposal. However, the proposed safe yield limits permit more water to be taken than current limits. Excessive amounts of water are already being taken in many river basins during the late summer periods of low water. We urge the EEA to make changes, water withdrawal reductions, to the SWMI Framework.

We are concerned when rivers and streams run dry due to no water recharging them from the ground. The state's safe yield determinations are proposed to be more than twice as great, more gallons per day taken, than are current withdrawals! Adding insult to ecosystem, the regulatory framework does not account for the water withdrawals by thousands of private and corporate wells in Massachusetts. And, it is counterproductive for the state to allow the transfer of registrations from old wells to new ones without consideration for what this does to groundwater supply or to ecosystems.

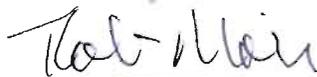

Stream flow criteria could provide guidance for effective Water Management Act permit limits and conditions. The current draft falls short because safe yield determinations allow for higher water withdrawals than current withdrawals, baselines that extend water rights beyond the terms of the WMA, registrations that DEP won't condition, and mitigation tiers that accommodate backsliding without requiring restoration.

It is an improvement to switch from a reliance on a drought advisory to the use of water flow gauges to make determinations when to mandate restrictions to non-essential water use. However, to use the annual 7-day impacted low flow volume, as indicated by the water flow gauges, results in too little water to enact restrictions on non-essential water use. During August, rivers depend on cooling groundwater for any water flow and only ground-cooled water can hold enough oxygen to support river life.

We have made progress in conserving water in Massachusetts. Over the last two decades water usage in the MWRA service area has gone down over 100 million gallons

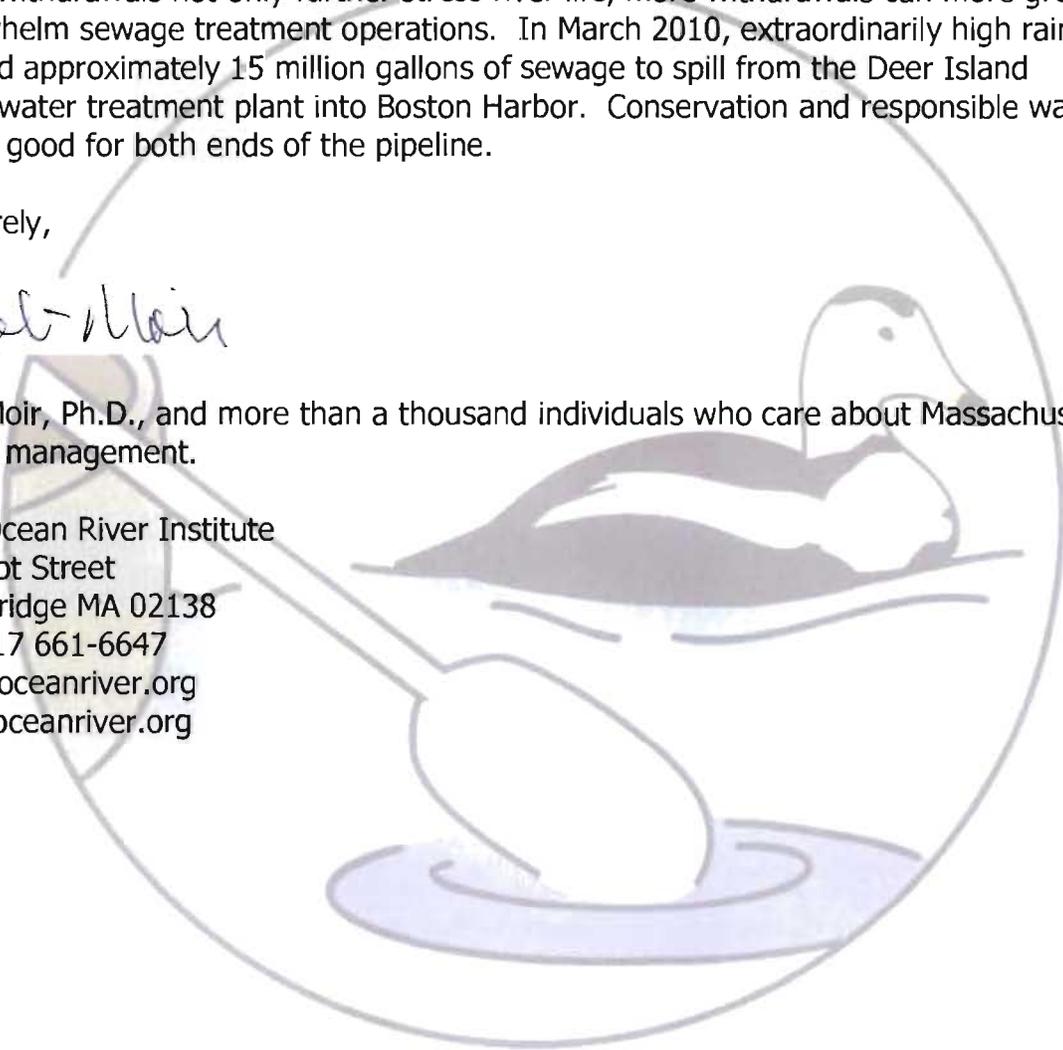

per day. The cost of sewer bills encourages us to save water. It seems wrong for the WMA to encourage taking more water with a liberal water usage permitting process. More withdrawals not only further stress river life, more withdrawals can more greatly overwhelm sewage treatment operations. In March 2010, extraordinarily high rainfall caused approximately 15 million gallons of sewage to spill from the Deer Island wastewater treatment plant into Boston Harbor. Conservation and responsible water use is good for both ends of the pipeline.

Sincerely,

Rob Moir, Ph.D., and more than a thousand individuals who care about Massachusetts water management.

It is vital to the integrity of the ecosystem to maintain minimal water levels in our rivers. As a student at UConn, I witnessed the damages caused by withdrawing too much water from the Fenton River, it was devastating. We need to be responsible in managing our water resources, as they are vital to the health of the environment.

As you know, fish cannot survive in rivers and streams that are chronically desiccated in summer and fall. To their credit, Massachusetts state staff and many others have worked to develop ecologically-based streamflow criteria including use of more stream gages to inform the permitting of municipal water withdrawals and when to ban non-essential water use. Unfortunately there are a number of negatives to the proposal that permits much more water to be taken from watersheds that are already suffer summer/autumn months. The comment period for the Sustainable Water Management Initiative will close next week. Please take action by adding your words to our letter calling for better water management.

You can't protect your children, if we let the polluters contaminate the rivers of the earth. Lives are at stake people, and they be the lives of your children. Fight and don't stop fighting against these greedy corporations and corrupt politicians.

Norman Hoffman
5091 Sunset Trail
Marietta, Ga 30068

There is never enough water. We struggle every day all over the world to have clean water. Once the water is gone- so is life. No plants, no oxygen, no animals, no humans. Clean water is part of the chain of life- you break it- you kill us.

Cara Schmidt
4068 Wildflower Ln
Tucker, Ga 30084

We are concerned when rivers and streams run dry due to no water recharging them from the ground. The regulatory framework does not account for the water withdrawals by thousands of private and corporate wells in Massachusetts. And, it is counterproductive for the state to allow the transfer of registrations from old wells to new ones without consideration for what this does to groundwater supply or to ecosystems.

My granddaughter and her family are moving to Massachusetts in a few weeks and have bought a home whose property backs up to a small river that flows from a lake into the nearby bay. That was one of the attractions for them to buy the property. I certainly hope that protection is given to these and other waterways so that the quality of their water does not degrade.

I write as a MA resident from 1953 - 2006 who is now a FL resident (snow-bird). In the six years we have been in north central FL we have seen the water table dropping - partly to provide water for the southern part of the state, partly because poor water management has allowed companies to draw down the rivers for their own purposes. Water management districts are finally coming together and are beginning to apply pressure to deny high water-withdrawing projects - like water bottling plants. Meanwhile, our water supply continues to diminish. I hope MA does not wait until they reach the sate FL has: my chiuldren and grandchildren up there deserve better!

We need to protect our environment and the animals that we have left for future generations. These areas are quickly fading as humans lay dominance to everything. I want my grandchildren to be able to go sit by rivers and lakes and watch the wildlife, look for turtles popping their heads out of the water. Our remaining natural resources are vital to our existence.

You are in a unique position to protect Massachusetts' rivers and streams and to demonstrate responsibility to all your constituents, human and otherwise. You can see to it that a broad understanding of the effects of human action prevails when considering water policies. You well know that human beings are not and cannot be the only creatures whose needs matter. We are part of the web of life and should not behave destructively from greed or ignorance or a magnified sense of our own importance. This precious water should be the focus of attention and care. Please exercise your leadership to assure protection of adequate stream flow in the beautiful state of Massachusetts. Thank you for your attention to this important matter.

Although I live in Indiana, water is an issue everywhere and loss of rivers and streams is critical to the well being of the nation wherever it happens. Please do not allow too much water to be taken now. If we have a hot dry summer you will regret the loss of the water -- too much too soon. Better to conserve while you have something to conserve. Please be very very careful. Water is too precious to lose and getting more precious every day.

As a liberal citizen of faith who is following closely the situation in Massachusetts in conserving water because this is an issue that also affects Wisconsin & across the U.S. I want to see the water stay clean for the wildlife & its residents in Massachusetts. We need to keep the rivers flowing with water rather than dry up because nature relies on the source for its animals & people. Please save water from withdrawals so that the rivers remain at healthy levels.

Climate change and exploding human populations are
straining the Earth's ability to provide the many
unaccounted services we humans take for granted.
Provision of fresh water is one of the things we most
urgently need to protect, and yet which we so often
arrogantly do not protect! All things in Nature are
connected and the entire basis of life is water---without it,
nothing flourishes.

susan rudnicki

Even though I live in California, I am concerned about the water in Massachusetts for several reasons. Ultimately the health of one of our states affects all the states. Secondly, a thoughtful water policy in one state will set standards that will create an impetus that other states may imitate. It's the brave soul that gets a policy going that leads the rest of us to do the right thing. Water is one of the most important resources on our planet. We need to take care of it, both fresh and salt water, to insure that life can continue. Thank you for caring!

Water will be a huge issue in the near future. It is in the best interest of all states and countries to do their best to save and protect this finite resource: clean potable water. It is very distressing to see the waste or pollution of something that is essential to life, not just animal life but the plant life we depend on to live. Humans better get their priorities straight soon or we will follow all the other species we have driven into extinction. If we are truly the most intelligent species we'd better start proving it.

I live in an area of the US that has serious water issues.
This year, we have had less than eight inches of rain in the

past eight months. It is doubtful that we will get much more the rest of the water year. Our water comes from deep wells that are replenished by the rain, in good years, and by state water the rest of the time. This makes our access to water unstable. We are quite serious about our water problems. It also allows us time to consider other regions of the US, where water access is plentiful, and yet, the citizens, and their governments, do not value their good fortune. Please treat your gift from our planet with respect, and seek to perpetuate its bounty. Not only do your wild flora and fauna profit from careful management, but, in addition human activities will flourish.

The supply of drinking water on our planet is shrinking considerably. Many places on Earth are experiencing drought and/or the lack of clean water. Therefore it is imperative to save the ground water supplies in Massachusetts: it is important to save clean, drinkable water anywhere. While one may argue that jobs are at stake, jobs can be reinvented and clean water cannot. Please look into this issue before it is too late.

I'm in favor of protecting all water habitats within a state's boundaries. On this planet, Earth, water means life and water habitats support wild life and domestic life. With Global Climate Change an ongoing reality, conserving water in all states is a vital program for all life, human and otherwise. We have never had so much trouble living with Nature as we have in the past 150 to 200 years or so.
