

1. Health resource planning will help the agency in my work by keeping clients out of Acute Care settings such as the ER. The information resulting from the effort will effectively help the homecare agency to collaborate with outreach and community resources to prevent the client from relapse and decline.
4. Some ideas for data sources in the future would be to interview the outreach workers, who work directly with the clients daily. The information that they have regarding clients would be tremendous. They know firsthand about the obstacles of working with the mental health population. Even a paper survey to be completed by the workers would give lots of info to help w/ data gaps.
