Barnstable County Fires 2010

2010 Fires

Barnstable County Fires in 2010

957 Total Fires — 418 Structures, 103 Vehicles & 436 Other Fires

Barnstable County ranked ninth out of the 14 Massachusetts counties in total reported fires. Barnstable County fire departments reported 957 fires to the Massachusetts Fire Incident Reporting System (MFIRS) in 2010. The 418 structure fires, 103 motor vehicle fires, 290 brush, tree, or lawn fires, 71 outside rubbish fires, 46 special outside fires, three cultivated vegetation or crop fires and 26 unclassified fires caused 27 civilian injuries, 12 fire service injuries and an estimated dollar loss of \$6.4 million. Barnstable County's fires accounted for 3% of the 32,680 Massachusetts fires reported in 2010.

Nineteen (19) of Barnstable County's 20 fire departments either reported incidents to the Massachusetts Fire Incident Reporting System (MFIRS) or certified that they had no reportable fires in 2010.

No Fire Deaths in 2010

Barnstable County did not have any reported fire deaths in 2010.

Structure & Motor Vehicle Fires Down

The total number of reported fire incidents increased by 69 from the 888 reported in 2009. Reported structure fires decreased by 41 from the 459 reported during the previous year. Motor vehicle fires decreased by 37 from the 140 reported during 2009. Outside and other fires increased by 147 from the 289 reported the year before.

Brush Fires Rise Dramatically

Barnstable County had a large increase in brush fires in 2010. Brush fires increased by 144, or 99%, from the 146 reported in 2009. This is the main reason for the 8% rise in overall fires in Barnstable County especially after decreases in both structure and motor vehicle fires.

BARNSTABLE COUNTY FIRES FROM 2006 TO 2010

Year	Total Fires	Structure Fires	Vehicle Fires	Other Fires	Total Arsons	Structure Arsons	Vehicle Arsons	Other Arsons
2006	1,110	460	131	519	67	14	8	45
2007	1,060	460	119	481	83	16	7	60
2008	1,082	480	124	478	93	12	7	74
2009	888	459	140	289	66	16	3	47
2010	957	418	103	436	66	7	7	52

Fire and Fire Death Rates

Barnstable County had 4.4 fires per 1,000 population. That figure ranks Barnstable County ninth in the state and below the state rate of 5.0 fires per 1,000 population. Barnstable County also had 0 fire deaths per 10,000 population, tying it for twelfth with three other Massachusetts counties and below the state rate of 0.05 fire deaths per 10,000 population.

Sandwich Has Barnstable County's Largest Loss Fire

- On May 31, 2010, at 12:36 p.m., the Sandwich Fire Department responded to a fire of undetermined cause in a single-family home. The fire originated in the first floor exterior balcony area. Five (5) firefighters were injured battling this fire. Detectors were present and operated. The building was not equipped with sprinklers. Damages were estimated to be \$675,000.

STRUCTURE FIRES**Reported Structure Fires Up**

The 418 structure fires caused 23 civilian injuries, 11 fire service injuries and an estimated dollar loss of \$5.4 million. These incidents represented 44% of Barnstable County's reported fires in 2010. The average estimated dollar loss per structure fire was \$12,905. The total number of reported structure fires decreased by 41, or 9%, from the 459 reported in 2009.

Arson Caused 2% of Structure Fires

The seven structure arsons caused two civilian injuries and an estimated dollar loss of \$282,000. Arson was indicated as the cause of 2% of the structure fires and 5% of Barnstable County's structure fire dollar loss. The seven structure arsons accounted for 11% of the Barnstable County arson fires reported in 2010. The total number of reported structure arsons fell by nine from 16 in 2009.

86% of Structure Arsons Occurred in Residences

Eighty-six percent (86%) of Barnstable County's seven structure arsons occurred in residential occupancies, and 14% occurred in mercantile or business properties.

BUILDING FIRES

There were 409 building fires of different types in Barnstable County in 2010. These 409 building fires accounted for 97.8% of all building fires in Barnstable County.

83% of Barnstable Building Fires Occurred in People's Homes

Three hundred and thirty-eight (338), or 83%, of Barnstable County's 409 building fires occurred in residential occupancies. Mercantile and business properties had 19 fires. Fifteen (15) fires took place in public assembly properties, including restaurants and churches. Special properties had 12 fires. Thirteen (13) fires took place in storage properties. Educational facilities experienced nine fires. Hospitals, prisons, and other institutional buildings experienced seven fires. Three (3) fires occurred in industrial, utility, defense, agricultural or mining facilities. One (1) fire took place in a manufacturing or processing facility in Barnstable County in 2010.

RESIDENTIAL FIRES

Residential Building Fires Are Down

There were 338 reported residential building fires in Barnstable County in 2010. These 338 fires are a decrease of 33, or 9%, from the 371 residential building fires reported in 2009.

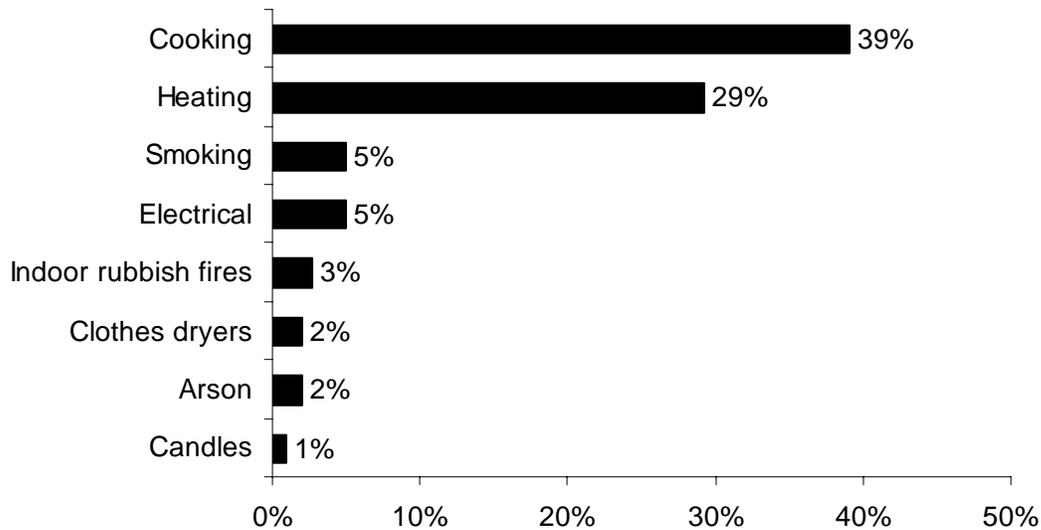

1- & 2-Family Homes Accounted for 83% of Residential Building Fires

The peak fixed property uses for residential building fires were one- or two-family homes, accounting for 83% of the building fires in Barnstable County; 9% occurred in apartments; 3% happened in hotels or motels; 2% happened in dormitories; 1% occurred in rooming houses; and less than 1% happened in residential board and care facilities. Four (4), or 1%, of the building fires in Barnstable County occurred in unclassified residential buildings.

Unattended Cooking Leading Cause of Residential Fires

The leading cause of residential building fires in Barnstable County was unattended cooking and other unsafe cooking practices, accounting for 39% of the fires. Heating fires accounted for 29% of the fires in people’s homes in 2010; 54% involved a fuel burner or boiler, and 48% involved a chimney or flue. Smoking and electrical problems each caused 5% of fires in residential buildings. Indoor rubbish fires accounted for 3%. Clothes dryers and arson each caused 2% of these fires. Candles caused 1% of the fires in residential occupancies in Barnstable County in 2010.

**2010 Leading Causes of Fires
in Barnstable County Homes**

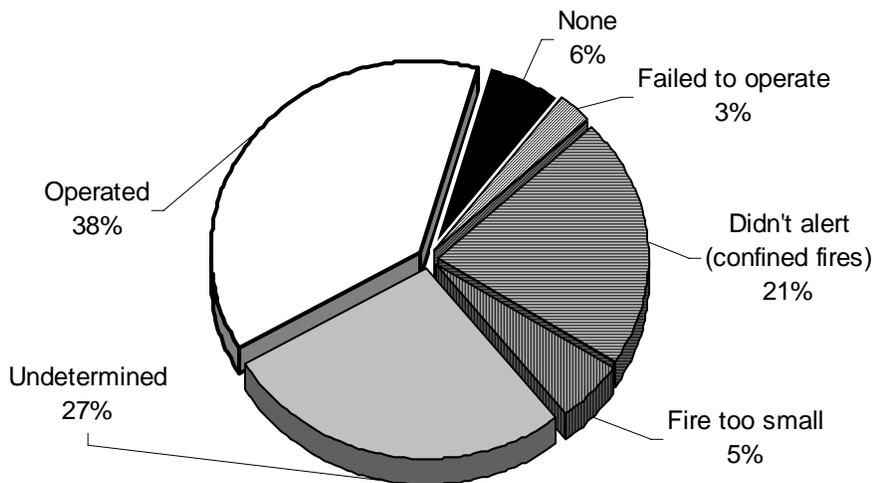

62% of Residential Building Fires Are Confined to Non-Combustible Containers¹

Two hundred and eight (208), or 62%, of all residential building fires were reported as confined to non-combustible containers in 2010. One hundred and eleven (111), or 33%, of all residential building fires reported in 2010 were cooking fires contained to a non-combustible container. Forty-eight (48) of the reported fires were confined to a chimney, accounting for 14% of residential building fires. Forty-two (42), or 12%, were fires confined to a fuel burner or boiler malfunction. Seven (7), or 2%, of these fires were rubbish fires contained to a non-combustible container in Barnstable County in 2010.

Detectors Alerted Occupants in Only 38% of Fires

Smoke or heat detectors operated and alerted the occupants in 128, or 38%, of the residential building fires. In 21% of these fires², the detectors did not alert the occupants. Detectors were present but did not operate in 3% of these incidents. In 6% of these fires, no detectors were present at all. The fire was too small to trigger the detector in 5% of the residential fires. Smoke detector performance was undetermined in 91 incidents, or 27%, of Barnstable County’s residential building fires.

Detector Status in Barnstable County's Residential Structure Fires 2010

30% of Detectors Failed From Power Failures, Shutoffs or Disconnects

Of the 10 fires where smoke detectors were present but failed to operate, three, or 30%, failed because the power was shut-off or disconnected. In two fires, or 20%, the batteries

¹ In MFIRS v5 a fire in a building contained to a non-combustible container (Incident Type = 113-118) does not have to have a Fire Module completed. Therefore the following data fields do not need to be completed: Area of Origin, Detector Status, Item First Ignited, Heat Source, Factors Contributing to Ignition, Cause of Ignition, and Equipment Involved In Ignition. These incidents are not included in the analysis of these fields.

²These represent confined fires where it was reported that the detector did not alert the occupants.

were either missing or disconnected. One (1), or 10%, failed because of a dead battery. It was undetermined in four cases, or 40%, why the detector failed.

VACANT BUILDINGS

2% of Building Fires Occurred in Vacant Buildings

Barnstable County reported seven fires that occurred in buildings that were vacant, under construction or demolition³. This represented 2% of the total 409 building fires reported to MFIRS in 2010. Four (4) one- or two-family homes, a restaurant, a parking garage, and a clubhouse were reported as vacant building fire incidents.

Two (2), or 10%, of the vacant building fires in Barnstable County in 2010 were determined to be intentionally set. Both of these fires occurred in a one- or two-family home.

JUVENILE-SET FIRES

8 Juvenile-set Fires

There were eight reported juvenile-set fires in Barnstable County in 2010. The one structure fire, six brush fires, and one outside mailbox fire caused \$250 in estimated damages.

ARSONS

66 Total Arsons⁴ — 7 Structures, 7 Vehicles & 52 Other Arsons

Sixty-six (66), or 7%, of Barnstable County's 957 fires were considered intentionally set, or, for purposes of this analysis, arson. The seven structure arsons, seven motor vehicle arsons and 52 outside and other arsons caused two civilian injuries and an estimated dollar loss of \$328,400.

Motor Vehicle & Outside Arson Up in 2010

The total number of reported arson fires remained the same with 66 reported in both 2009 and 2010. Reported structure arsons decreased by nine from the 16 reported the previous year. Motor vehicle arsons increased by four from the three reported in 2009. Reported outside and other arsons increased by five from the 47 reported in 2009.

ALL INCIDENTS

³ In version 4 a vacant building was defined by having a Fixed Property Use code in the subsection of construction, unoccupied properties, between 910 & 919. However in version 5, the Property Use is separate from the Building Status. In v5 a building is considered vacant if the Building Status is coded: 1- Under Construction; 3-Idle, not routinely used; 4-Under major renovation; 5-Vacant, secured; 6-Vacant, unsecured; & 7-Being demolished. The building use is coded separately in the Property Use field.

⁴ In MFIRS v5 a fire is considered an arson if the Cause of Ignition = 1 (Intentional) and the Age of Person (Fire Module) is greater than 17 or if the field is blank; or if the Wildland Module is used, the Wildland Fire Cause = 7 (Incendiary) and the Age of the Person (Wildland Module) is greater than 17 or if the field is left blank.

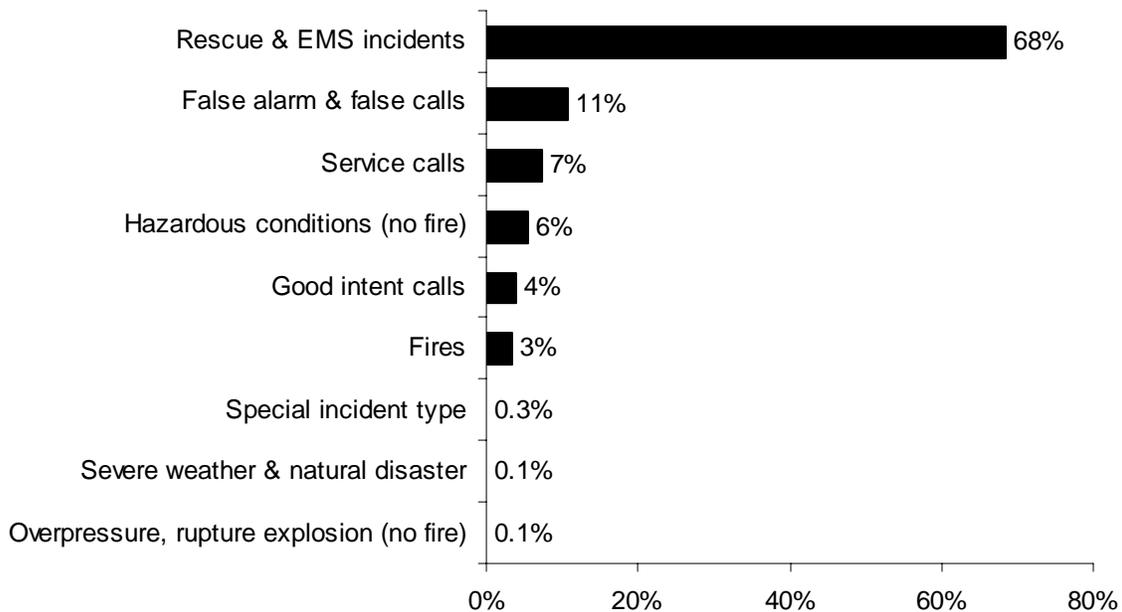

Rescue & EMS Calls Are Over 2/3 of All Reported Incidents⁵

In 2010, Barnstable County fire departments reported 33,716 responses⁶ to MFIRS. Of these 33,716 incidents, 32,575 non-fire calls were voluntarily reported.

Of these 32,575 non-fire calls, 23,053, or 68% of all of the responses reported in 2010, were reported rescue and emergency medical services (EMS) calls; 3,641, or 11%, were reported false alarm or false calls; 2,502, or 7%, were reported service calls such as lock-outs, water or smoke problems, unauthorized burning or public service assistance; 1,877, or 6%, were reported hazardous condition calls with no fire; 1,320, or 4%, reported good intent calls; 108, or 0.3%, were special incident type calls such as citizen complaints; 44, or 0.1%, were severe weather responses; and 30, or 0.1%, were reported overpressure, rupture, explosion or overheat calls with no fire.

One thousand one hundred and forty-one (1,141), or 3%, of the total responses submitted by Barnstable County fire departments were fires.

2010 Responses by Incident Type

⁵ The reason for the large decrease from the 39,254 responses reported in 2009, is because of computer problems the Yarmouth Fire Department was only able to report 347 incidents. In 2009 Yarmouth reported 6,205 total incidents.

⁶ These figures include responses in which Barnstable County fire departments gave mutual aid to other fire departments.

Barnstable County Departments Gave Aid 1,208 Times

In 2010, Barnstable County fire departments reported coming to the aid of other fire departments 1,208 times. Of these 1,208 responses, 723, or 60%, were for rescue or EMS incidents; 176, or 15%, were for fires; 166, or 14%, were for service calls such as cover assignments; 91, or 8%, were for good intent calls; 34, or 3%, were for hazardous conditions calls with no fire; 16, or 1%, were for false alarms or false calls; and two, or 0.2%, were special incident types.

Barnstable County Received Mutual Aid in 786 Incidents

In 2010, Barnstable County fire departments received aid from surrounding departments in 786 incidents. Of these 786 incidents, 573, or 73%, were rescue and emergency medical services calls; 131, or 17%, were for fires; 25, or 3%, were good intent calls; 23, or 3%, were false alarms or false calls; 22, or 3%, were hazardous conditions calls with no fire; eight, or 1%, were service calls; two, or 0.3%, were severe weather or natural disaster calls; one, or 0.11%, was an overpressure, rupture, explosion or overheat call with no fire; and one, or 0.1%, was a special incident type.

¹³ The MA Military Reservation (MMR) Fire Department became a state fire department in October of 2008. Prior to that it was the Otis Air Force Base Fire Department – a federal fire department and reported all its incidents to the Department of Defense. In 2008, MMR reported 179 total incidents (0 fires) to MFIRS from October through December.

*Non-reporting fire department

MFIRS
Massachusetts Fire Incident Reporting System

Berkshire County Fires in 2010

609 Total Fires — 356 Structures, 47 Vehicles & 206 Outside and Other Fires

Berkshire County ranked tenth out of the fourteen Massachusetts counties in total reported fires. Berkshire County fire departments reported 609 fires to the Massachusetts Fire Incident Reporting System (MFIRS) in 2010. The 356 structure fires, 47 motor vehicle fires, 106 brush, tree or lawn fires, 52 outside rubbish fires, 22 special outside fires, one cultivated crop or vegetation fire, and 25 other fires caused 10 civilian injuries, 11 fire service injuries and an estimated dollar loss of \$5.8 million. Berkshire County's fires accounted for 2% of the 32,680 Massachusetts fires reported in 2010.

Twenty-nine (29) of Berkshire County's 31 fire departments either reported incidents to the Massachusetts Fire Incident Reporting System (MFIRS) or certified that they had no reportable fires in 2010.

Structure & Motor Vehicle Fires Down

The total number of reported fire incidents decreased by 59 from the 668 reported in 2009. Reported structure fires decreased by 56 from the 412 reported during the previous year. Motor vehicle fires decreased by 13 from the 60 reported the year before. Outside and other fires increased by 10 from the 196 reported in 2009.

BERKSHIRE COUNTY FIRES FROM 2006 TO 2010

Year	Total Fires	Structure Fires	Vehicle Fires	Other Fires	Total Arsons	Structure Arsons	Vehicle Arsons	Other Arsons
2006	736	392	47	297	46	10	7	30
2007	673	375	62	236	30	12	1	17
2008	714	431	46	237	42	8	1	33
2009	668	412	60	196	44	18	6	20
2010	609	356	47	206	42	8	4	30

Fire and Fire Death Rates

Berkshire County had 4.6 fires per 1,000 population. That figure ranks Berkshire County seventh in the state and below the state rate of 5.0 fires per 1,000 population. Berkshire County also had 0 fire deaths per 10,000 populations ranking it tied for twelfth among Massachusetts counties and below the state rate of 0.05 fire deaths per 10,000 population.

Lenox Had Berkshire County's Largest Loss Fire

- On December 22, 2010, at 2:16 p.m., the Lenox Fire Department was called to a fire at an historic inn. The cause of the fire was undetermined after the investigation was completed. No one was injured at this fire. Detectors were present and alerted the occupants. The building was not sprinklered. Damages from this fire were estimated to be \$2.25 million.

STRUCTURE FIRES

Reported Structure Fires Down

The 356 structure fires caused nine civilian injuries, 11 fire service injuries and an estimated dollar loss of \$5.5 million. These incidents represented 58% of Berkshire County's reported fires in 2010. The average estimated dollar loss per structure fire was \$15,333. The total number of reported structure fires decreased by 56, or 14%, from the 412 reported in 2009.

Arson Caused 2% of Structure Fires

The eight structure arsons caused one fire service injury and an estimated dollar loss of \$55,800. Arson was indicated as the cause of 2% of the structure fires and 1% of Berkshire County's structure fire dollar loss. The eight structure arsons accounted for 19% of the Berkshire County arson fires reported in 2010. The total number of reported structure arsons increased by 10 from 10 in 2009.

38% of Structure Arsons Occurred in Residences

Three (3), or 38%, of Berkshire County's eight structure arsons occurred in residential occupancies. Businesses and storage facilities each had two structure arsons; and an additional structure arson occurred in an educational facility in 2010.

BUILDING FIRES

There were 350 building fires of different types in Berkshire County in 2010. These 350 building fires accounted for 98.3% of all structure fires in Berkshire County.

Almost 3/4 of Berkshire Building Fires Occurred in People's Homes

Two hundred and fifty-six (256), or 73%, of Berkshire County's 350 building fires occurred in residential occupancies. Special properties, such as outbuildings or sheds, had 22 fires. Twenty (20) fires took place in public assembly properties, including restaurants and churches. Fifteen (15) fires occurred at educational facilities. Mercantile and business properties had 14 fires. Storage facilities had 12 fires. Hospitals, prisons, and other institutional buildings experienced seven fires. One (1) fire occurred at a manufacturing facility in Berkshire County in 2010. There were also three fires at unclassified buildings in Berkshire County in 2010.

RESIDENTIAL FIRES

Residential Building Fires Down

There were 256 reported residential building fires in Berkshire County in 2010. These 256 fires are a decrease of 58, or 18%, from the 314 residential building fires reported in 2009.

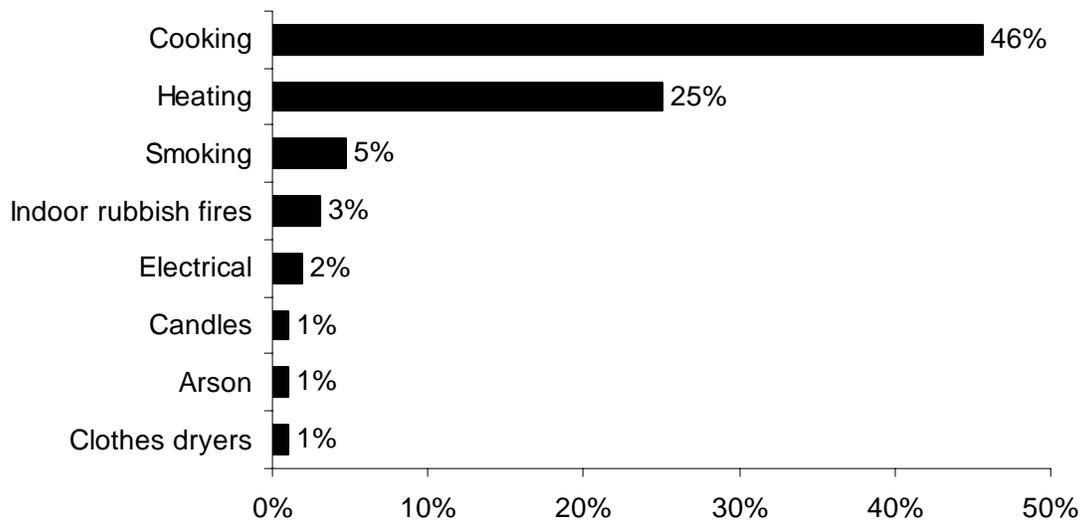

1- & 2-Family Homes Accounted for 62% of Residential Building Fires

The peak fixed property uses for residential building fires were one- or two-family homes, accounting for 62% of the building fires in Berkshire County; 32% occurred in apartments; 4% happened in hotels or motels; 1% occurred in rooming houses; and less than 1% occurred in residential board and care facilities. Four (4), or 2%, of the building fires in Berkshire County occurred in unclassified residential buildings.

Unattended Cooking Causes 46% of Residential Fires

The leading cause of residential building fires in Berkshire County was unattended cooking and other unsafe cooking practices, accounting for 46% of the fires. Heating caused 25% of the residential building fires; of which 25, or 39%, were caused by chimney, fireplace or flue fires. Smoking caused 5% of the fires. Indoor rubbish fires caused 3% of these fires. Electrical problems caused 2%. Candles, arson and clothes dryers were each responsible for 1% of Berkshire County’s residential building fires in 2010.

2010 Leading Causes of Fires in Berkshire County Homes

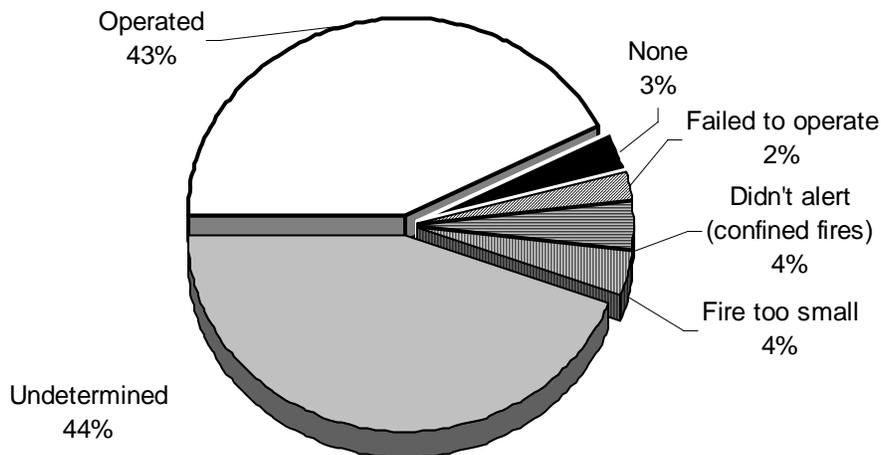

68% of Residential Building Fires Are Confined to Non-Combustible Containers¹

One hundred and seventy-three (173), or 68%, of these fires were confined to a non-combustible container. One hundred and seven (107), or 42%, of all residential building fires reported in 2010 were cooking fires contained to a non-combustible container. Fires confined to a fuel burner or boiler malfunction accounted for 34, or 13%. Twenty-four (24) of the reported fires were confined to a chimney accounting for 9% of residential building fires. Eight (8), or 3%, of these fires in Berkshire County in 2010 were indoor rubbish fires.

Detectors Alerted Occupants in 41% of Fires

Smoke or heat detectors operated and alerted the occupants in 109, or 43%, of the residential building fires. In 4% of these fires², the detectors did not alert the occupants. Detectors were present but did not operate in 2% of these incidents. In 3% of these fires, no detectors were present at all. The fire was too small to trigger the detector in 4% of the residential fires. Smoke detector performance was undetermined in 114 incidents, or 44%, of Berkshire County’s residential building fires.

Detector Status in Berkshire County's Residential Structure Fires 2010

¹ In MFIRS v5 a fire in a building contained to a non-combustible container (Incident Type = 113-118) does not have to have a Fire Module completed. Therefore the following data fields do not need to be completed: Area of Origin, Detector Status, Item First Ignited, Heat Source, Factors Contributing to Ignition, Cause of Ignition, and Equipment Involved In Ignition. These incidents are not included in the analysis of these fields.

²These represent confined fires where it was reported that the detector did not alert the occupants.

1 Failed Detector Had Missing or Disconnected Batteries

Of the nine fires where smoke detectors were present but failed to operate, one, or 17%, failed because the battery was either missing or disconnected. One (1) other detector failed because of a lack of maintenance, causing 17% of the failed detectors in Berkshire County in 2010. It was undetermined why the other six detectors, or 67%, failed to operate.

VACANT BUILDINGS

3% of Building Fires Occurred in Vacant Buildings

Berkshire County reported 11 fires that occurred in buildings that were vacant, under construction or demolition³. This represented 3% of the total 350 building fires reported to MFIRS in 2010. Six (6) one- or two-family homes, two outbuildings or sheds, one business office; one unclassified storage facility, and one railroad right of way were reported as vacant building fire incidents.

Two (2), or 18%, of the vacant building fires in Berkshire County in 2010 were determined to be intentionally set. One (1) of these fires was in a one- or two-family home while the other fire occurred in an unclassified storage facility.

JUVENILE-SET FIRES

0 Juvenile-set Fires

There were no reported juvenile-set fires in Berkshire County in 2010.

ARSONS

42 Total Arsons — 8 Structure, 4 Vehicle & 30 Other Arsons

Forty-two (42), or 7%, of Berkshire County's 609 fires were intentionally set, or, for purposes of this analysis, arson⁴. The eight structure arsons, four motor vehicle arsons and 30 outside and other arsons caused one civilian injury, one fire service injury and an estimated dollar loss of \$75,605.

³ In version 4 a vacant building was defined by having a Fixed Property Use code in the subsection of construction, unoccupied properties, between 910 & 919. However in version 5, the Property Use is separate from the Building Status. In v5 a building is considered vacant if the Building Status is coded: 1- Under Construction; 3-Idle, not routinely used; 4-Under major renovation; 5-Vacant, secured; 6-Vacant, unsecured; & 7-Being demolished. The building use is coded separately in the Property Use field.

⁴ In MFIRS v5 a fire is considered an arson if the Cause of Ignition = 1 (Intentional) and the Age of Person (Fire Module) is greater than 17 or if the field is blank; or if the Wildland Module is used, the Wildland Fire Cause = 7 (Incendiary) and the Age of the Person (Wildland Module) is greater than 17 or if the field is left blank.

Structure & Motor Vehicle Arsons Down

The total number of reported arson fires decreased by two from the 44 reported in 2009. Reported structure arsons decreased by 10 from 18 in 2009. Motor vehicle arsons decreased by two from the six reported the previous year. Reported outside and other arsons increased by 10 from the 20 reported in 2009.

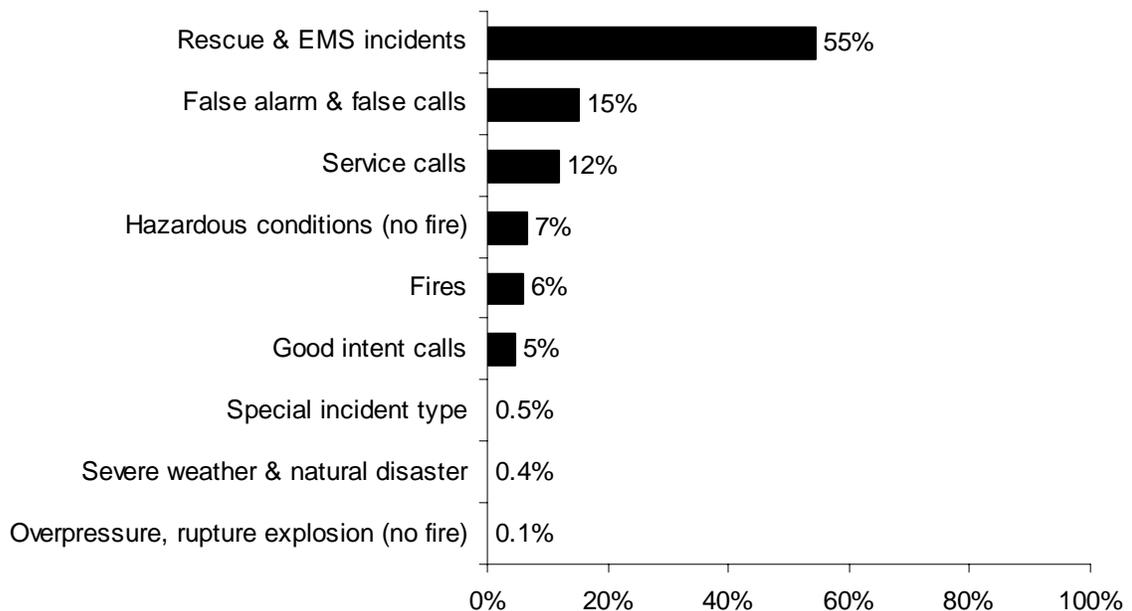

ALL INCIDENTS

Rescue & EMS Calls Are Over 1/2 of All Reported Responses

In 2010, Berkshire County fire departments reported 11,419 responses⁵ to MFIRS. Of these 11,419 incidents, 10,757 non-fire incidents were voluntarily reported.

Of these 10,757 non-fire responses, 6,234, or 55% of all the responses reported in 2010, were reported rescue and emergency medical services (EMS) calls; 1,738, or 15%, were reported false alarm or false calls; 1,370, or 12%, were reported service calls such as lock-outs, water or smoke problems, unauthorized burning or public service assistance; 768, or 7%, were reported hazardous condition calls with no fire; 537, or 5%, were reported good intent calls; 53, or 0.5%, were special incident type calls such as citizen complaints; 44, or 0.4%, were severe weather responses; and 13, or 0.1%, were reported overpressure, rupture, explosion or overheat calls with no fire.

2010 Responses by Incident Type

⁵ These figures include responses in which Berkshire County fire departments gave mutual aid to other fire departments.

Six hundred and sixty-two (662), or 6%, of the total responses submitted by Berkshire County fire departments were fires.

Berkshire County Departments Reported Giving Mutual Aid 154 Times

In 2010, Berkshire County fire departments reported coming to the aid of other fire departments 154 times. Of these 154 responses, 52, or 34%, were for fires; 51, or 33%, were for rescue or EMS calls; 29, or 19%, were for service calls such as cover assignments; five, or 3%, were for false alarms; four, or 3%, were good intent calls; two, or 1%, were special incident types; and one, or 1%, was for a severe weather call.

Berkshire County Received Mutual Aid in 232 Incidents

In 2010, Berkshire County fire departments reported receiving aid from surrounding departments in 232 incidents. Of these 232 incidents, 242, or 79%, were rescue and emergency medical services calls; 28, or 9%, were for fires; 11, or 4%, were hazardous conditions calls with no fire; 10, or 3%, were false alarms or false calls; four, or 1%, were service calls; three calls, or 1%, were severe weather calls; and one call, or less than 1%, was an overpressure, rupture explosion with no after fire call.

⁶ This field does not need to be completed for confined fires. Certain codes are inferred from the Incident Type.

⁷ These figures were calculated only from those incidents, which were coded as Unconfined fires (Incident Types 111-112 or 120-129). The USFA & NFPA do not recommend inferring codes for Heat Source from the fires contained to non-combustible containers (Incident Types 113 – 118). This field does not need to be completed for confined fires, but is sometimes voluntarily reported.

Item First Ignited⁸	%	Factor Contrib. to Ignit.	%	%Unconfined⁹
Food, cooking materials	45%	Too close to combustibles	3%	10%
Flammable, combustible liquid	13%	Abandoned materials	2%	8%

Stove, heating	2%	Undetermined	5%	16%

Detector Alerted Occupants (Confined Fires in Non-Combustible Containers)

Alerted occupants	43%
Didn't alert occupants	6%
Undetermined	51%

⁸ This field does not need to be completed for confined fires. Certain codes are inferred from the Incident Type.

⁹ Some fields in version 5 allow for multiple entries. Therefore the number of entries may be greater than the actual number of incidents being analyzed. These figures were calculated only from those incidents, which were coded as Unconfined fires (Incident Types 111-112 or 120-129). The USFA & NFPA do not recommend inferring codes for Factors Contributing to Ignition from the fires contained to non-combustible containers (Incident Types 113 – 118). This field does not need to be completed for confined fires.

¹⁰ This field does not need to be completed for confined fires. Certain codes are inferred from the Incident Type.

¹¹ These figures were calculated only from those incidents, which were coded as Unconfined fires (Incident Types 111-112 or 120-129). The USFA & NFPA do not recommend inferring codes for Cause of Ignition from the fires contained to non-combustible containers (Incident Types 113 – 118). This field does not need to be completed for confined fires.

Pittsfield Fires in 2010

307 Total Fires — 170 Structures, 19 Vehicles & 118 Other Fires

The Pittsfield Fire Department reported 307 fires to the Massachusetts Fire Incident Reporting System (MFIRS) in 2010. The 170 structure fires, 19 motor vehicle fires, 50 brush fires, 39 outside rubbish fires, 15 special outside fires; one cultivated crop or vegetation fire; and 13 unclassified fires caused three civilian injuries, nine firefighter injuries and an estimated dollar loss of \$2 million. There were no fatal fires in Pittsfield in 2010.

Structure Fires Up Slightly

Total fires increased by 32 from the 275 incidents reported in 2009. Reported structure fires increased by 13 from the 157 reported during the previous year. Motor vehicle fires decreased by four from 23 the year before. Outside and other fires increased by 23 from the 95 reported in 2009.

PITTSFIELD FIRES FROM 2006 TO 2010

	Total Fires	Structure Fires	Vehicle Fires	Other Fires	Total Arsons	Structure Arsons	Vehicle Arsons	Other Arsons
2006	336	155	19	162	26	5	5	16
2007	317	155	31	131	16	8	1	7
2008	312	166	19	127	26	5	1	20
2009	275	157	23	95	25	14	2	9
2010	307	170	19	118	25	5	2	18

BUILDING FIRES

There were 167 building fires of different types in Pittsfield in 2010. These 167 building fires accounted for 98.2% of all structure fires in Pittsfield.

Almost 3/4 of Building Fires in Homes

The 167 building fires that occurred in Pittsfield in 2010 can be broken down by fixed property use as follows: 123, or 74% of all building fires, were in residential properties; 21 fires occurred in special properties; eight happened in mercantile or business properties; six fires occurred in public assembly properties; five fires happened in storage facilities; two fires occurred in institutional facilities; one fire occurred in an educational facility; and another fire happened at a manufacturing or processing facility.

RESIDENTIAL FIRES

Residential Building Fires Up Slightly

There were 123 reported residential building fires in Pittsfield in 2010. These 123 fires are an increase of six from the 117 reported residential building fires reported in 2009.

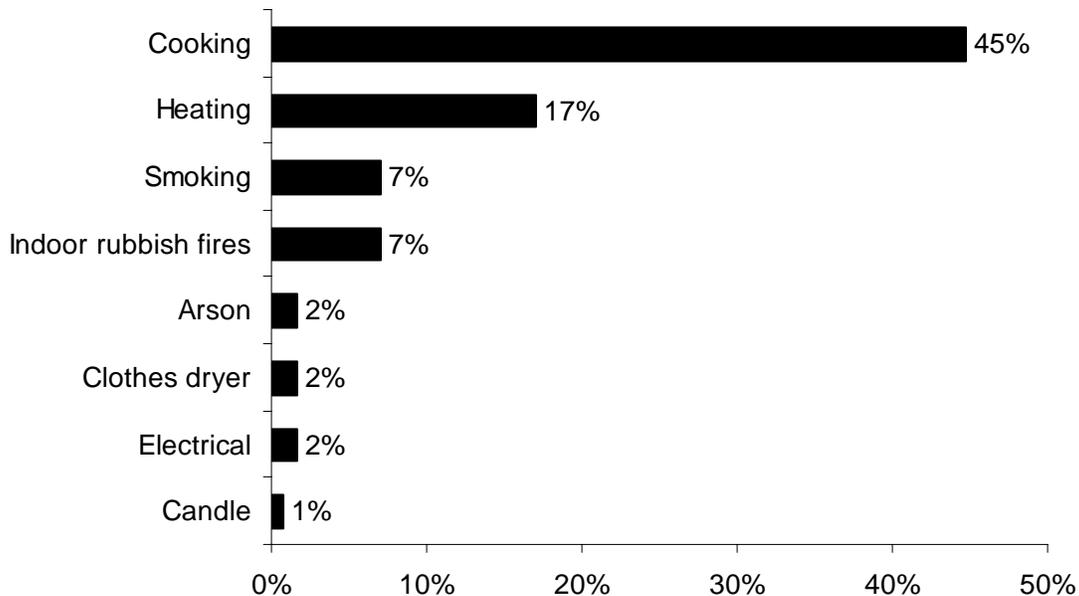

1- or 2-Family Homes Accounted for 59% of Residential Building Fires

The peak fixed property uses for residential building fires were 1- or 2-family homes, accounting for 59% of the building fires in Pittsfield; 39% occurred in apartments; 1% happened in rooming houses; and another 1% occurred in residential board and care facilities.

Unattended Cooking Leading Cause of Residential Fires

The leading cause of residential building fires in Pittsfield was unattended cooking and other unsafe cooking practices, accounting for 45% of these fires. Heating fires caused 17% of these fires. Smoking and indoor rubbish fires were each the cause of 7% of the fires. Arsons, clothes dryers and electrical problems each caused 2%. Candles caused 1% of the fires in Pittsfield's residential occupancies in 2010.

2010 Leading Causes of Fires in Pittsfield's Homes

63% of Residential Building Fires Are Confined to Non-Combustible Containers¹

Seventy-seven (77), or 63% of all residential building fires were confined to non-combustible containers in 2010. Forty-eight (48), or 39%, of all residential building fires reported in 2010 were cooking fires contained to a non-combustible container. Eighteen (18), or 15%, were fires confined to a fuel burner or boiler malfunction. Eight (8), or 7%,

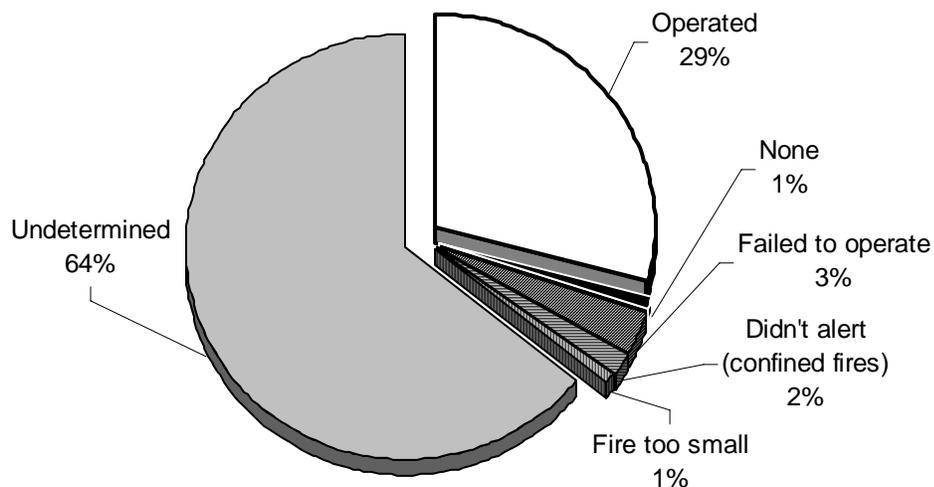

¹ In MFIRS v5 a fire in a building contained to a non-combustible container (Incident Type = 113-118) does not have to have a Fire Module completed. Therefore the following data fields do not need to be completed: Area of Origin, Detector Status, Item First Ignited, Heat Source, Factors Contributing to Ignition, Cause of Ignition, and Equipment Involved In Ignition. These incidents are not included in the analysis of these fields.

of these fires, were rubbish fires contained to a non-combustible container. Three (3) fires, or 2%, were reported to have been contained to a chimney or flue.

Detectors Worked in Only 29% of Fires

Smoke or heat detectors operated and alerted the occupants in 36, or 29%, of the residential building fires. In 2% of these fires², the detectors did not alert the occupants. There were no detectors in 1% of these fires. Detectors were present but did not operate in 3% of these incidents. The fire was too small to trigger the detector in 1% of these fires. Smoke detector performance was undetermined in 79 incidents, or 64% of Pittsfield's residential building fires.

Detector Status in Pittsfield's Residential Fires 2010

The lack of data on smoke detector performance in confined fires does not present a true picture of functioning smoke alarms in Pittsfield. Improved collection of data on whether or not the smoke alarms alerted the occupants to the fire would provide a better understanding of this issue.

1 of 4 Detectors Failed Detectors From a Missing Battery

Of the four fires where smoke detectors were present but failed to operate, one, or 25%, failed because of a missing battery. Another detector, or 25%, failed from a lack of maintenance. It was undetermined why the other two detectors, or 50%, failed to operate.

² These represent confined fires where it was reported that the detector did not alert the occupants.

VACANT BUILDINGS

2% of Building Fires Occurred in Vacant Buildings

Pittsfield reported four fires that occurred in buildings that were vacant, under construction or demolition³. This represented 2% of the total 167 building fires reported to MFIRS in 2010. Two (2) 1- or 2-family homes, a business office and a railroad right of way were reported as vacant building fire incidents.

JUVENILE-SET FIRES

0 Juvenile-set Fires

There were no reported juvenile-set fires in Pittsfield in 2010.

ARSONS

25 Arsons⁴ - 5 Structure, 2 Motor Vehicle and 18 Outside & Other

Twenty-five (25), or 8%, of Pittsfield's 307 fires were considered intentionally set, or, for purposes of this analysis, arson. There were five structure arsons, two motor vehicle arsons and 18 outside and other arsons.

Structure Arsons Down

The total number of arsons remained the same with 25 reported in both 2010 and 2009. Reported structure arsons decreased by nine from the 14 reported in 2009. Reported motor vehicle arsons remained the same with two reported in both 2010 and 2009. Outside and other arsons increased by nine from the nine reported the year before.

76 Fires Reported as Undetermined or Still Under Investigation

In 2010, Pittsfield reported 76 fires under investigation or cause undetermined after investigation. Sixty-six (66), or 87%, of these fires were reported to be undetermined after investigation. The other five, or 13%, were still under investigation.

Thirty-four (34), or 45%, of these 76 fires were structure fires. Six (6), or 8% were motor vehicle fires; and 36, or 47%, were outside or other fires. Because so many fires or under investigation or undetermined after investigation, the true arson number might be actually higher in Pittsfield in 2010.

³ In version 4 a vacant building was defined by having a Fixed Property Use code in the subsection of construction, unoccupied properties, between 910 & 919. However in version 5, the Property Use is separate from the Building Status. In v5 a building is considered vacant if the Building Status is coded: 1- Under Construction; 3-Idle, not routinely used; 4-Under major renovation; 5-Vacant, secured; 6-Vacant, unsecured; & 7-Being demolished. The building use is coded separately in the Property Use field.

⁴ In MFIRS v5 a fire is considered an arson if the Cause of Ignition = 1 (Intentional) and the Age of Person (Fire Module) is greater than 17 or if the field is blank; or if the Wildland Module is used, the Wildland Fire Cause = 7 (Incendiary) and the Age of the Person (Wildland Module) is greater than 17 or if the field is left blank.

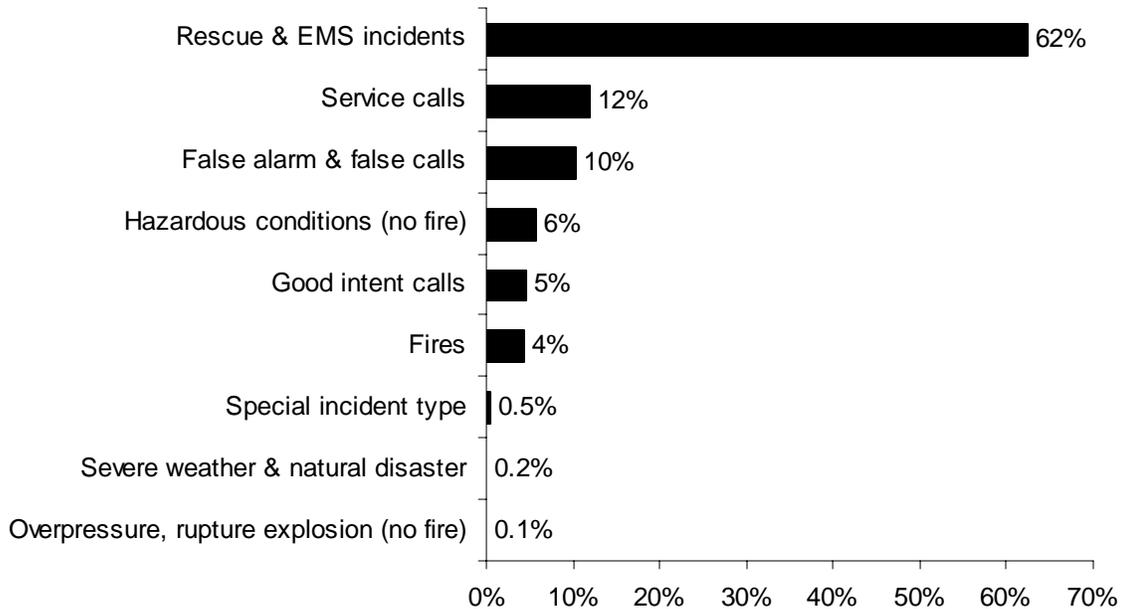

Rescue & EMS Calls Are 62% of All Reported Incidents

In 2010, Pittsfield voluntarily reported 7,102 incidents to MFIRS. Of these 7,223 incidents, 6,915, or 96%, were non-fire incidents.

Of these 6,915 non-fire incidents 4,511, or 62% of all reported incidents in 2010, were reported rescue and emergency medical services (EMS) calls; 860, or 12%, were reported service calls such as lock-outs, water or smoke problem, unauthorized burning or public service assistance; 739, or 10%, were reported false alarm or false calls; 413, or 6%, were reported hazardous condition calls with no fire; 336, or 5%, were reported good intent calls; 34, or 0.5%, were special type incidents; 15, or 0.2%, were severe weather calls; and seven, or 0.1%, were reported overpressure, rupture, explosion or overheat calls with no fire.

In 2010, Pittsfield reported 308 fires, accounting for 4% of all reported incidents.

2010 Incidents by Incident Type

Pittsfield Gave Mutual Aid in 5 Incidents

In 2010, Pittsfield reported giving mutual aid to other surrounding fire departments in five incidents. Two were for hazardous condition calls with no fire; one was a good intent call; one was a service call and the other was a rescue or EMS call.

Pittsfield Received Mutual Aid in 3 Incidents

In 2010, surrounding fire departments gave aid to Pittsfield at three incidents. Two (2) were for fires, and the other incident was a service call.

⁷ This field does not need to be completed for confined fires. Certain codes are inferred from the Incident Type.

⁸ Some fields in version 5 allow for multiple entries. Therefore the number of entries may be greater than the actual number of incidents being analyzed. These figures were calculated only from those incidents, which were coded as Unconfined fires (Incident Types 111-112 or 120-129). The USFA & NFPA do not recommend inferring codes for Factors Contributing to Ignition from the fires contained to non-combustible containers (Incident Types 113 – 118). This field does not need to be completed for confined fires.

⁹ This field does not need to be completed for confined fires. Certain codes are inferred from the Incident Type.

¹⁰ These figures were calculated only from those incidents, which were coded as Unconfined fires (Incident Types 111-112 or 120-129). The USFA & NFPA do not recommend inferring codes for Cause of Ignition from the fires contained to non-combustible containers (Incident Types 113 – 118). This field does not need to be completed for confined fires.

¹¹ This includes the fires that Pittsfield responded to outside of their jurisdiction as mutual aid given.

Bristol County Fires 2010

2010 Fires

MFIRS
Massachusetts Fire Incident Reporting System

Massachusetts Fire Incident Reporting System 2010

Bristol County Fires in 2010

2,013 Total Fires — 837 Structures, 301 Vehicles & 875 Other Fires

Bristol County ranked seventh out of the fourteen Massachusetts counties in total reported fires. The county reported 2,013 fires to the Massachusetts Fire Incident Reporting System (MFIRS) in 2010. The 837 structure fires, 301 motor vehicle fires, 421 brush, tree or lawn fires, 278 outside rubbish fires, 60 special outside fires, three cultivated vegetation or crop fires, and 113 other fires caused four civilian deaths, one fire service death, 44 civilian injuries, 36 fire service injuries and an estimated dollar loss of \$15.7 million. Bristol County's fires accounted for 6% of the 32,680 Massachusetts fires reported in 2010.

All 22, or 100%, of the fire departments in Bristol County reported incidents to the Massachusetts Fire Incident Reporting System (MFIRS).

Structure & Outside Fires Up

The total number of reported fire incidents increased by 219 from the 1,794 reported in 2009. Reported structure fires increased by 48 from the 789 reported during the previous year. The total number of reported motor vehicle fires dropped by eight from the 309 incidents reported during 2009. Reported outside and other fires increased by 179 from the 696 reported the year before.

Outside Fires Increase

Bristol County had a large increase in brush fires in 2010. Brush fires increased by 115, or 38%, from the 306 reported in 2009.

BRISTOL COUNTY FIRES FROM 2006 TO 2010

Year	Total Fires	Structure Fires	Vehicle Fires	Other Fires	Total Arsons	Structure Arsons	Vehicle Arsons	Other Arsons
2006	2,331	837	353	1,141	159	53	38	68
2007	2,517	789	353	1,375	139	32	28	79
2008	2,311	822	311	1,178	129	31	22	76
2009	1,794	789	309	696	140	55	19	66
2010	2,013	837	301	875	116	43	13	60

Fire and Fire Death Rates

Bristol County had 3.7 fires per 1,000 population. That figure ranks Bristol County twelfth in the state and below the state rate of 5.0 fires per 1,000 population. Bristol County also had 0.07 fire deaths per 10,000 populations ranking it tied for third among Massachusetts counties and above the state rate of 0.05 fire deaths per 10,000 population.

4 Fires Kill 4 Bristol County Residents

- On April 16, 2010, at 3:49 a.m., the Fall River Fire Department was called to a fatal cooking fire in a three-unit apartment building. Radiated heat from the stovetop

ignited the cooking liquids, starting the fire. The victim, a 4-year old girl, was asleep at the time of the fire. The victim's 23-year old mother received life-threatening injuries. Smoke detectors were present, but it was undetermined if they operated. The building was not sprinklered. Damages from this fire were estimated to be \$280,100.

- On June 14, 2010, at 4:07 a.m., the Taunton Fire Department was called to a fatal smoking fire in a single-family home. The victim, a 51-year old woman, fell asleep while smoking in bed. No one else was injured by this fire. Detectors were not present and the building was not sprinklered. Damages from the blaze were not estimated.
- On December 4, 2010, at 1:14 a.m., the Acushnet Fire Department was called to a motor vehicle accident with ensuing fire. The victim, a 46-year old male driver, was trapped inside the vehicle and had to be extricated. Two other civilian passengers were helped out of the vehicle by police and good samaritans. Damages were estimated to be \$40,500.
- On December 12, 2010, at 1:56 a.m., the Fall River Fire Department was called to a fatal fire smoking fire in a six-unit apartment building. The victim, an 80-year old woman, ignited her bedding after falling asleep while smoking. She was overcome by the heat and smoke of the fire while escaping. She was transported to a Rhode Island hospital where she later succumbed to her injuries. There were three other civilian injuries associated with this fire. It was undetermined if detectors were present in the building and there were no sprinklers. Damages from this fire were estimated to be \$170,000.

L.O.D.D. Rehoboth 11/25/10 - FF Kenneth Marshall Jr.

- On Thanksgiving Day, November 25, 2010, at 9:31 p.m., the Rehoboth Fire Department was dispatched to a cooking fire in a single-family home. FF Marshall while driving the engine that was responding, slumped over the wheel as he pulled out of the station. The other firefighters stopped the truck, pulled FF Marshall out of it and initiated emergency medical procedures in an attempt to revive him. He was transported to Sturdy Memorial Hospital where he was pronounced dead.

New Bedford Has Bristol County's Largest Loss Fire

- On June 6, 2010, at 6:32 p.m., the New Bedford Fire Department responded to a fire at a fisheries facility. Investigators were unable to determine the cause of the fire. No one was injured by this fire. Detectors were present and alerted the occupants. Sprinklers were not present. Damages were estimated to be \$1.3 million.

STRUCTURE FIRES

Reported Structure Fires Up

The 837 structure fires caused three civilian deaths, one fire service death, 36 civilian injuries, 33 fire service injuries and an estimated dollar loss of \$13.3 million. These

incidents represented 42% of Bristol County's reported fires in 2010. The average estimated dollar loss per structure fire was \$15,872. The total number of reported structure fires increased by 48, or 6%, from the 789 reported in 2009.

Structure Arsons Down

The 43 structure arsons caused two civilian injuries and an estimated dollar loss of \$1.9 million. Arson was indicated as the cause of 5% of the structure fires and 14% of Bristol County's structure fire dollar loss. The 43 structure arsons accounted for 37% of the Bristol County arson fires reported in 2010. The total number of reported structure arsons decreased by 12, or 22%, from 55 in 2009.

Almost 2/3 of Structure Arsons Occurred in Residences

Sixty-two percent (62%) of Bristol County's 43 structure arsons occurred in residential occupancies. Public assembly facilities and special properties each had 10% of these fires; 7% each happened in storage facilities and educational properties; and 2% each occurred in mercantile or business properties and manufacturing or processing facilities.

BUILDING FIRES

There were 827 building fires of different types in Bristol County in 2010. These 827 building fires accounted for 98.8% of all building fires in Bristol County.

Over 3/4 of Bristol Building Fires Occurred in People's Homes

Six hundred and forty-eight (648), or 78%, of Bristol County's 827 building fires occurred in residential occupancies. Forty-five (45) fires took place in public assembly properties, including restaurants and churches. Mercantile and business properties had 36 fires. Special properties had 24 fires. Twenty-four (24) fires took place in storage properties. Hospitals, prisons, and other institutional buildings experienced 19 fires. Eighteen (18) fires took place in manufacturing and processing facilities. Educational facilities had 11 fires. Two (2) fires occurred in industrial, utility, defense, agricultural or mining facilities in Bristol County in 2010.

RESIDENTIAL FIRES

Residential Building Fires Up Slightly

There were 648 reported residential building fires in Bristol County in 2010. These 648 fires are an increase of 28, or 5%, from the 620 residential building fires reported in 2009.

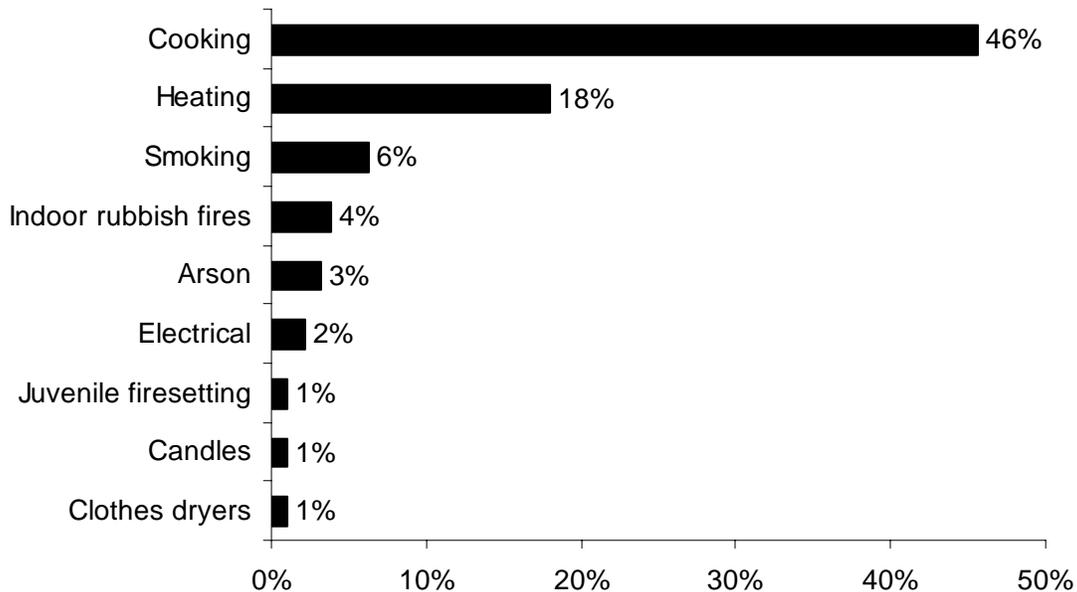

1- & 2-Family Homes Accounted for 1/2 of Residential Building Fires

The peak fixed property uses for residential building fires were 1- & 2-family homes, accounting for 50% of the building fires in Bristol County; 44% occurred in apartments; 3% happened in rooming houses; 1% occurred in residential board and care facilities, 1% occurred in dormitories and another 1% happened in hotels or motels. Six (6), or 1% of the residential building fires in Bristol County occurred in unclassified residential buildings.

Unsafe Cooking Leading Cause of Residential Fires

The leading cause of residential building fires in Bristol County was unattended cooking and other unsafe cooking practices, accounting for 46% of these fires. The second leading cause of residential building fires was heating equipment, accounting for 18%. Smoking caused 6% of the fires in people's homes. Indoor rubbish fires accounted for 4% of fires in residences. Arson was responsible for 3% of these fires. Electrical problems caused 2%; and juvenile-set fires, candles and clothes dryers each accounted for 1% of Bristol County's residential building fires in 2010.

2010 Leading Causes to Fires in Bristol County Homes

59% of Residential Building Fires Are Confined to Non-Combustible Containers¹

Three hundred and eighty (380), or 59%, of all residential building fires were reported as confined to non-combustible containers in 2010. Two hundred and fifty (250), or 39%, of all residential building fires reported in 2010 were cooking fires contained to a non-combustible container. Sixty-three (63), or 10%, were fires confined to a fuel burner or boiler malfunction. Forty-five (45) of the reported fires were confined to a chimney,

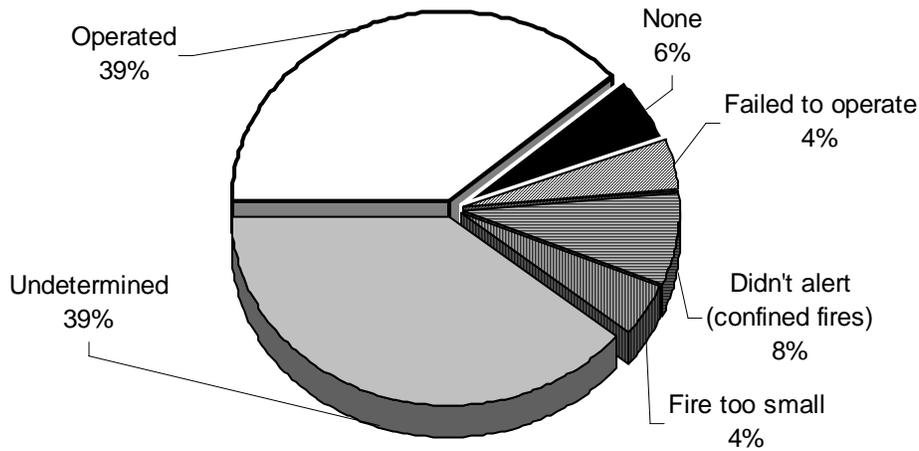

¹ In MFIRS v5 a fire in a building contained to a non-combustible container (Incident Type = 113-118) does not have to have a Fire Module completed. Therefore the following data fields do not need to be completed: Area of Origin, Detector Status, Item First Ignited, Heat Source, Factors Contributing to Ignition, Cause of Ignition, and Equipment Involved In Ignition. These incidents are not included in the analysis of these fields.

accounting for 7% of residential building fires. Twenty-two (22), or 3%, of these fires were rubbish fires contained to a non-combustible container in Bristol County in 2010.

Detectors Alerted Occupants in Over 1/3 of Fires

Smoke or heat detectors operated and alerted the occupants in 250, or 39%, of the residential building fires. In 8% of these fires², the detectors did not alert the occupants. Detectors were present but did not operate in 4% of these incidents. In 6% of these fires, no detectors were present at all. The fire was too small to trigger the detector in 4% of the residential fires. Smoke detector performance was undetermined in 254 incidents, or 39%, of Bristol County’s residential building fires.

Detector Status in Bristol County's Residential Structure Fires 2010

41% of Failed Detectors Had Dead or Missing Batteries

Of the 12 fires where smoke detectors were present but failed to operate, 10, or 34%, failed because the batteries were either missing or disconnected and two, or 7%, failed because of dead batteries. Five (5), or 17%, failed because of a power failure, shutoff or disconnect; and a lack of maintenance and a defective detector each caused one, or 3%, of the detectors that failed to operate. It was undetermined or unclassified in 10 cases, or 34%, why the detectors failed to operate.

² These represent confined fires where it was reported that the detector did not alert the occupants.

VACANT BUILDINGS

5% of Building Fires Occurred in Vacant Buildings

Bristol County reported 43 fires that occurred in buildings that were vacant, under construction or demolition³. This represented 5% of the total 827 building fires reported to MFIRS in 2010. Twenty-two (22) fires occurred in vacant residential properties. Eight (8) vacant building fires occurred in storage facilities. Five (5) of these fires happened in public assembly properties. Mercantile and business properties had four of these fires, and special properties accounted for three vacant building fires. An educational facility had one vacant building fire incident in Bristol County in 2010.

Thirteen (13), or 30%, of the vacant building fires in Bristol County in 2010 were determined to be intentionally set. Five (5) occurred in apartment buildings and two occurred in warehouses. One (1) each occurred at a unclassified public assembly facility, a church, an unclassified place of worship, a clothing store, an unclassified special property and an unclassified property.

JUVENILE-SET FIRES

12 Juvenile-set Fires

There were 12 reported juvenile-set fires in Bristol County in 2010. The seven structure fires, three brush fires and two unclassified fires caused one civilian injury and \$257,500 in estimated damages.

ARSONS

116 Total Arsons⁴ — 43 Structures, 13 Vehicles & 60 Other Arsons

Bristol County fire departments reported that 116, or 6%, of Bristol County's 2,013 fires were considered intentionally set, or, for purposes of this analysis, arson. The 43 structure arsons, 13 motor vehicle arsons and 60 outside and other arsons caused two civilian injuries and an estimated dollar loss of \$1.9 million.

All Arsons Down

The total number of reported arson fires decreased by 24 from the 140 reported in 2009. Structure arsons increased by 12, or 22%, from the 55 reported in 2009. Motor vehicle arsons decreased by six from the 19 reported last year. Outside and other arsons dropped by six from the 66 reported in 2009.

³ In version 4 a vacant building was defined by having a Fixed Property Use code in the subsection of construction, unoccupied properties, between 910 & 919. However in version 5, the Property Use is separate from the Building Status. In v5 a building is considered vacant if the Building Status is coded: 1- Under Construction; 3-Idle, not routinely used; 4-Under major renovation; 5-Vacant, secured; 6-Vacant, unsecured; & 7-Being demolished. The building use is coded separately in the Property Use field.

⁴ In MFIRS v5 a fire is considered an arson if the Cause of Ignition = 1 (Intentional) and the Age of Person (Fire Module) is greater than 17 or if the field is blank; or if the Wildland Module is used, the Wildland Fire Cause = 7 (Incendiary) and the Age of the Person (Wildland Module) is greater than 17 or if the field is left blank.

ALL INCIDENTS

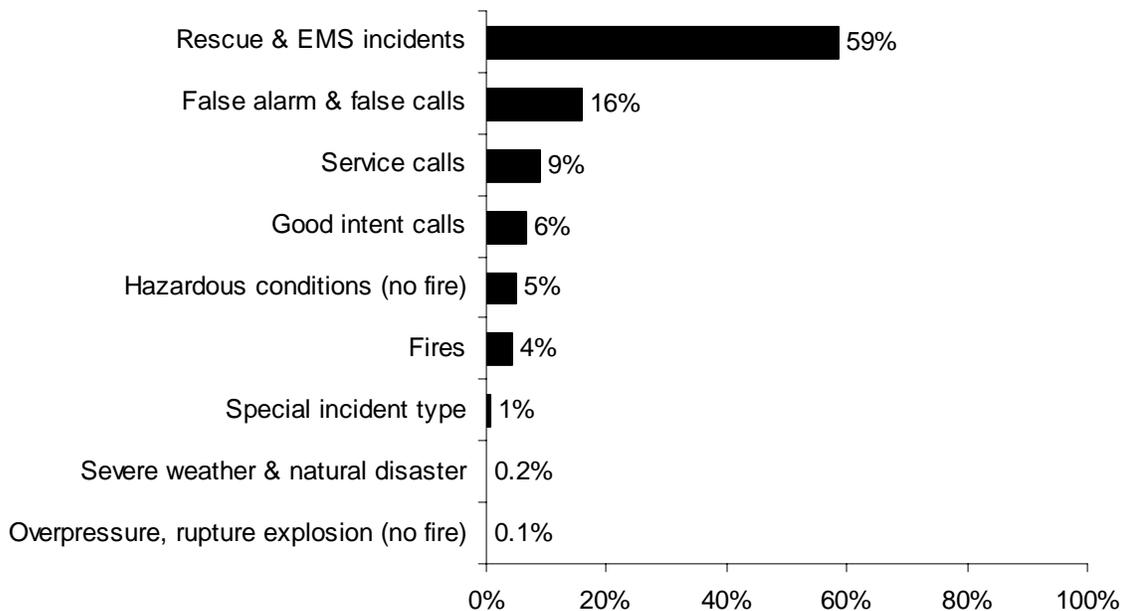

Rescue & EMS Calls Are 59% of All Reported Responses

In 2010, fire departments in Bristol County reported 49,946 responses⁵ to MFIRS. Of these 49,946 incidents, 47,821 non-fire calls were voluntarily reported.

Of these 47,821 non-fire calls, 29,243, or 59% of all the reported responses, were reported rescue and emergency medical services (EMS) calls; 7,944, or 16%, were reported false alarm or false calls; 4,452, or 9%, were reported service calls such as lock-outs, water or smoke problems, unauthorized burning or public service assistance; 3,232, or 6%, were reported good intent calls; 2,504, or 5%, were reported hazardous condition calls with no fire; 280, or 1%, were special incident type calls such as citizen complaints; 108, or 0.2%, were severe weather responses; and 58, or 0.1%, were reported overpressure, rupture, explosion or overheat calls with no fire.

Two thousand one hundred and twenty-five (2,125), or 4%, of the total responses submitted by Bristol County fire departments were fires.

2010 Responses by Incident Type

⁵ These figures include responses in which Bristol County fire departments gave mutual aid to other fire departments.

Bristol County Fire Departments Gave Mutual Aid 1,267 Times

In 2010, Bristol County fire departments reported coming to the aid of other fire departments 1,267 times. Of these 1,267 responses, 993, or 78%, were for rescue or EMS calls; 105, or 8%, were for service calls such as cover assignments; 83, or 7%, were for good intent calls; 55, or 4%, were for fires; 13, or 1%, were for false alarms or false calls; 10, or 1%, were for hazardous conditions calls with no fire; and eight, or 1%, were special incident types.

Bristol County Received Mutual Aid in 948 Incidents

In 2010, Bristol County fire departments reported receiving aid from surrounding departments in 948 incidents. Of these 948 incidents, 818, or 86%, were rescue and emergency medical services calls; 66, or 7%, were for fires; 19, or 2%, were false alarms or false calls; 15, or 2%, were hazardous conditions calls with no fire; 14, or 1%, were good intent calls; 12, or 1%, were service calls; two, or 0.2%, were severe weather calls; and overpressure, rupture, explosion or overheat calls, and special incident types each reported one, or 0.1%, of the mutual aid given calls.

Living room	3%	Hot ember or ash	3%	6%

⁶ This field does not need to be completed for confined fires. Certain codes are inferred from the Incident Type.

⁷ These figures were calculated only from those incidents, which were coded as Unconfined fires (Incident Types 111-112 or 120-129). The USFA & NFPA do not recommend inferring codes for Heat Source from the fires contained to non-combustible containers (Incident Types 113 – 118). This field does not need to be completed for confined fires, but is sometimes voluntarily reported.

⁸ This field does not need to be completed for confined fires. Certain codes are inferred from the Incident Type.

⁹ Some fields in version 5 allow for multiple entries. Therefore the number of entries may be greater than the actual number of incidents being analyzed. These figures were calculated only from those incidents, which were coded as Unconfined fires (Incident Types 111-112 or 120-129). The USFA & NFPA do not recommend inferring codes for Factors Contributing to Ignition from the fires contained to non-combustible containers (Incident Types 113 – 118). This field does not need to be completed for confined fires.

¹⁰ This field does not need to be completed for confined fires. Certain codes are inferred from the Incident Type.

¹¹ These figures were calculated only from those incidents, which were coded as Unconfined fires (Incident Types 111-112 or 120-129). The USFA & NFPA do not recommend inferring codes for Cause of Ignition from the fires contained to non-combustible containers (Incident Types 113 – 118). This field does not need to be completed for confined fires.

Fall River Fires in 2010

508 Total Fires — 273 Structures, 59 Vehicles & 176 Other Fires

The Fall River Fire Department reported 508 fires to the Massachusetts Fire Incident Reporting System (MFIRS) in 2010. The 273 structure fires, 59 motor vehicle fires, 69 brush fires, 68 trash fires, 12 special outside fires, one cultivated crop or orchard fire, and 26 unclassified fires caused two civilian deaths, 18 civilian injuries, 11 fire service injuries and an estimated dollar loss of \$5.5 million.

2 Fall River Residents Killed in 2 Fatal Fires

- On April 16, 2010, at 3:49 a.m., the Fall River Fire Department was called to a fatal cooking fire in a three-unit apartment building. Radiated heat from the stovetop ignited the cooking liquids, starting the fire. The victim, a 4-year old girl was asleep at the time of the fire. The victim's 23-year old mother received life-threatening injuries. Smoke detectors were present but it was undetermined if they operated. The building was not sprinklered. Damages from this fire were estimated to be \$280,100.
- On December 12, 2010, at 1:56 a.m., the Fall River Fire Department was called to a fatal fire smoking fire in a six-unit apartment building. The victim, an 80-year old woman, ignited her bedding after falling asleep while smoking. She was overcome by the heat and smoke of the fire while escaping. She was transported to a Rhode Island hospital where she later succumbed to her injuries. There were three other civilian injuries associated with this fire. It was undetermined if detectors were present in the building and there were no sprinklers. Damages from this fire were estimated to be \$170,000.

All Fires Up

Total fires increased by 119, or 37%, from the 389 fires reported in 2009. Reported structure fires increased by 74 from the 199 reported during the previous year. Motor vehicle fires increased by two from 57 the year before. Outside and other fires increased by 43 from 133 the year before.

FALL RIVER FIRES FROM 2006 TO 2010

	Total Fires	Structure Fires	Vehicle Fires	Other Fires	Total Arsons	Structure Arsons	Vehicle Arsons	Other Arsons

2007	589	245	56	288	35	13	4	18
2008	472	232	65	175	20	7	3	10
2009	389	199	57	133	33	18	2	13
2010	508	273	59	176	35	17	2	16

BUILDING FIRES

There were 269 building fires of different types in Fall River in 2010. These 269 building fires accounted for 98.5% of all structure fires in Fall River.

81% of Building Fires in Homes

The 269 building fires that occurred in Fall River in 2010 can be broken down by fixed property use as follows: 217, or 81% of all structure fires, were in residential properties; 12 happened in each at public assembly properties; nine occurred in institutional facilities; nine fires took place in a special properties; seven fires happened in storage facilities; six occurred in mercantile or business properties; another six fires occurred in manufacturing or processing facilities; two fires happened in educational facilities; and one fire occurred in an industrial facility.

RESIDENTIAL FIRES

Residential Building Fires Are Up

There were 217 reported residential building fires in Fall River in 2010. These 217 residential building fires are an increase of 61, or 39%, from the 156 reported in 2009.

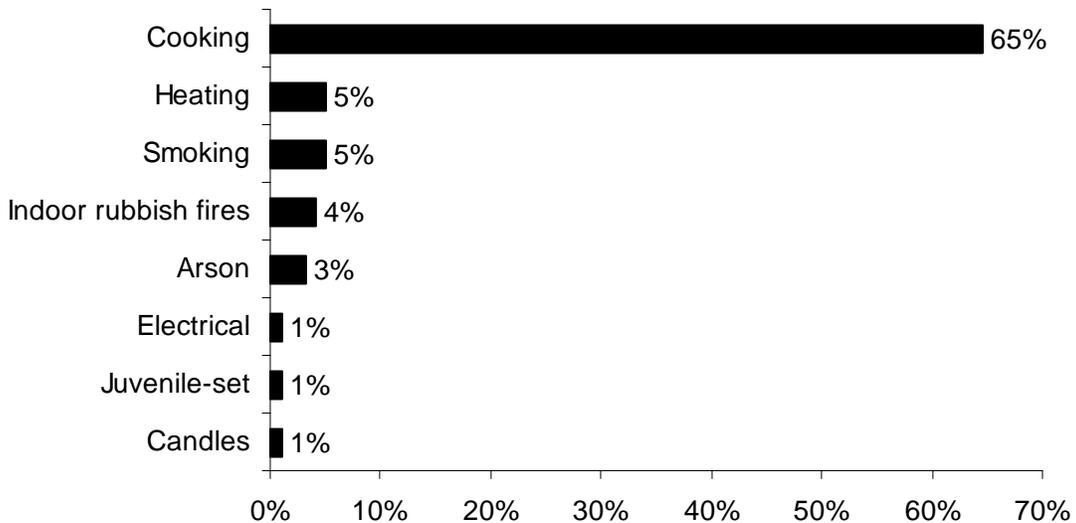

Apartments Accounted for Almost 3/4 of Residential Building Fires

The peak fixed property uses for residential building fires in Fall River were apartments, accounting for 71% of the residential building fires. Twenty-two percent (22%) occurred in 1- or 2-family homes; 4% occurred in rooming houses; 1% happened in residential board and care facilities; and less than 1% occurred each in dormitories, hotels or motels. Less than 1% of these fires also occurred in unclassified residential properties.

Unattended Cooking Leading Cause of Residential Fires

The leading cause of residential building fires in Fall River was unattended cooking and other unsafe cooking practices, accounting for 65% of these fires. Heating equipment fires and smoking each caused 5% of these fires. Indoor rubbish fires accounted for 4% of residential fires. Arson accounted for 3% of fires in residential occupancies. Electrical

2010 Leading Causes of Fires in Fall River Homes

problems, juvenile-set fires and candles each accounted for 1% of the fires in people’s homes in Fall River in 2010.

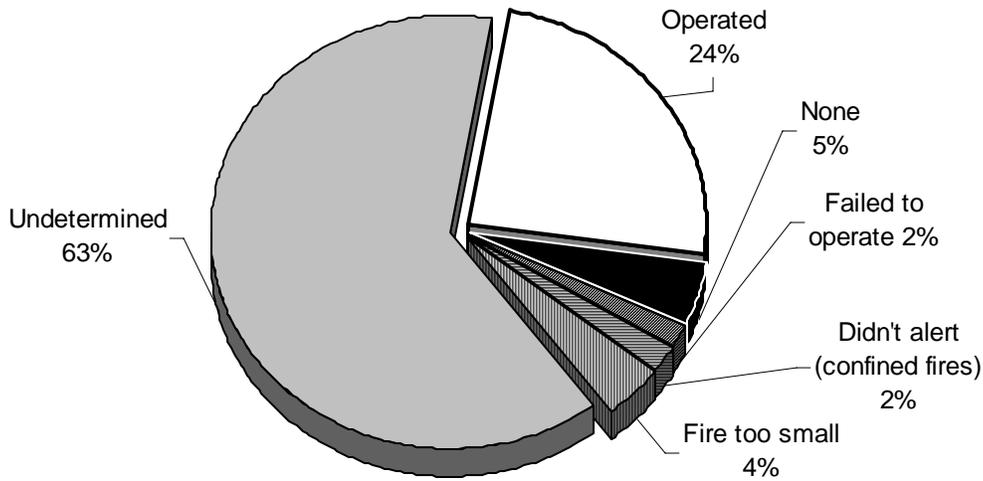

65% of Residential Building Fires Are Confined to Non-Combustible Containers¹

One hundred and forty-one (141), or 65% of all residential building fires were confined to non-combustible containers in 2010. One hundred and twenty-seven (127), or 59%, of all residential building fires reported in 2010 were cooking fires contained to a non-combustible container. Seven (7), or 3%, were fires confined to a fuel burner or boiler malfunction. Five (5), or 2%, of these fires were rubbish fires contained to a non-combustible container. There were two reported fires confined to a chimney or flue, accounting for 1% of the residential building fires in Fall River in 2010.

Detectors Operation Undetermined in Almost 2/3 of Fires

Smoke or heat detectors operated and alerted the occupants in 53, or 24%, of the residential building fires. In 2% of these fires², the detectors did not alert the occupants. Detectors were present but did not operate in 2% of these incidents. In 5% of these fires, no detectors were present at all. The fire was too small to trigger the detector in 4% of the residential fires. Smoke detector performance was undetermined in 137 incidents, or 63% of Fall River’s residential building fires.

Detector Status in Fall River's Residential Fires 2010

¹ In MFIRS v5 a fire in a building contained to a non-combustible container (Incident Type = 113-118) does not have to have a Fire Module completed. Therefore the following data fields do not need to be completed: Area of Origin, Detector Status, Item First Ignited, Heat Source, Factors Contributing to Ignition, Cause of Ignition, and Equipment Involved In Ignition. These incidents are not included in the analysis of these fields.

² These represent confined fires where it was reported that the detector did not alert the occupants.

The lack of data on smoke detector performance in confined fires does not present a true picture of functioning smoke alarms in Fall River. Improved collection of data on whether or not the smoke alarms alerted the occupants to the fire would provide a better understanding of this issue.

2 of 4 Detectors Failed Because of Missing Batteries

Two of the four detectors that were reported to have failed, didn't work because the battery was missing. Another detector failed because of a power failure, shut-off or disconnect. It was undetermined why the other detector was reported to have failed.

VACANT BUILDING FIRES

4% of Building Fires Occurred in Vacant Buildings

Fall River reported eight fires that occurred in buildings that were vacant, under construction or demolition³. This represented 4% of the total 269 building fires reported to MFIRS in 2010. Three (3) single-family homes, three warehouses and a motor vehicle or boat sales or service facility, an unclassified public assembly structure, and two unclassified properties were reported as vacant building fire incidents.

JUVENILE-SET FIRES

There were three reported juvenile-set fires in Fall River in 2010. All three fires were building fires.

ARSONS

35 Total Arsons⁴ — 16 Structures, 1 Motor Vehicle, & 12 Other

Thirty-five (35), or 6%, of Fall River's 508 fires were considered intentionally set, or, for purposes of this analysis, arson. The 17 structure arsons, two motor vehicle arsons and 16 outside and other arsons caused two fire service injuries and an estimated dollar loss of \$1.8 million.

All Arsons Up Slightly

The total number of arsons increased by two from 33 in 2009. Reported structure arsons decreased by one from the 18 reported the year before. Motor vehicle arsons remained the same with two reported in both 2010 as well as in 2009. Outside and other arsons increased by three from the 13 reported in 2009.

³ In version 4 a vacant building was defined by having a Fixed Property Use code in the subsection of construction, unoccupied properties, between 940 & 949. However in version 5, the Property Use is separate from the Building Status. In v5 a building is considered vacant if the Building Status is coded: 1- Under Construction; 3-Idle, not routinely used; 4-Under major renovation; 5-Vacant, secured; 6-Vacant, unsecured; & 7-Being demolished. The building use is coded separately in the Property Use field.

⁴ In MFIRS v5 a fire is considered an arson if the Cause of Ignition = 1 (Intentional) and the Age of Person (Fire Module) is greater than 17 or if the field is blank; or if the Wildland Module is used, the Wildland Fire Cause = 7 (Incendiary) and the Age of the Person (Wildland Module) is greater than 17 or if the field is left blank.

ALL INCIDENTS

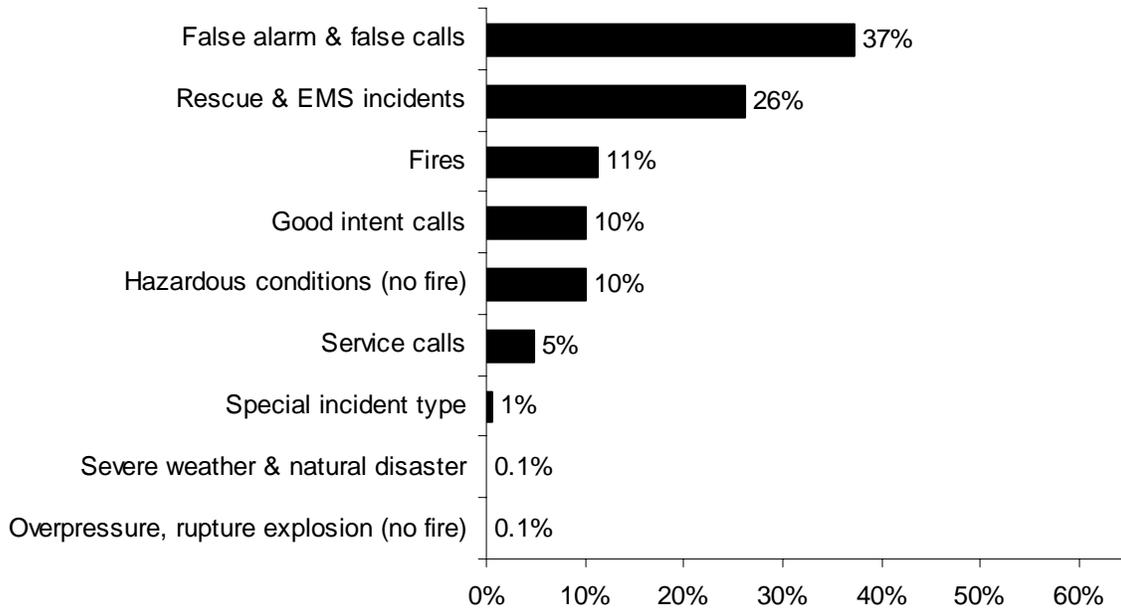

False Alarm & False Calls Are 37% of All Reported Incidents

In 2010, Fall River voluntarily reported 4,757 incidents to MFIRS. Of these 4,757 incidents, 4,225, or 89%, were non-fire incidents.

Of these 4,225 non-fire incidents 1,772, or 37% of all reported incidents in 2010, were reported false alarm or false calls; 1,240, or 26%, were reported rescue and emergency medical services (EMS) calls; 485, or 10%, were reported good intent calls; 458, or 10%, were reported hazardous condition calls with no fire; 234, or 5%, were reported service calls such as lock-outs, water or smoke problem, unauthorized burning or public service assistance; 28, or 1%, were special incident type calls; five, or 0.1%, were reported overpressure, rupture, explosion or overheat calls with no fire; and three, or 0.1% were severe weather or natural disaster calls.

In 2010, Fall River reported 532 fires⁵, accounting for 11% of all reported incidents.

2010 Incidents by Incident Type

Fall River Gave Mutual Aid in 10 Reported Incidents

In 2010, Fall River reported coming to the aid of other fire departments 10 times. Four (4) were for cover assignments; two were for fires; and one each were rescue or EMS call, false alarm or false call, good intent call and a special incident type.

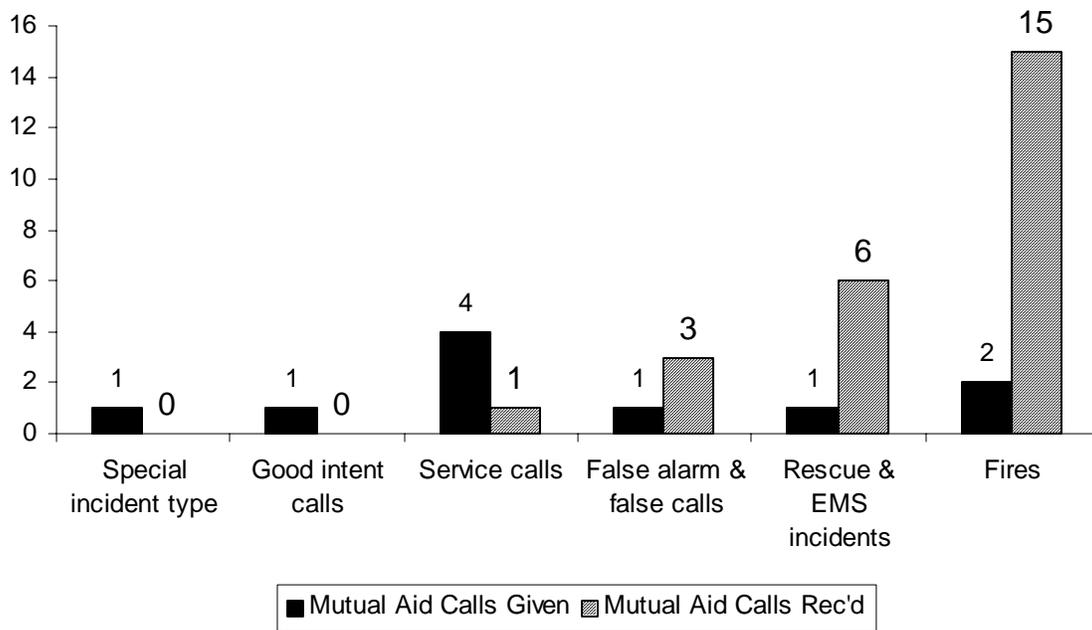

⁵ This figure includes the fires that Fall River responded to outside of their jurisdiction.

Fall River Received Mutual Aid 25 Times

In 2010, Fall River reported receiving mutual aid from surrounding fire departments 25 times. Fifteen (15) were for fires. Six (6) were for medical assists; three were for false alarms; and one was for a service call.

The following chart compares the number of calls that the Fall River Fire Department gave mutual aid to a neighboring community compared to the number of calls that a neighboring community assisted Lynn. In 2010 Fall River received aid from other fire departments two and a half times as much as they gave it.

New Bedford Fires in 2010

386 Total Fires —156 Structures, 76 Vehicles & 154 Other Fires

The New Bedford Fire Department reported 386 fires to the Massachusetts Fire Incident Reporting System (MFIRS) in 2010. The 156 structure fires, 76 motor vehicle fires, 85 outside trash fires, 40 brush fires, 11 special outside fires, and 18 unclassified fires caused 12 civilian injuries, 17 fire service injuries, and an estimated dollar loss of \$3.6 million. There were no fire deaths in New Bedford in 2010

Motor Vehicle & Outside & Other Fires Up

Total fires increased by 43 from the 343 reported in 2009. Reported structure fires decreased by 16 from the 172 reported during the previous year. Motor vehicle fires increased by 11 from the 65 fires reported in 2009. Outside and other fires increased by 48 from 106 the previous year.

NEW BEDFORD FIRES FROM 2006 TO 2010

	Total Fires	Structure Fires	Vehicle Fires	Other Fires	Total Arsons	Structure Arsons	Vehicle Arsons	Other Arsons

2008	453	165	65	223	47	16	14	17
2009	343	172	65	106	32	14	9	9
2010	386	156	76	154	27	11	9	7

BUILDING FIRES

There were 155 building fires of different types in New Bedford in 2010. These 155 building fires accounted for 99.4% of all structure fires in New Bedford.

84% of Building Fires in Homes

The 155 building fires that occurred in New Bedford in 2010 can be broken down by fixed property use as follows: 130, or 84% of all building fires, were in residential properties; eight fires took place in mercantile or business properties; six fires occurred in public assembly properties; five fires occurred in special properties; four fires happened in manufacturing and processing facilities; one fire occurred in an institutional property; and one fire happened in an educational facility in 2010.

RESIDENTIAL FIRES

Apartments Accounted for 62% of Residential Building Fires

The peak fixed property uses for residential building fires were apartments, accounting for 62% of the building fires in New Bedford; 31% occurred in 1- or 2-family homes; 4%, happened in rooming houses; 2% occurred in residential board and care facilities; 1% happened in dormitories; and another 1% occurred in hotels or motels.

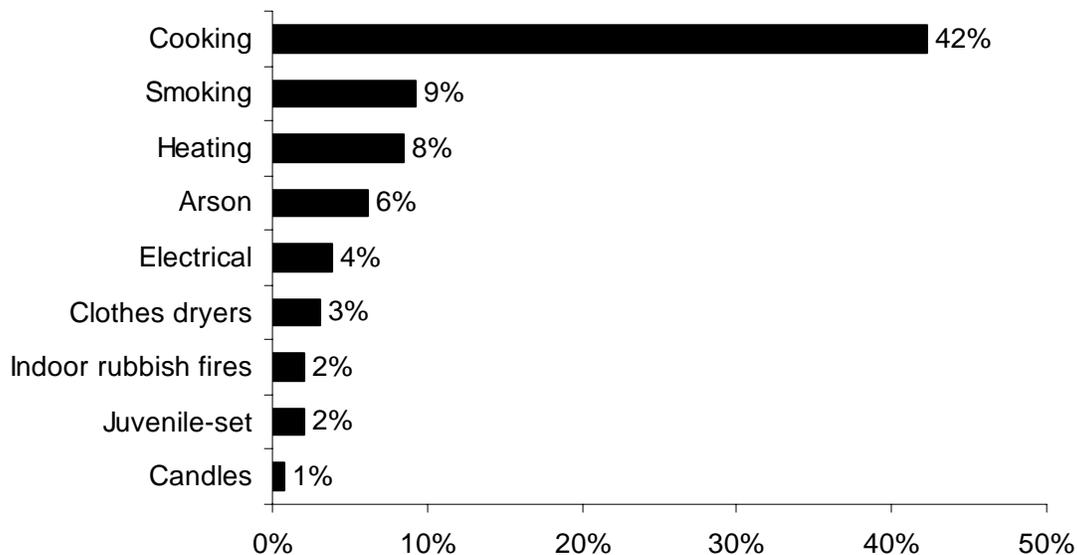

Residential Building Fires Are Down Slightly

There were 130 reported residential building fires in New Bedford in 2010. These 130 fires are a decrease of five, or 4%, from the 135 residential building fires reported in 2009.

Unattended Cooking Leading Cause of Residential Fires

The leading cause of residential building fires in New Bedford was unattended cooking and other unsafe cooking practices, accounting for 42% of these fires. Smoking caused 9% and heating problems accounted for 8% of residential fires. Arson caused 8% of the fires in New Bedford homes. Electrical problems accounted for 4% of these fires. Clothes dryers caused 3% of these fires. Indoor rubbish fires and juvenile-set fires each accounted for 2%; and candles caused 1% of the residential building fires in New Bedford in 2010.

2010 Leading Causes of Fires in New Bedford Homes

38% of Residential Building Fires Are Confined to Non-Combustible Containers¹

Fifty (50), or 38% of all residential building fires were confined to non-combustible containers in 2010. Thirty-eight (38), or 29%, of all residential building fires reported in 2010 were cooking fires contained to a non-combustible container. Eight (8) of the reported fires were fuel burner or boiler malfunctions, accounting for 6% of residential

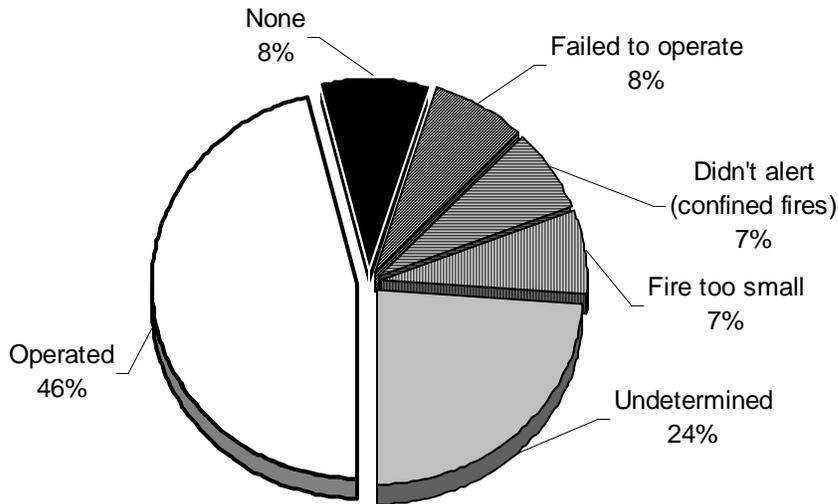

¹ In MFIRS v5 a fire in a building contained to a non-combustible container (Incident Type = 113-118) does not have to have a Fire Module completed. Therefore the following data fields do not need to be completed: Area of Origin, Detector Status, Item First Ignited, Heat Source, Factors Contributing to Ignition, Cause of Ignition, and Equipment Involved In Ignition. These incidents are not included in the analysis of these fields.

building fires in New Bedford in 2010. Two (2) of the reported fires were confined to a chimney or flue, accounting for 2% of residential building fires in New Bedford in 2010. Another two, or 2%, of these fires were rubbish fires contained to a non-combustible container.

Detectors Alerted Occupants in Almost 1/2 of Fires

Smoke or heat detectors operated and alerted the occupants in 60, or 46%, of the residential building fires. In 7% of these fires², the detectors did not alert the occupants. Detectors were present but did not operate in 8% of these incidents. In 8% of these fires, no detectors were present at all. The fire was too small to trigger the detector in 7% of the residential fires. Smoke detector performance was undetermined in 31 incidents, or 24% of New Bedford’s residential building fires.

Detector Status in New Bedford's Residential Fires 2010

3 of 10 Detectors Failed Detectors From a Missing or Disconnected Battery

Of the 10 fires where smoke detectors were present but failed to operate, three, or 30%, of these detectors failed because they were missing or had a disconnected battery. Another three detectors, or 30%, failed because of a power failure, shut-off or disconnect. A dead battery, a defective detector, and a lack of maintenance each caused one detector, or 10%, to fail. It was undetermined in the one case, or 10%, why the detectors failed to operate.

² These represent confined fires where it was reported that the detector did not alert the occupants.

VACANT BUILDINGS

8% of Building Fires Occurred in Vacant Buildings

New Bedford reported 12 fires that occurred in buildings that were vacant, under construction or demolition³. This represented 8% of the total 155 building fires reported to MFIRS in 2010. Four (4) fires in one- or two-family homes; two fires in apartment buildings; and one fire each in a clothing store, a church, a commercial hotel or motel, a restaurant, a bar, and an unclassified business occurred in vacant buildings.

JUVENILE-SET FIRES

2 Juvenile-set Fires

There were two reported juvenile-set fires in New Bedford in 2010. The two structure fires caused \$50,500 in estimated damages.

ARSONS

27 Total Arsons⁴ — 11 Structures, 9 Motor Vehicles & 7 Other

Twenty-seven (27), or 7%, of New Bedford's 386 fires were intentional, or for purposes of this analysis, arson. The 11 structure arsons, nine motor vehicle arsons and seven outside and other arsons caused an estimated dollar loss of \$86,100.

All Arsons Down

The total number of arsons decreased by five from the 32 reported in 2009. Reported structure arsons decreased by three from 14 the year before. Motor vehicle arsons remained the same with nine reported in both 2010 and 2009. Outside and other arsons decreased by two from the nine reported last year.

ALL INCIDENTS

Rescue & EMS Calls Were Over 2/3 of All Reported Incidents

In 2010, New Bedford voluntarily reported 10,420 incidents to MFIRS. Of these 10,420 incidents, 10,008, or 96%, were non-fire incidents.

Of these 10,008 non-fire incidents 7,093, or 68% of all reported incidents in 2010, were reported rescue and emergency medical services (EMS) calls; 1,510, or 14%, were reported false alarm or false calls; 757, or 7%, were reported good intent calls; 316, or 3%, were reported hazardous condition calls with no fire; 310, or 3%, were reported

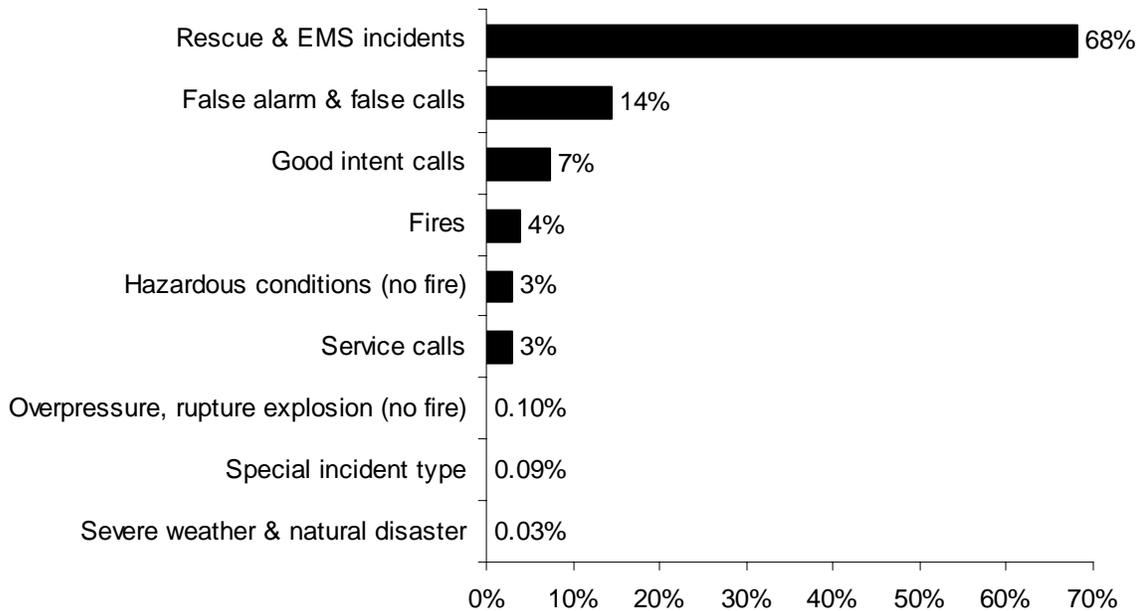

³ In version 4 a vacant building was defined by having a Fixed Property Use code in the subsection of construction, unoccupied properties, between 910 & 919. However in version 5, the Property Use is separate from the Building Status. In v5 a building is considered vacant if the Building Status is coded: 1- Under Construction; 3-Idle, not routinely used; 4-Under major renovation; 5-Vacant, secured; 6-Vacant, unsecured; & 7-Being demolished. The building use is coded separately in the Property Use field.

⁴ In MFIRS v5 a fire is considered an arson if the Cause of Ignition = 1 (Intentional) and the Age of Person (Fire Module) is greater than 17 or if the field is blank; or if the Wildland Module is used, the Wildland Fire Cause = 7 (Incendiary) and the Age of the Person (Wildland Module) is greater than 17 or if the field is left blank.

service calls such as lock-outs, water or smoke problem, unauthorized burning or public service assistance; 10, or 0.1%, were reported overpressure, rupture, explosion or overheat calls with no fire; nine, or 0.09%, were special incident type calls such as citizen complaints; and three, or 0.03%, were severe weather calls.

In 2010, New Bedford reported 412 fires⁵, accounting for 4% of all reported incidents.

2010 Incidents by Incident Type

New Bedford Gave Mutual Aid in 7 Reported Incidents

In 2010, New Bedford reported coming to the aid of other fire departments seven times. Three (3), or 43%, were for fires. Another three, or 43%, were rescue or EMS calls; and one, or 14%, was for a station coverage call.

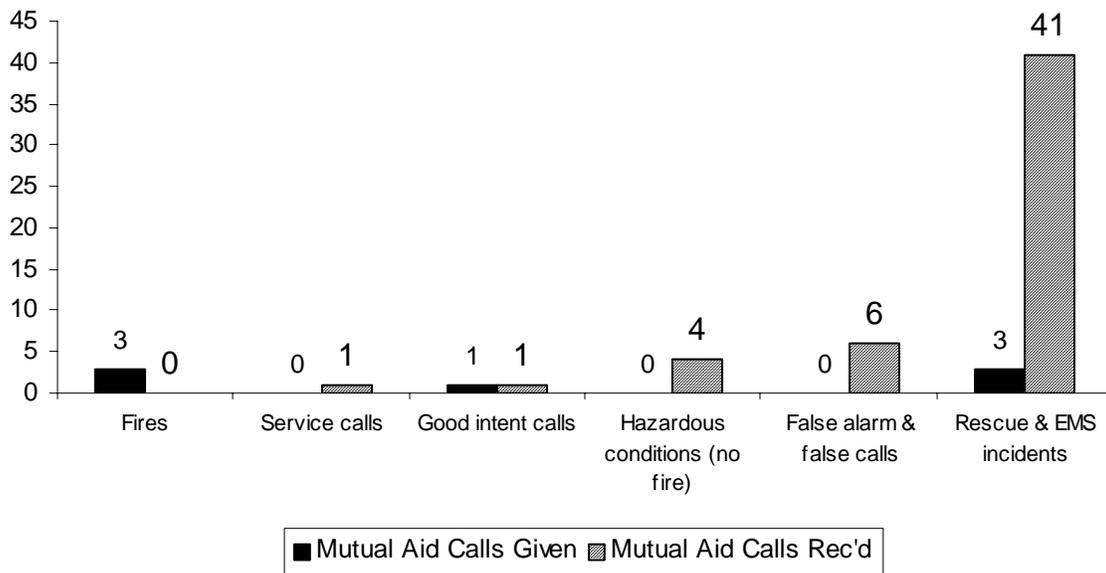

New Bedford Received Mutual Aid in 53 Incidents

In 2010, New Bedford reported receiving aid from surrounding fire departments 53 incidents. Forty-one (41), or 77%, of these incidents were rescue or EMS calls; six, or 11%, were false alarm or false calls; four, or 8%, were for hazardous condition calls with no fire; one, or 2%, was a service call; and one, or 2%, was a good intent call.

⁵ This figure includes mutual aid fires that New Bedford responded to outside of their jurisdiction.

The following chart compares the number of calls that the New Bedford Fire Department gave mutual aid to a neighboring community compared to the number of calls that a neighboring community assisted New Bedford. In 2010 New Bedford received aid from other fire departments over seven and a half times as much as they were gave it.

Dukes County Fires 2010

2010 Fires

Dukes County Fires in 2010

28 Total Fires — 15 Structures, 5 Vehicles Fires & 8 Outside & Other Fires

Dukes County ranked last out of the fourteen Massachusetts counties in total fires. Dukes County fire departments reported 28 fires to the Massachusetts Fire Incident Reporting System (MFIRS) in 2010. The 15 structure fires, five motor vehicle fires, one brush, tree or lawn fire, four outside rubbish fires, and three unclassified fires caused two civilian deaths and an estimated dollar loss of \$25,050. Dukes County's fires accounted for 0.1% of the 32,680 Massachusetts fires reported in 2010.

All seven of the fire departments in Dukes County either reported incidents to the Massachusetts Fire Incident Reporting System (MFIRS) or certified that they had no reportable fires in 2010.

All Fires Up

The total number of reported fire incidents increased by nine from the 19 reported in 2009. Reported structure fires increased by seven from the eight reported in 2009. Motor vehicle fires remained the same with five reported in both 2009 and 2010. Outside and other fires increased by two from the six reported in 2009.

DUKES COUNTY FIRES FROM 2006 TO 2010

Year	Total Fires	Structure Fires	Vehicle Fires	Other Fires	Total Arsons	Structure Arsons	Vehicle Arsons	Other Arsons
2006	38	18	7	13	2	0	0	2
2007	35	22	3	10	0	0	0	0
2008	19	12	3	4	0	0	0	0
2009	19	8	5	6	0	0	0	0
2010	28	15	5	8	1	0	1	0

Fire and Fire Death Rates

Dukes County had 1.7 fires per 1,000 population. That figure ranks Dukes County last in the state and below the state rate of 5.0 fires per 1,000 population. Dukes County also had 1.21 fire deaths per 10,000 population ranking it first among Massachusetts counties and above the state rate of 0.06 fire deaths per 10,000 population.

2 Residents Died in 2 Dukes County Fires

- On January 30, 2010, at 5:05 a.m., the West Tisbury Fire Department responded to a heating equipment fire at a single-family home. The fire was caused by the boiler. The victim was a 63-year old man who was also a call firefighter on the department. It was undetermined if there were detectors and the home was not sprinklered. No estimation was made for damages from this fire.
- On February 1, 2010, at 5:44 p.m., the Oak Bluffs Fire Department was dispatched to a single car motor vehicle accident with ensuing fire. The vehicle left the road and

continued into a patch of woods near the entrance to the Martha's Vineyard Hospital's emergency department. The victim, a 37-year old woman, was trapped inside the vehicle and unable to extricate herself. No one else was injured in this fire. Damages from this fire were not estimated.

Gosnold Had Dukes County Largest Loss Fire

- On April 9, 2010, at 8:45 p.m., the Gosnold Fire Department discovered one of its older fire trucks on fire at the fire station. No one was injured at this fire and damages were estimated to be \$14,500.

STRUCTURE FIRES

Reported Structure Fires Up

There were 15 reported structure fires in Dukes County in 2010. These incidents represented 54% of Dukes County's reported fires in 2010 and 42% of the county's reported dollar loss. The total number of reported structure fires increased by seven, or 88%, from the eight reported in 2009.

No Reported Structure Arsons in 2010

There were no reported structure arsons in Dukes County in 2010. The last reported structure arson in Dukes County occurred in 2003.

BUILDING FIRES

There were 14 building fires of different types in Dukes County in 2010. These 14 building fires accounted for 93.3% of the structure fires in Dukes County.

86% of Dukes Building Fires Occurred in People's Homes

Twelve (12), or 86%, of Dukes County's 14 building fires occurred in residential occupancies. One fire occurred in a business and another fire occurred in a storage facility.

RESIDENTIAL FIRES

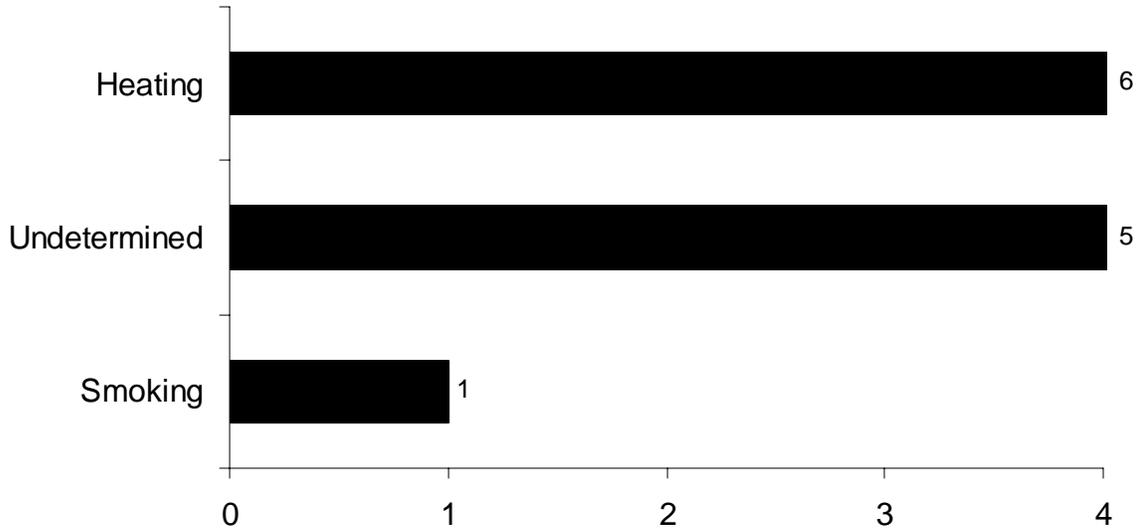

Residential Building Fires Up

There were 12 reported residential building fires in Dukes County in 2010. These 12 fires are an increase of five, or 71%, from the seven residential building fires reported in 2009.

Heating Was the Leading Cause of Residential Fires

Heating was the leading cause of residential building fires in Dukes County, accounting for six, or 50%, of these fires. Smoking caused one of the residential building fires in Dukes County in 2010, accounting for 8% of the fires. The cause was undetermined for five, or 42%, of the fires in Dukes County in 2010.

2010 Leading Causes of Fires in Dukes County Homes

5 Residential Building Fires Are Confined to Non-Combustible Containers¹

Five (5), or 42%, of the reported fires in Dukes County were confined to a non-combustible container. All five of these fires, or 100%, were confined to a chimney or flue.

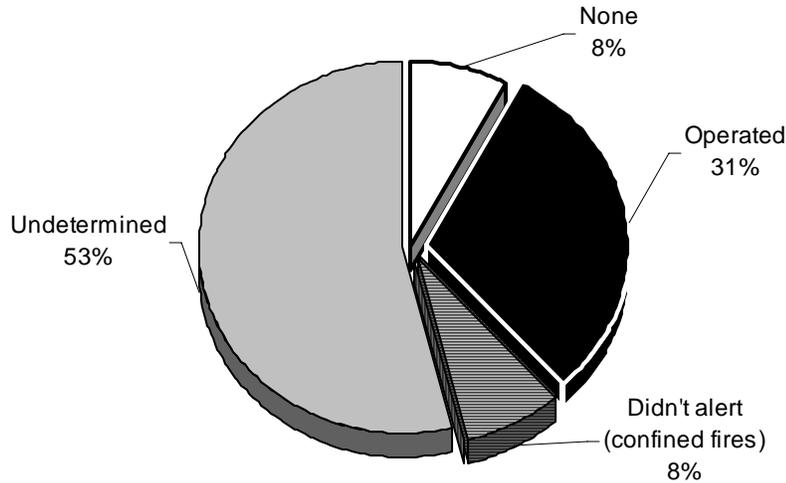

Detectors Status Undetermined in Over 1/2 of Fires

Smoke or heat detectors operated and alerted the occupants in four, or 31%, of the residential building fires. In one, or 8%, of these fires², the detectors did not alert the occupants. In another fire, or 8%, there were no smoke detectors present. Smoke detector performance was undetermined in seven incidents, or 53%, of Dukes County's residential building fires.

¹ In MFIRS v5 a fire in a building contained to a non-combustible container (Incident Type = 113-118) does not have to have a Fire Module completed. Therefore the following data fields do not need to be completed: Area of Origin, Detector Status, Item First Ignited, Heat Source, Factors Contributing to Ignition, Cause of Ignition, and Equipment Involved In Ignition. These incidents are not included in the analysis of these fields.

² These represent confined fires where it was reported that the detector did not alert the occupants.

Detector Status in Dukes County's Residential Fires 2010

VACANT BUILDINGS

1 Vacant Building Fire

One (1) of Dukes County reported fires occurred in a building that was vacant. It was in a single-family home.

JUVENILE-SET FIRES

No Juvenile-set Fires

There were no reported juvenile-set fires in Dukes County in 2010.

ARSONS

1 Arson

For the first time in four years, there was a reportable arson in Dukes County. There was one motor vehicle arson reported in 2010. This was an increase of one over none reported the previous year.

ALL INCIDENTS

False Alarms 2/3 of All Reported Responses

In 2010, Dukes County fire departments reported 162 responses³ to MFIRS. Of these 162 incidents, 128 non-fire calls⁴ were voluntarily reported.

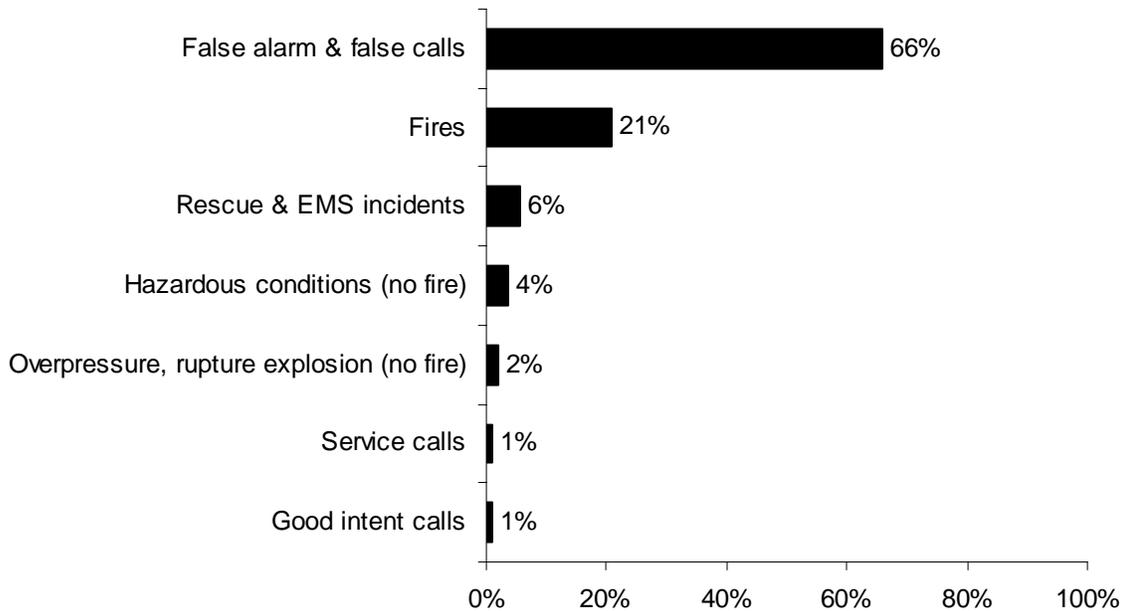

³ These figures include responses in which Dukes County fire departments gave mutual aid to other fire departments.

⁴ Tisbury is the only department in Dukes County that reports non-fire calls.

Of these 128 non-fire calls, 107, or 66%, were reported false alarm or false calls; nine, or 6% of all of the responses reported in 2010, were reported rescue and emergency medical services (EMS) calls; six, or 4%, were reported hazardous condition calls with no fire; three, or 2%, were reported overpressure, rupture, explosion or overheat calls with no fire; two, or 1%, were reported service calls such as lock-outs, water or smoke problems, unauthorized burning or public service assistance; and one, or 1%, was a reported good intent call.

Thirty-four (34), or 21%, of the total incidents submitted by Dukes County fire departments were fires.

2010 Incidents by Incident Type

Dukes County Fire Departments Gave Mutual Aid 14 Times

In 2010, Dukes County fire departments reported coming to the aid of other fire departments 14 times. Of these 14 responses, six, or 43%, were for fires; six, or 43%, were for false alarms or false calls; one, or 7%, was for a rescue or EMS call; and one, or 7%, was for a service call.

Dukes County Fire Departments Received Mutual Aid in 5 Incidents

In 2010, Dukes County fire departments reported receiving aid from surrounding departments in five incidents. All five of these incidents were for fires.

MFIRS
Massachusetts Fire Incident Reporting System

Massachusetts Fire Incident Reporting System 2010

Essex County Fires in 2010

3,574 Total Fires — 1,977 Structures, 295 Vehicles & 1,302 Other Fires

Essex County ranked fourth out of the fourteen Massachusetts counties in total reported fires. The county reported 3,574 fires to the Massachusetts Fire Incident Reporting System (MFIRS) in 2010. The 1,977 structure fires, 295 motor vehicle fires, 833 brush, tree or lawn fires, 279 outside rubbish fires, 96 special outside fires, five cultivated crop or vegetation fires, and 89 other fires caused three civilian deaths, 21 civilian injuries, 46 fire service injuries and an estimated dollar loss of \$24.3 million. Essex County's fires accounted for 11% of the 32,680 Massachusetts fires reported in 2010.

All 34 fire departments in Essex County either reported incidents to the Massachusetts Fire Incident Reporting System (MFIRS) or certified that they had no reportable fires in 2010.

Structure & Outside Fires Up

The total number of reported fire incidents increased by 794 incidents from the 2,780 that were reported in 2009. Reported structure fires increased by 335 from the 1,642 reported during the previous year. The total number of motor vehicle fires decreased by 38 from the 333 incidents reported during 2009. Reported outside and other fires increased by 497 from the 805 reported the year before.

Brush Fires Up by 96%

After a large increase in brush fires in 2007, they decreased by 376, or 39%, in 2008 and by another 161, or 27%, in 2009. In 2010, brush fires increased by 408, or 96%. This is a major increase and the main reason for the rise in all Essex County fires.

ESSEX COUNTY FIRES FROM 2006 TO 2010

Year	Total Fires	Structure Fires	Vehicle Fires	Other Fires	Total Arsons	Structure Arsons	Vehicle Arsons	Other Arsons
2006	2,875	1,443	343	1,089	107	27	12	68
2007	3,636	1,694	340	1,602	178	32	12	134
2008	2,886	1,629	326	931	132	19	17	96
2009	2,780	1,642	333	805	186	32	19	134
2010	3,574	1,977	295	1,302	152	23	19	110

Fire and Fire Death Rates

Essex County had 4.8 fires per 1,000 population. That figure ranks Essex County sixth in the state and below the state rate of 5.0 fires per 1,000 population. Essex County had 0.04 fire deaths per 10,000 population tying it for eighth among Massachusetts counties and just below the state rate of 0.05 deaths per 10,000 population.

3 Residents Died in 3 Essex County Fires

- On February 7, 2010, at 9:17 a.m., the Methuen Fire Department responded to an outside fire behind a single-family home. A partly burned body was found beside a fire pit. The victim was a 43-year old man. No one else was injured at this fire. No estimation was made for damages from this fire.
- On February 13, 2010, at 11:44 a.m., the Lynn Fire Department was dispatched to a fatal smoking fire in a 99-unit apartment building. The victim, a 68-year old man, was smoking while using home oxygen. The victim's clothes ignited and the sprinklers activated, suppressing the fire. He was transported to a local hospital where he later succumbed to his injuries. There were no other injuries associated with this fire. Detectors were present and they alerted the other occupants of the building. No estimation of damages was made for this incident.
- On November 11, 2010, at 6:08 p.m., the Andover Fire Department was called to an arson in a single-family home. The home had been foreclosed upon and was going up for auction in the near future. The victim, a 53-year old man, ignited the fire in various parts of the home. He even left a note on the door warning of booby traps and explosions. No one else was injured at this fire. Detectors were not present and the home was not sprinklered. Damages were estimated to be \$350,000.

Peabody Has Essex County's Largest Loss Fire in 2010

- On June 20, 2010, at 3:29 p.m., the Peabody Fire Department was called to a fire at the J.D. Raymond Company mulch yard. The fire began in one of the large piles of mulch. The fire was started by a natural chemical reaction inside the mulch pile. One (1) firefighter was injured at this fire. The fire also spread to equipment that was used to handle the mulch. The last units cleared two days later. Damages were estimated to be \$1.2 million.

STRUCTURE FIRES

Reported Structure Fires Up

The 1,977 structure fires caused two civilian deaths, 17 civilian injuries, 38 fire service injuries and an estimated dollar loss of \$21.7 million. These incidents represented 55% of Essex County's reported fires in 2010. The average estimated dollar loss per structure fire was \$10,985. The total number of reported structure fires increased by 335, or 20%, from the 1,642 reported in 2009.

Arson Caused 1% of Structure Fires

The 23 structure arsons caused one civilian fire death, two fire service injuries and an estimated dollar loss of \$369,050. Arson was indicated as the cause of 1% of the structure fires and 2% of Essex County's structure fire dollar loss. The 23 structure arsons accounted for 15% of the Essex County arson fires reported in 2010. The total number of reported structure arsons decreased by nine, or 28%, from 32 in 2009.

61% of Structure Arsons Occurred in Residences

Sixty-one percent (61%) of Essex County's 23 structure arsons occurred in residential occupancies. Public assembly facilities, institutional facilities and storage facilities were each responsible for 9% of the structure arsons. Educational facilities, mercantile or business facilities and special properties were each responsible for 4% of Essex County's structure arsons in 2010.

BUILDING FIRES

There were 1,964 building fires of different types in Essex County in 2010. These 1,964 building fires accounted for 99.3% of all structure fires in Essex County.

84% of Essex Building Fires Occurred in People's Homes

One thousand six hundred and fifty-six (1,656), or 84%, of Essex County's 1,964 building fires occurred in residential occupancies. Mercantile and business properties had 68 fires. Sixty-five (65) fires took place in public assembly properties, including restaurants and churches. Hospitals, prisons, and other institutional buildings experienced 49 fires. Forty-eight (48) building fires in Essex County occurred in special properties such as outbuildings, bus stop shelters and toll booths. Thirty (30) fires took place in storage properties. Another 30 fires took place in manufacturing and processing facilities. Fourteen (14) building fires took place on educational properties. Three (3) fires happened in industrial facilities, and one fire occurred in an unclassified property in Essex County in 2010.

RESIDENTIAL FIRES**Residential Building Fires Up in 2010**

There were 1,656 reported residential building fires in Essex County in 2010. These 1,656 fires are an increase of 287, or 21%, from the 1,369 residential building fires reported in 2009.

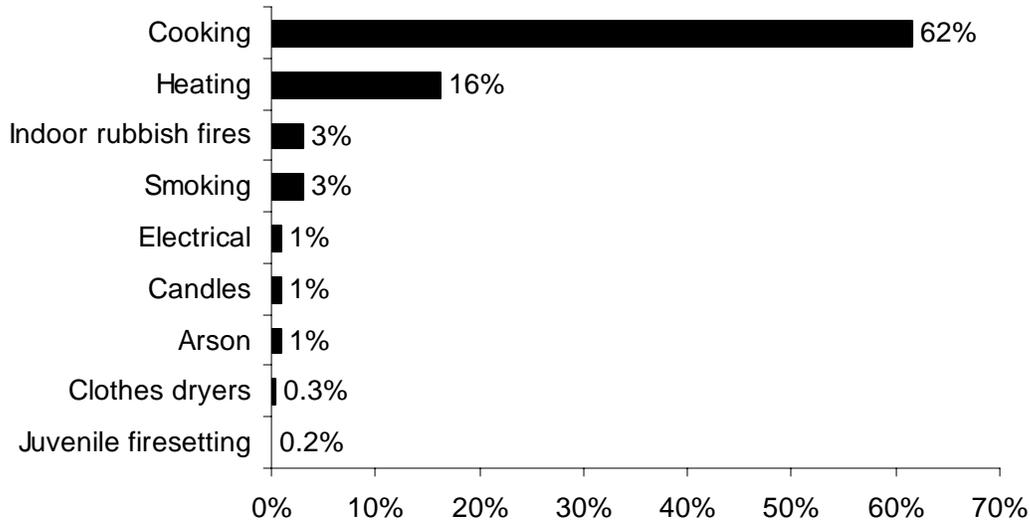

1- & 2-Family Homes Accounted for Almost 1/2 of Residential Building Fires

The peak fixed property uses for residential building fires were 1- and 2-family homes, accounting for almost half, or 46%, of the building fires in Essex County; 43% occurred in apartments; 3% happened in rooming houses; and 1% each took place in dormitories, residential board and care facilities, and hotels or motels. Sixty-six (66), or 4% of the residential building fires in Essex County occurred in unclassified residential buildings.

Cooking Leading Cause of Residential Fires

The leading cause of residential building fires in Essex County was unattended cooking and other unsafe cooking practices, accounting for 62% of these fires. Heating was the second leading cause, accounting for 16% of these fires. Indoor rubbish fires and smoking each caused 3% of these fires. Electrical problems, arson and candles each caused 1% of these fires; and clothes dryers and juvenile-set fires each caused less than 1% of the fires in people's homes in Essex County in 2010.

2010 Leading Causes of Fires in Essex County Homes

78% of Residential Building Fires Are Confined to Non-Combustible Containers¹

One thousand two hundred and eighty-five (1,285), or 78%, of all residential building fires were reported as confined to non-combustible containers in 2010. Nine hundred and seventy-seven (977), or 59%, of all residential building fires reported in 2010 were cooking fires contained to a non-combustible container. One hundred and sixty-five (165), or 10%, were fires confined to a fuel burner or boiler malfunction. Ninety-one (91) of the reported fires were confined to a chimney accounting for 5% of residential building fires. Forty-nine (49), or 3%, of these fires were rubbish fires contained to a non-combustible container. There were two reported incinerator overload or malfunctions and one confined commercial compactor fire, each representing less than 1% of the residential fires in Essex County in 2010.

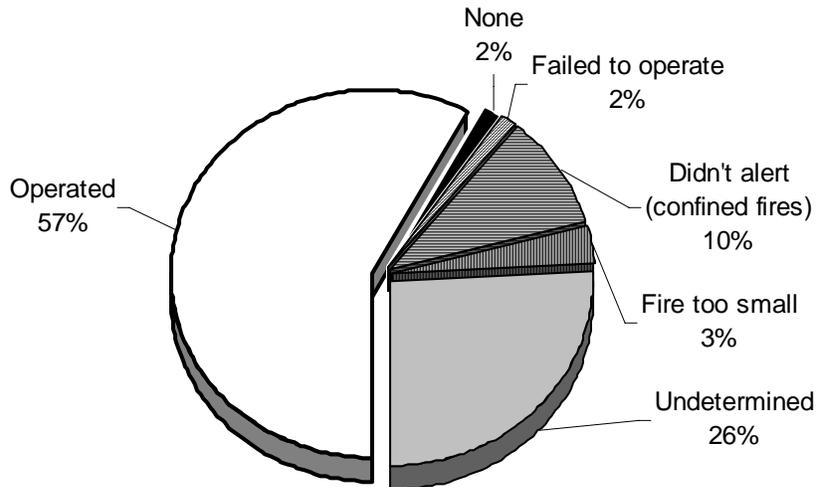

Detectors Operated in 57% of Fires

Smoke or heat detectors operated and alerted the occupants in 957, or 57%, of the residential building fires. In 10% of these fires², the detectors did not alert the occupants. Detectors were present but did not operate in 2% of these incidents. In 2% of these fires, no detectors were present at all. The fire was too small to trigger the detector in 3% of the residential fires. Smoke detector performance was undetermined in 430 incidents, or 26%, of Essex County's residential building fires.

¹ In MFIRS v5 a fire in a building contained to a non-combustible container (Incident Type = 113-118) does not have to have a Fire Module completed. Therefore the following data fields do not need to be completed: Area of Origin, Detector Status, Item First Ignited, Heat Source, Factors Contributing to Ignition, Cause of Ignition, and Equipment Involved In Ignition. These incidents are not included in the analysis of these fields.

² These represent confined fires where it was reported that the detector did not alert the occupants.

Detector Status in Essex County's Residential Structure Fires 2010

Over 1/4 of Failed Detectors Had Missing or Disconnected Batteries

Of the 25 fires where smoke detectors were present but failed to operate, seven, or 28%, failed because the batteries were either missing or disconnected. Four (4), or 16%, did not operate because of dead batteries. One (1), or 4%, failed because of a power failure, shutoff or disconnect. Another detector, or 4%, failed from a lack of maintenance; and one detector, or 4%, failed because of improper installation or placement. It was undetermined or unclassified in 11 cases, or 44%, why the detectors failed to operate.

VACANT BUILDINGS

2% of Building Fires Occurred in Vacant Buildings

Essex County reported 33 fires that occurred in buildings that were vacant, under construction or demolition³. This represented 2% of the total 1,964 building fires reported to MFIRS in 2010. Seventeen (17) fires occurred in vacant residential properties. Storage facilities accounted for nine vacant building fire incidents. Manufacturing or processing facilities accounted for four of these fires. Public assembly facilities, institutional facilities and mercantile or business properties each accounted for one vacant building fire in Essex County in 2010.

³ In version 4 a vacant building was defined by having a Fixed Property Use code in the subsection of construction, unoccupied properties, between 910 & 919. However in version 5, the Property Use is separate from the Building Status. In v5 a building is considered vacant if the Building Status is coded: 1- Under Construction; 3-Idle, not routinely used; 4-Under major renovation; 5-Vacant, secured; 6-Vacant, unsecured; & 7-Being demolished. The building use is coded separately in the Property Use field.

Five (5) of the vacant building fires in Essex County in 2010 were determined to be intentionally set. Three (3) single-family homes, one bar or nightclub, and one warehouse were vacant building arsons.

JUVENILE-SET FIRES

15 Juvenile-set Fires

There were 15 reported juvenile-set fires in Essex County in 2010. The four structure fires, nine brush fires, one special outside fire, and one unclassified fire caused one fire service injury and \$307,000 in estimated damages.

ARSONS

152 Total Arsons⁴ — 23 Structures, 19 Vehicles & 110 Other Arsons

One hundred and fifty-two (152), or 4%, of Essex County's 3,574 fires were considered intentionally set, or, for purposes of this analysis, arson. The 23 structure arsons, 19 motor vehicle arsons and 110 outside and other arsons caused two civilian deaths, two fire service injuries and an estimated dollar loss of \$379,650.

All Arsons Down

The total number of reported arson fires decreased by 33 from the 185 reported in 2009. Reported structure arsons decreased by nine from the 32 reported the previous year. Motor vehicle arsons remained the same with 19 reported in both 2009 and 2010. Outside and other arsons decreased by 24 from 134 reported the year before.

ALL INCIDENTS

Rescue & EMS Calls Are Over 1/2 of All Reported Responses

In 2010, fire departments in Essex County reported 85,039 responses⁵ to MFIRS. Of these 85,039 incidents, 81,292 non-fire calls were voluntarily reported.

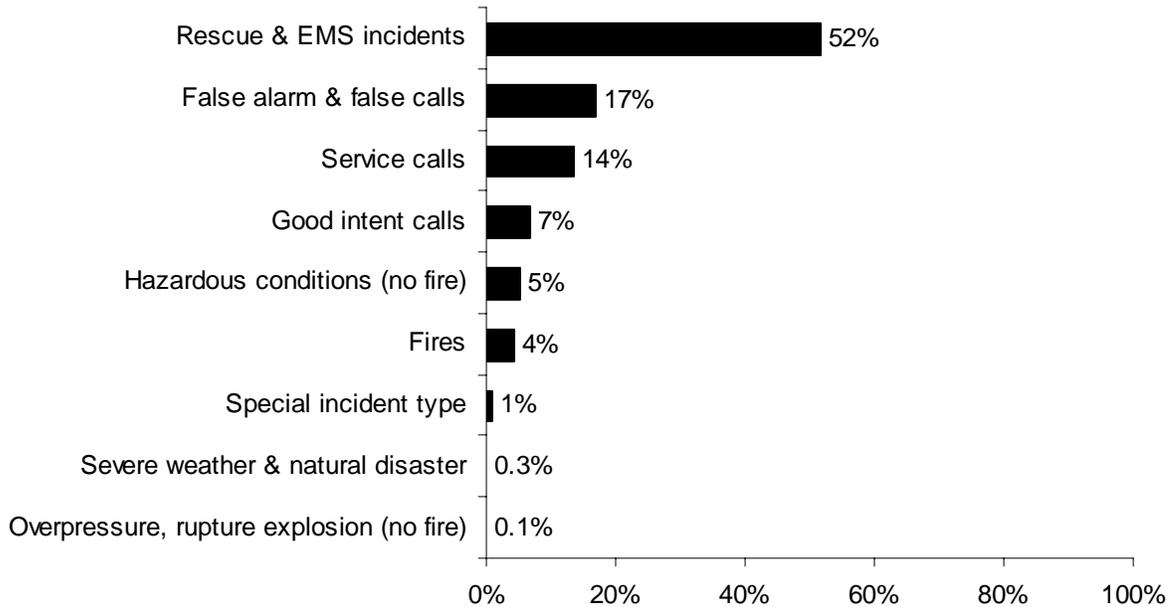

Of these 81,292 non-fire calls, 44,025, or 52%, of all the reported responses in 2010, were reported rescue and emergency medical services (EMS) calls; 14,505, or 17%, were reported false alarm or false calls; 11,638, or 14%, were reported service calls such as lock-outs, water or smoke problems, unauthorized burning or public service assistance; 5,636, or 7%, were reported good intent calls; 4,459, or 5%, were reported hazardous condition calls with no fire; 689, or 1%, were special incident type calls such as citizen complaints; 242, or 0.3%, were severe weather responses; and 98, or 0.1%, were reported overpressure, rupture, explosion or overheat calls with no fire.

⁴ In MFIRS v5 a fire is considered an arson if the Cause of Ignition = 1 (Intentional) and the Age of Person (Fire Module) is greater than 17 or if the field is blank; or if the Wildland Module is used, the Wildland Fire Cause = 7 (Incendiary) and the Age of the Person (Wildland Module) is greater than 17 or if the field is left blank.

⁵ These figures include responses in which Essex County fire departments gave mutual aid to other fire departments.

Three thousand seven hundred and forty-seven (3,747), or 4%, of the total incidents submitted by Essex County fire departments were fires.

2010 Responses by Incident Type

Essex County Fire Departments Reported Giving Mutual Aid 1,249 Times

In 2010, Essex County fire departments reported coming to the aid of other fire departments 1,249 times. Of these 1,249 responses, 491, or 39%, were for service calls such as cover assignments; 350, or 28%, were for rescue or EMS calls; 165, or 13%, were for good intent calls; 143, or 11%, were for fires; 82, or 7%, were for false alarms or false calls; 13, or 1%, were for hazardous conditions calls with no fire; four, or 0.3%, were special incident types; and one, or 0.1%, was a reported overpressure, rupture, explosion or overheat call with no fire.

Essex County Received Mutual Aid in 1,413 Incidents

In 2010, Essex County fire departments reported receiving aid from surrounding departments in 1,413 incidents. Of these 1,413 incidents, 947, or 67%, were rescue and emergency medical services calls; 203, or 14%, were for fires; 144, or 10%, were false alarms or false calls; 43, or 3%, were good intent calls; 40, or 3%, were hazardous conditions calls with no fire; 28, or 2%, were service calls; five, or 0.4%, were reported overpressure, rupture, explosion or overheat calls with no fire; two, or 0.1%, were for severe weather or natural disaster calls; and one, or 0.1%, was a special incident type.

Item First Ignited⁸	%	Factor Contrib. to Ignit.	%	%Unconfined⁹

Alerted occupants	61%
Didn't alert occupants	13%
Undetermined	26%

⁸ This field does not need to be completed for confined fires. Certain codes are inferred from the Incident Type.

⁹ Some fields in version 5 allow for multiple entries. Therefore the number of entries may be greater than the actual number of incidents being analyzed. These figures were calculated only from those incidents, which were coded as Unconfined fires (Incident Types 111-112 or 120-129). The USFA & NFPA do not recommend inferring codes for Factors Contributing to Ignition from the fires contained to non-combustible containers (Incident Types 113 – 118). This field does not need to be completed for confined fires.

¹⁰ This field does not need to be completed for confined fires. Certain codes are inferred from the Incident Type.

¹¹ These figures were calculated only from those incidents, which were coded as Unconfined fires (Incident Types 111-112 or 120-129). The USFA & NFPA do not recommend inferring codes for Cause of Ignition from the fires contained to non-combustible containers (Incident Types 113 – 118). This field does not need to be completed for confined fires.

2009	125	113	2	10	1	0	0	1
2010	187	146	5	36	0	0	0	0

¹² The large increase in fires is due to a correction in coding. Middleton stopped using the alarm/detector activation incident type codes (740 series) for confined cooking fires.

Lawrence Fires in 2010

412 Total Fires — 208 Structures, 45 Vehicles & 159 Other Fires

The Lawrence Fire Department reported 412 fires to the Massachusetts Fire Incident Reporting System (MFIRS) in 2010. The 208 structure fires, 45 motor vehicle fires, 117 brush fires, 30 outside rubbish fires, and nine unclassified fires caused two civilian injuries, 11 fire service injuries and an estimated dollar loss of \$6 million.

Structure & Outside Fires Up

Total fires increased by 193 from the 219 incidents reported in 2009. Reported structure fires increased by 96 from the 112 reported during the previous year. Motor vehicle fires remained the same with 45 reported in both 2010 as well as 2009. Outside and other fires increased by 97 from 62 in 2009.

The increase in structure fires is mainly due to the change in how Lawrence started to report certain types of cooking fires. Up until last year many incidents were being reported as smoke scares or smoke detector activations instead of confined cooking fires. Quality control in incident report writing has corrected this issue.

LAWRENCE FIRES FROM 2006 TO 2010

	Total Fires	Structure Fires	Vehicle Fires	Other Fires	Total Arsons	Structure Arsons	Vehicle Arsons	Other Arsons
2006	296	97	64	135	13	5	3	5
2007	282	134	67	81	43	12	2	22
2008	260	136	40	84	11	5	5	1
2009	219	112	45	62	43	17	6	20
2010	412	208	45	159	25	6	9	10

BUILDING FIRES

There were 206 building fires of different types in Lawrence in 2010. These 206 building fires accounted for 99% of all structure fires in Lawrence.

3/4 of Building Fires in Homes

The 206 building fires that occurred in Lawrence in 2010 can be broken down by fixed property use as follows: 165, or 75% of all building fires, were in residential properties; 20 fires happened in special properties; five fires occurred in mercantile or business properties; another five fires occurred in manufacturing or processing facilities, three fires occurred in public assembly properties; and three more occurred in institutional facilities.

RESIDENTIAL FIRES

Residential Building Fires Up

There were 165 reported residential building fires in Lawrence in 2010. These 165 fires are an increase of 83, or 101%, from the 82 residential building fires reported in 2009.

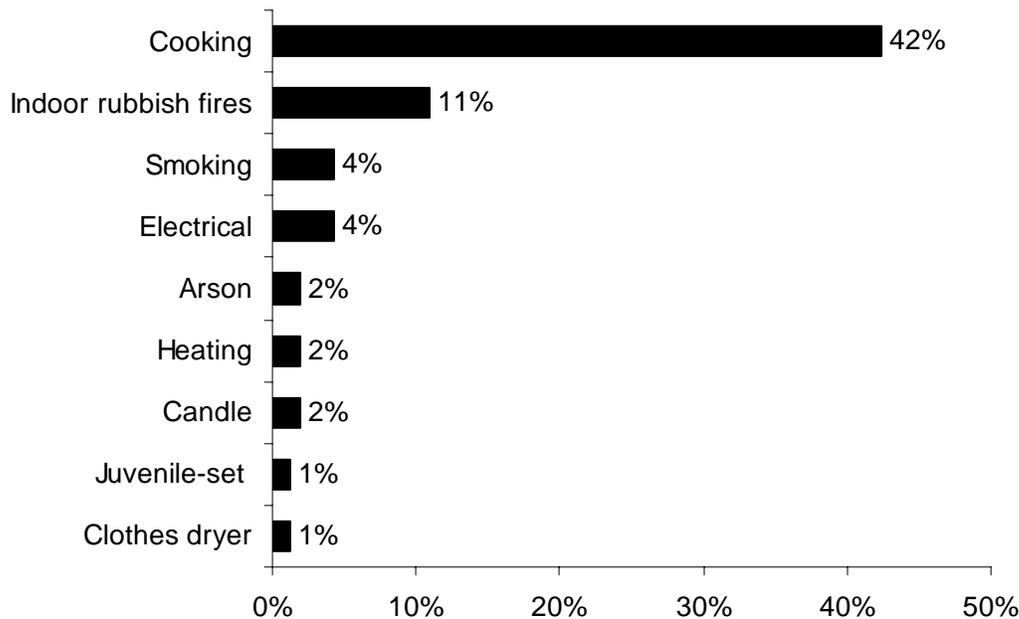

Apartments Accounted for Almost 2/3 of Residential Building Fires

The peak fixed property uses for residential building fires in Lawrence were apartments, accounting for 63% of the residential building fires. Twenty-four percent (24%) occurred in 1- or 2-family homes; 9% occurred in rooming houses; and 1% occurred in dormitories. Three percent (3%) of these fires happened in unclassified residential properties.

Unattended Cooking Leading Cause of Residential Fires

The leading cause of residential building fires in Lawrence was unattended cooking and other unsafe cooking practices, accounting for 42% of these fires. Eleven percent (11%) of were indoor rubbish fires. Smoking and electrical problems each accounted for 4% of the fires in residential occupancies. Arson, heating equipment and candles each caused 2% of the residential fires in Lawrence in 2010. Juvenile-set fires and clothes dryers each accounted for 1% of Lawrence's residential fires in 2010.

2010 Leading Causes of Fires in Lawrence Homes

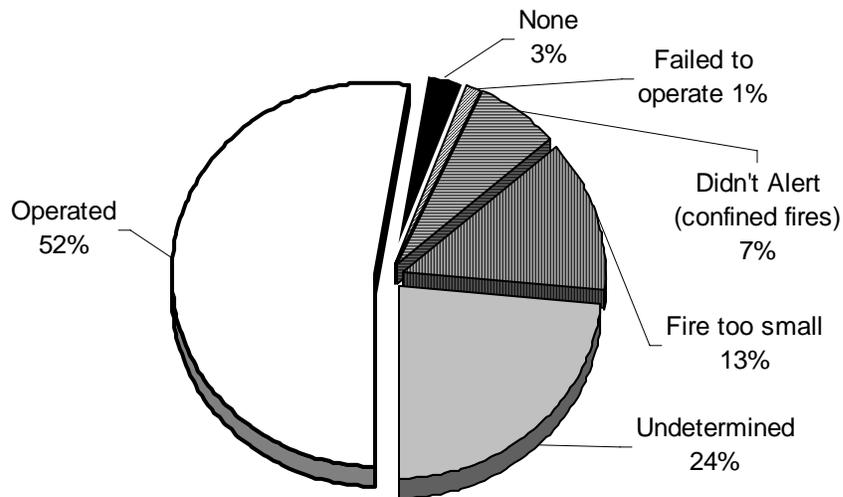

52% of Residential Building Fires Are Confined to Non-Combustible Containers¹

Eighty-five (85), or 52% of all residential building fires were confined to non-combustible containers in 2010. Sixty-three (63), or 38% of all residential building fires reported in 2010, were cooking fires contained to a non-combustible container. Eighteen (18), or 21%, of these fires were rubbish fires contained to a non-combustible container. Three (3), or 2%, of all residential building fires were fuel burner or boiler malfunctions; and one, or 1%, was an incinerator overload.

Detectors Alerted Occupants in Over 1/2 of Fires

Smoke or heat detectors operated and alerted the occupants in 87, or 52%, of the residential building fires. In 7% of these fires², the detectors did not alert the occupants. Detectors were present but did not operate in 1% of these incidents. In 3% of these fires, no detectors were present at all. The fire was too small to trigger the detector in 13% of the residential fires. Smoke detector performance was undetermined in 39 incidents, or 24% of Lawrence's residential building fires.

Detector Status in Lawrence Residential Fires 2010

Both Fires Were Undetermined Why the Detectors Failed

It was undetermined in both cases why the detectors failed to operate.

¹ In MFIRS v5 a fire in a building contained to a non-combustible container (Incident Type = 113-118) does not have to have a Fire Module completed. Therefore the following data fields do not need to be completed: Area of Origin, Detector Status, Item First Ignited, Heat Source, Factors Contributing to Ignition, Cause of Ignition, and Equipment Involved In Ignition. These incidents are not included in the analysis of these fields.

² These represent confined fires where it was reported that the detector did not alert the occupants.

VACANT BUILDINGS

6% of Building Fires Occurred in Vacant Buildings

Lawrence reported 12 fires that occurred in buildings that were vacant, under construction or demolition³. This represented 6% of the total 206 building fires reported to MFIRS in 2010. Four (4) one- or two-family homes, three manufacturing facilities, three warehouses, one apartment building, and one unclassified business were reported as vacant building fire incidents.

JUVENILE-SET FIRES

2 Juvenile-set Fires

There were two juvenile-set fires in Lawrence in 2010. Both of these fires were structure fires causing one fire service injury and an estimated \$301,000 in damages.

ARSONS

25 Total Arsons⁴ - 6 Structures, 9 Motor Vehicles & 10 Other

Twenty-five (25), or 6%, of Lawrence's 412 fires were considered intentionally set, or, for purposes of this analysis, arson. The six structure arsons, nine motor vehicle arsons and 10 outside and other arson caused an estimated dollar loss of \$14,500.

Structure & Outside Arson Is Down

The total number of arsons decreased by 18 from the 43 reported in 2009. Reported structure arsons decreased by 11 from the 17 reported in 2009. Motor vehicle arsons increased by three from six in 2009. Outside and other arsons decreased by 10 from the 20 reported last year.

ALL INCIDENTS

Rescue & EMS Calls Were Over 1/2 of All Reported Incidents

In 2010, Lawrence voluntarily reported 6,423 incidents to MFIRS. Of these 6,423 incidents, 6,008, or 94%, were non-fire incidents.

Of these 6,008 non-fire incidents 3,287, or 51% of all reported incidents in 2010, were reported rescue and emergency medical services (EMS) calls; 1,918, or 30%, were reported false alarm or false calls; 346, or 5%, were reported service calls such as lock-outs, water or smoke problem, unauthorized burning or public service assistance; 239, or

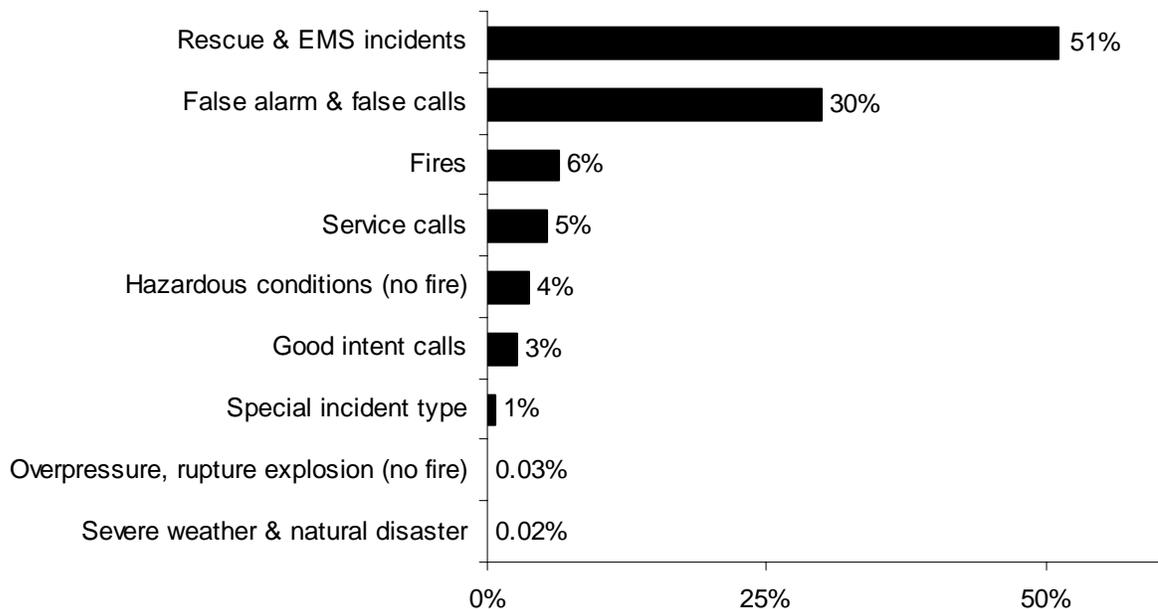

³ In version 4 a vacant building was defined by having a Fixed Property Use code in the subsection of construction, unoccupied properties, between 910 & 919. However in version 5, the Property Use is separate from the Building Status. In v5 a building is considered vacant if the Building Status is coded: 1- Under Construction; 3-Idle, not routinely used; 4-Under major renovation; 5-Vacant, secured; 6-Vacant, unsecured; & 7-Being demolished. The building use is coded separately in the Property Use field.

⁴ In MFIRS v5 a fire is considered an arson if the Cause of Ignition = 1 (Intentional) and the Age of Person (Fire Module) is greater than 17 or if the field is blank; or if the Wildland Module is used, the Wildland Fire Cause = 7 (Incendiary) and the Age of the Person (Wildland Module) is greater than 17 or if the field is left blank.

4%, were reported hazardous condition calls with no fire; 171, or 3%, were reported good intent calls; 44, or 1%, were special incident types; two, or 0.3%, were reported overpressure, rupture, explosion or overheat calls with no fire; and one, or 0.02% were severe weather calls;

In 2010, Lawrence reported 415 fires⁵, accounting for 6% of all reported incidents.

2010 Incidents by Incident Type

Lawrence Gave Mutual Aid in 21 Reported Incidents

In 2010, Lawrence reported coming to the aid of other fire departments 21 times. Nineteen (19), or 90%, of these incidents were service calls such as station coverage; one, or 5%, was for a fire; and the other aid given call, or 5%, was a rescue or EMS incident.

Lawrence Received Aid in 18 Reported Incidents

In 2010, Lawrence reported receiving mutual aid at 18 incidents. Twelve (12), or 67, of these incidents were fires; one, or 17% was for a false alarm; and one, or 17%, was for a rescue or EMS call.

⁵ This figure includes the mutual aid calls that Lawrence responded to outside of their jurisdiction.

Lynn Fires in 2010

482 Total Fires — 378 Structures, 20 Vehicles & 84 Other Fires

The Lynn Fire Department reported 482 fires to the Massachusetts Fire Incident Reporting System (MFIRS) in 2010. The 378 structure fires, 20 motor vehicle fires, 53 outside rubbish fires, 24 brush fires, four special outside fires; and three unclassified fires caused one civilian death, one civilian injury, four firefighter injuries and an estimated dollar loss of \$56,500.

1 Resident Killed While Smoking on Home O₂

- On February 13, 2010, at 11:44 a.m., the Lynn Fire Department was dispatched to a fatal smoking fire in a 99-unit apartment building. The victim, a 68-year old man, was smoking while using home oxygen. The victim's clothes ignited and the sprinklers activated, suppressing the fire. He was transported to a local hospital where he later succumbed to his injuries. There were no other injuries associated with this fire. Detectors were present and they alerted the other occupants of the building. No estimation of damages was made for this incident.

All Fires Up in 2010

Total fires increased by 225, or 88%, from the 257 incidents reported in 2009. Reported structure fires increased by 179 from the 199 reported during the previous year. Motor vehicle fires increased by one from 19 the year before. Outside and other fires increased by 45 from the 39 reported in 2009.

The increase in structure fires is mainly due to the change in how Lynn started to report certain types of cooking fires. Up until last year many incidents were being reported as smoke scares or smoke detector activations instead of confined cooking fires. Quality control in incident report writing has corrected this issue.

LYNN FIRES FROM 2006 TO 2010

	Total Fires	Structure Fires	Vehicle Fires	Other Fires	Total Arsons	Structure Arsons	Vehicle Arsons	Other Arsons
2006	95	65	29	1	8	6	2	0
2007	128	87	38	3	4	4	0	0
2008	126	83	42	1	8	2	6	0
2009 ¹	257	199	19	39	4	3	1	0
2010	482	378	20	84	5	2	2	1

BUILDING FIRES

There were 378 building fires of different types in Lynn in 2010. These 378 building fires accounted for all structure fires in Lynn.

¹ In July 2009, Lynn began reporting all incidents not just the mandated fires & explosions with a dollar loss or human casualty.

87% of Building Fires in Homes

The 378 building fires that occurred in Lynn in 2010 can be broken down by fixed property use as follows: 330, or 87% of all building fires, were in residential properties; 17 fires occurred in institutional facilities; 14 fires occurred in special properties; nine fires occurred in public assembly properties; three happened in mercantile or business properties; another three occurred in manufacturing or processing facilities; one fire occurred in educational facility; and one fire was reported to have occurred at a storage facility.

RESIDENTIAL FIRES

Residential Building Fires Up

There were 330 reported residential building fires in Lynn in 2010. These 330 fires are an increase of 157 from the 173 reported residential building fires reported in 2009.

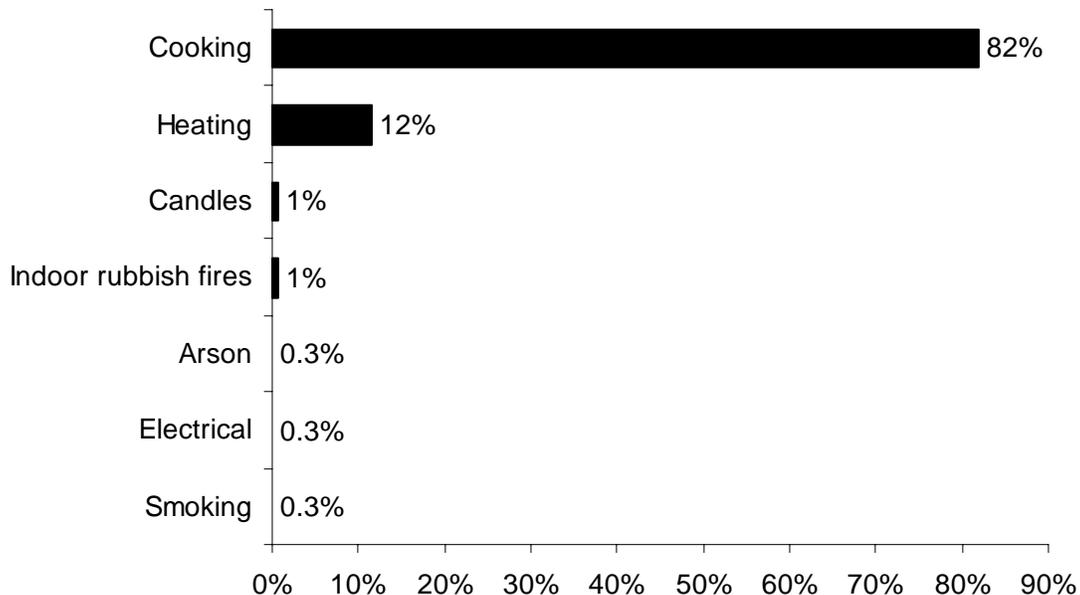

Apartments Accounted for 72% of Residential Building Fires

The peak fixed property uses for residential building fires were apartments, accounting for 72% of the building fires in Lynn; 24% occurred in 1- or 2-family homes; and 5% happened in rooming houses.

Unattended Cooking Caused 82% of Residential Fires

The leading cause of residential building fires in Lynn was unattended cooking and other unsafe cooking practices, accounting for 82% of these fires. Heating fires caused 12% of these fires. Candles and indoor rubbish fires each caused 1% of the fires. Arsons, electrical problems and smoking fires were each the cause of less than 1% of the fires in Lynn’s residential occupancies in 2010.

**2010 Leading Causes of Fires
in Lynn Homes**

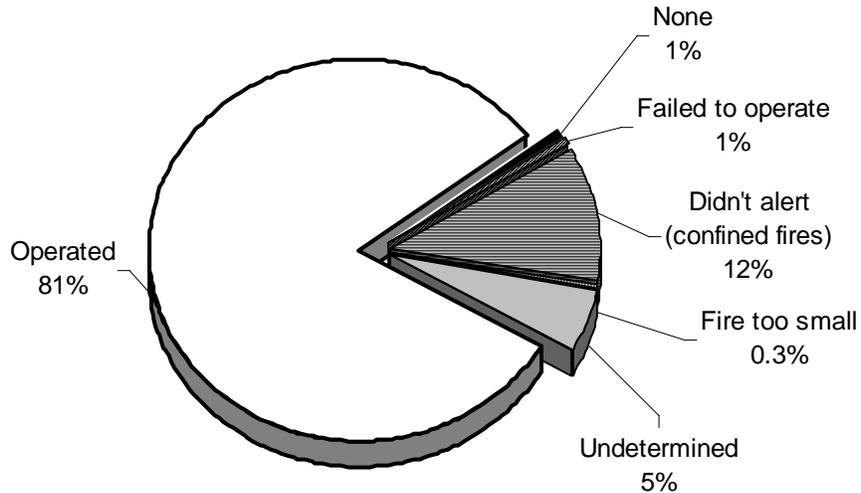

90% of Residential Building Fires Are Confined to Non-Combustible Containers²

Two hundred and ninety-six (296), or 90% of all residential building fires were confined to non-combustible containers in 2010. Two hundred and fifty-eight (258), or 78%, of all residential building fires reported in 2010 were cooking fires contained to a non-combustible container. Thirty-one (31), or 9%, were fires confined to a fuel burner or boiler malfunction. Four (4) fires, or 1%, were reported to have been contained to a chimney or flue. Two (2) fires, or 1%, were rubbish fires contained to a non-combustible container; and one fire, or less than 1%, was confined to a commercial compactor.

Detector Operated in 81% of Fires

Smoke or heat detectors operated and alerted the occupants in 269, or 81%, of the residential building fires. In 12% of these fires³, the detectors did not alert the occupants. There were no detectors in 1% of these fires. Detectors were present but did not operate in 1% of these incidents. The fire was too small to trigger the detector in less than 1% of these fires. Smoke detector performance was undetermined in 17 incidents, or 5% of Lynn’s residential building fires.

Detector Status in Lynn's Residential Fires 2010

² In MFIRS v5 a fire in a building contained to a non-combustible container (Incident Type = 113-118) does not have to have a Fire Module completed. Therefore the following data fields do not need to be completed: Area of Origin, Detector Status, Item First Ignited, Heat Source, Factors Contributing to Ignition, Cause of Ignition, and Equipment Involved In Ignition. These incidents are not included in the analysis of these fields.

³ These represent confined fires where it was reported that the detector did not alert the occupants.

Unknown Why Both Detectors Failed

It was undetermined in both fires where the detectors were reported to have failed.

VACANT BUILDINGS**Less Than 1% of Building Fires Occurred in Vacant Buildings**

Lynn reported one fire that occurred in buildings that were vacant, under construction or demolition⁴. This represented less than 1% of the total 378 building fires reported to MFIRS in 2010. One (1) fire in a manufacturing or processing facility was reported as a vacant building fire incident.

JUVENILE-SET FIRES**0 Juvenile-set Fires**

Lynn did not report any juvenile-set fires in 2010.

ARSONS**5 Arsons⁵ - 2 Structure, 2 Motor Vehicle and 1 Outside & Other**

Five (5), or 1%, of Lynn's 482 fires were considered intentionally set, or, for purposes of this analysis, arson. There were two structure arsons, two motor vehicle arsons and one outside and other arson.

All Arsons Up Slightly in 2010

The total number of arsons increased slightly in 2010 with five reported in 2010 and four in 2009. Reported structure arsons decreased by one from the three reported in 2009. Reported motor vehicle arsons increased by one from the one arson reported in 2009. Outside and other arsons also increased by one from one reported the year before.

33 Fires Reported as Undetermined or Still Under Investigation

In 2010, Lynn reported 33 fires under investigation or cause undetermined after investigation. Ten (10), or 30%, of these fires were reported to be undetermined after investigation. The other 23, or 70%, were still under investigation.

Ten (10), or 30%, of these 33 fires were structure fires. Eight (8), or 24% were motor vehicle fires; and 15, or 45%, were outside or other fires. Because so many fires are under investigation or undetermined after investigation, the true arson number might be actually higher in Lynn in 2010.

⁴ In version 4 a vacant building was defined by having a Fixed Property Use code in the subsection of construction, unoccupied properties, between 910 & 919. However in version 5, the Property Use is separate from the Building Status. In v5 a building is considered vacant if the Building Status is coded: 1- Under Construction; 3-Idle, not routinely used; 4-Under major renovation; 5-Vacant, secured; 6-Vacant, unsecured; & 7-Being demolished. The building use is coded separately in the Property Use field.

⁵ In MFIRS v5 a fire is considered an arson if the Cause of Ignition = 1 (Intentional) and the Age of Person (Fire Module) is greater than 17 or if the field is blank; or if the Wildland Module is used, the Wildland Fire Cause = 7 (Incendiary) and the Age of the Person (Wildland Module) is greater than 17 or if the field is left blank.

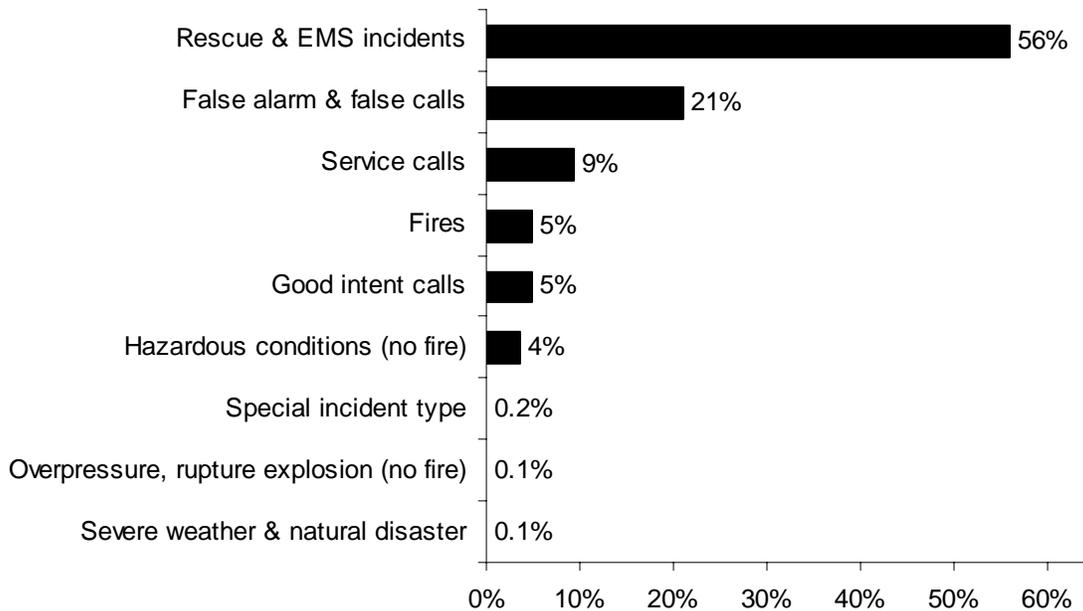

Rescue & EMS Calls Are 56% of All Reported Incidents

In 2010, Lynn voluntarily reported 10,047 incidents to MFIRS. Of these 10,047 incidents, 6,543, or 95%, were non-fire incidents.

Of these 6,543 non-fire incidents 5,631, or 56% of all reported incidents in 2010, were reported rescue and emergency medical services (EMS) calls; 2,114, or 21%, were reported false alarm or false calls; 932, or 9%, were reported service calls such as lock-outs, water or smoke problem, unauthorized burning or public service assistance; 466, or 5%, were reported good intent calls; 360, or 4%, were reported hazardous condition calls with no fire; 22, or 0.2%, were special type incidents; 12, or 0.1%, were reported overpressure, rupture, explosion or overheat calls with no fire; and six, or 0.1%, were responses to incidents caused by severe weather.

In 2010, Lynn reported 504 fires, accounting for 5% of all reported incidents.

2010 Incidents by Incident Type

Lynn Gave Mutual Aid in 24 Incidents

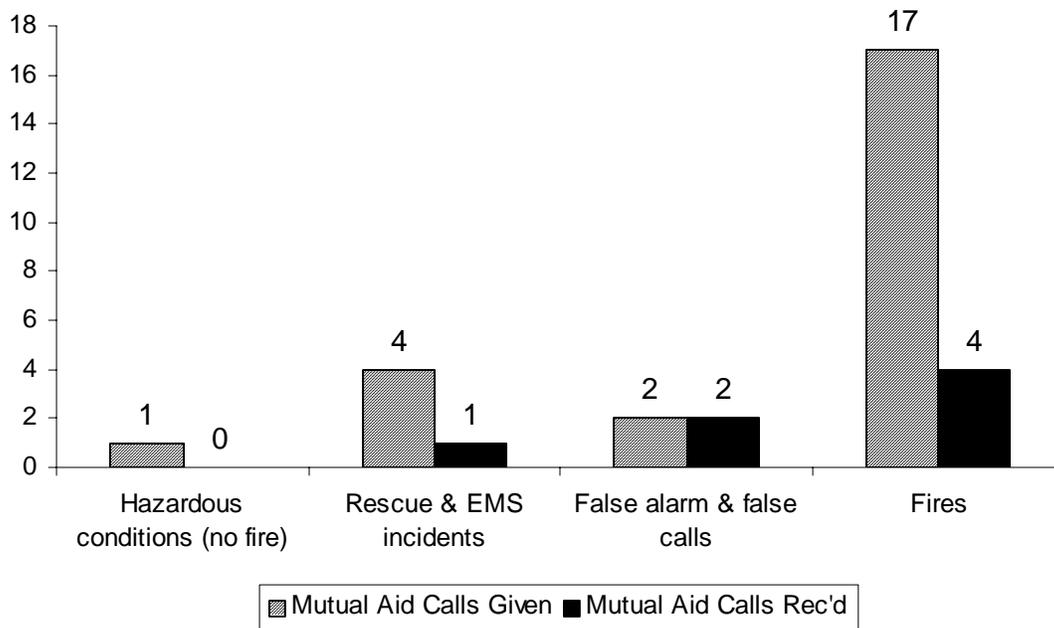

In 2010, Lynn reported giving mutual aid to other surrounding fire departments in 24 incidents. Seventeen (17), or 71%, were for fires; four (4), or 17%, were for rescue or EMS calls; two, or 8%, were for false alarm or false calls; and one, or 4%, was for a hazardous condition call with no fire.

Lynn Received Mutual Aid in 7 Incidents

In 2010, surrounding fire departments gave aid to Lynn in seven incidents. Of these seven incidents, four, or 57%, were fires; two, or 29%, were false alarm or false calls; and one, or 14%, was a rescue or EMS call.

The following chart compares the number of calls that the Lynn Fire Department gave mutual aid to a neighboring community compared to the number of calls that a neighboring community assisted Lynn. In 2010 Lynn gave aid to other fire departments almost three and a half times as much as they were asked for it.

Lynn's Mutual Aid Calls in 2010

2010 Fires

MFIRS
Massachusetts Fire Incident Reporting System

Massachusetts Fire Incident Reporting System 2010

Franklin County Fires in 2010

396 Total Fires — 186 Structures, 43 Motor Vehicles & 167 Outside or Other Fires

Franklin County ranked twelfth out of the fourteen Massachusetts counties in total fires. Franklin County fire departments reported 396 fires to the Massachusetts Fire Incident Reporting System (MFIRS) in 2010. The 186 structure fires, 43 motor vehicle fires, 100 brush, tree or lawn fires, 32 outside rubbish fires, 18 special outside fires, one cultivated crop or vegetation fire and 16 unclassified fires caused two civilian deaths, one fire service death, one civilian injury and an estimated dollar loss of \$1.7 million. Franklin County's fires accounted for 1% of the 32,680 Massachusetts fires reported in 2010.

Twenty-seven (27) of the 29, or 93%, fire departments in Franklin County either reported incidents to the Massachusetts Fire Incident Reporting System (MFIRS) or certified that they had no reportable fires in 2010.

2 Civilian Fire Deaths in Franklin County in 2010

In 2010, Franklin County had two civilian fire deaths.

- On January 9, 2010, at 7:44 p.m., the Shelburne Fire Department responded to an EMS call for a patient with severe burns at a single-family home. The victim, a 52-year old man, was loading wood into a wood stove when his pants caught fire. He was transported to a local hospital and then transferred to a Boston hospital where he succumbed to his injuries two weeks later. No one else was injured at this fire. It was undetermined if detectors were present, and the building was not sprinklered. Damages from this fire were not estimated.
- On October 11, 2010, at 11:54 a.m., the Heath Fire Department responded to a brush fire underneath some power lines. The body of the victim, a 55-year old man from Missouri, was found at the base of one of the towers. There was charring up the tower to 80 feet. It is believed that he climbed the tower and somehow caused arcing from the power lines. No one else was injured at this fire. Damages from this fire were not estimated.

1 Fire Service Fire-Related Death in 2010 - Otis FF David Sullivan

- On July 24, 2010, at 3:37 p.m., the Otis Fire Department responded to a mutual aid call to the Town of Tolland for an electrical fire in a single-family home. FF Sullivan and the rest of his crew worked at the scene of the fire, cleared the scene and returned home. The following day, he complained that he was not feeling well and went back to his home, where he died from an apparent heart attack. He was 70 years old.

All Fires Up

The total number of reported fire incidents increased by 89, or 22%, from the 307 reported in 2009. Reported structure fires increased by 22 from the 164 reported during the previous year. Motor vehicle fires increased by 16 from 27 in 2009. Outside and other fires increased by 51 from the 116 reported the year before. This was a statewide trend.

FRANKLIN COUNTY FIRES FROM 2006 TO 2010

Year	Total Fires	Structure Fires	Vehicle Fires	Other Fires	Total Arsons	Structure Arsons	Vehicle Arsons	Other Arsons
2006	383	175	35	173	14	3	3	8
2007	329	127	36	166	18	5	1	12
2008	306	160	32	114	14	1	1	12
2009	307	164	27	116	17	2	1	14
2010	396	186	43	167	27	8	1	18

Fire and Fire Death Rates

Franklin County had 5.5 fires per 1,000 population. That figure ranks Franklin County second in the state and above the state rate of 5.0 fires per 1,000 population. Franklin County also had 0.28 fire deaths per 10,000 population ranking it second among Massachusetts counties and above the state rate of 0.05 fire deaths per 10,000 population.

Charlemont Has Franklin County's Largest Loss Fire

- On February 11, 2010, at 6:42 p.m., the Charlemont Fire Department was called to an electrical fire in a two-family home. The fire began in the ceiling and floor assembly between the basement and the first floor. No one was injured at this fire. Detectors were present and operated. There were no sprinklers. Damages from this fire were estimated to be \$554,000.

STRUCTURE FIRES**Reported Structure Fires Up**

The 186 structure fires caused one civilian death, one fire service death, one civilian injury, and an estimated dollar loss of \$1.6 million. These incidents represented 47% of Franklin County's reported fires in 2010. The average estimated dollar loss per structure fire was \$8,376. The total number of reported structure fires increased by 22, or 13%, from the 164 reported in 2009.

Arson Caused 4% of Structure Fires

The eight structure arsons caused an estimated dollar loss of \$154,600. Arson was indicated as the cause of 4% of the structure fires and 10% of Franklin County's structure fire dollar loss. The eight structure arsons accounted for 30% of the Franklin County arson fires reported in 2010. The total number of reported structure arsons increased by six, or 300%, from the two reported in 2009.

Over 1/3 of Structure Arsons Occurred in Residences

Three (3), or 38%, of Franklin County's structure arsons occurred in residential properties. Two (2) of these arsons occurred in special properties; a public assembly facility, an educational facility and a storage facility each had one structure arson in 2010.

BUILDING FIRES

There were 183 building fires of different types in Franklin County in 2010. These 183 building fires accounted for 98.4% of all structure fires in Franklin County.

86% of Franklin Building Fires Occurred in People's Homes

One hundred and fifty-eight (158), or 86%, of Franklin County's 183 building fires occurred in residential occupancies. Mercantile or business properties had seven fires. Five (5) fires occurred at educational facilities. Four (4) fires occurred in special properties such as outbuildings or sheds. Public assembly properties, institutional facilities, manufacturing or processing facilities and storage facilities each had two fires. Two (2) fires took place in public assembly properties, including restaurants and churches. One (1) fire occurred in an industrial facility in Franklin County in 2010.

RESIDENTIAL FIRES

Residential Building Fires Up

There were 158 reported residential building fires in Franklin County in 2010. These 158 fires are an increase of 27, or 21%, from the 131 residential building fires reported in 2009.

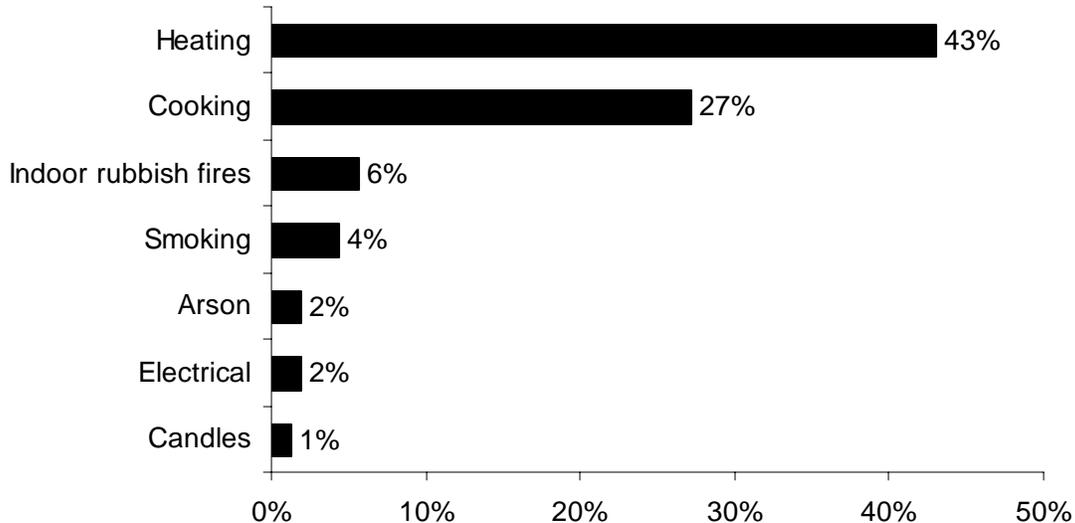

1- & 2-Family Homes Accounted for Over 3/4 of Residential Building Fires

The peak fixed property uses for residential building fires were one- & two-family homes, accounting for 78% of the building fires in Franklin County; 15% occurred in apartments; 1% each happened in rooming houses and residential board and care facilities. Eight (8), or 5%, of the residential building fires in Franklin County occurred in unclassified residential buildings.

Heating Leading Cause of Residential Fires

Heating was the leading cause of residential fires in Franklin County in 2010. Forty-three percent (43%) of the residential fires were caused by heating. Eighty-eight percent (88%) of these heating fires involved solid fueled equipment such as wood or coal stoves. Franklin County was the only county where cooking was not the leading cause of residential fires in 2010. Unattended cooking and other unsafe cooking practices accounted for 27% of the fires in people's homes. Indoor rubbish fires caused 6% of these fires. Smoking accounted for 4% of the residential building fires. Arson and electrical problems each caused 2% of these fires, and candles caused 1% of the fires in people's homes in Franklin County in 2010.

2010 Leading Causes of Fires in Franklin County Homes

72% of Residential Building Fires Are Confined to Non-Combustible Containers¹

One hundred and fourteen (114), or 72%, of these fires were confined to a non-combustible container. Fifty-eight (58), or 37%, of all residential building fires reported in 2010 were fires confined to a chimney or flue. Forty (40) of the reported fires were cooking fires contained to a non-combustible container accounting for 25% of residential building fires. Nine (9), or 6%, of these fires were indoor rubbish fires contained to a non-combustible container. Seven (7), or 4%, were fires confined to a fuel burner or boiler malfunction in Franklin County in 2010.

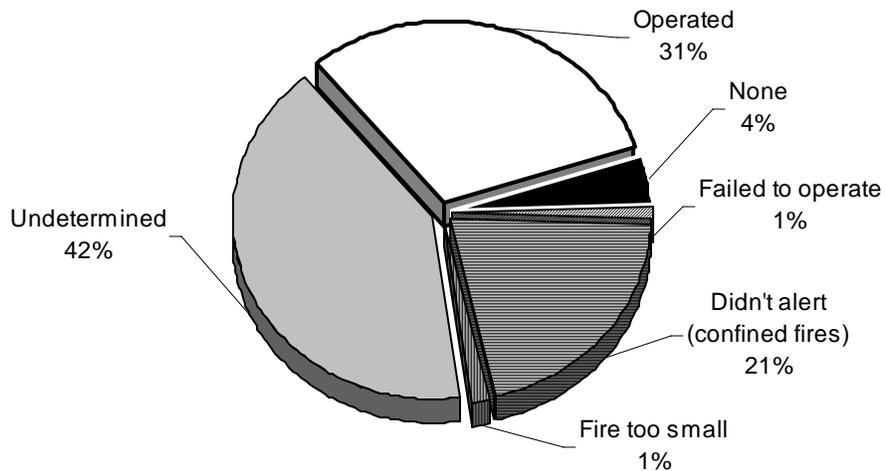

Detectors Operation Undetermined in 42% of Fires

Smoke or heat detectors operated and alerted the occupants in 49, or 31%, of the residential building fires. In 21% of these fires², the detectors did not alert the occupants. Detectors were present but did not operate in 1% of these incidents. In 4% of these fires, no detectors were present at all. The fire was too small to trigger the detector in 1% of the residential fires. Smoke detector performance was undetermined in 65 incidents, or 42%, of Franklin County's residential building fires.

¹ In MFIRS v5 a fire in a building contained to a non-combustible container (Incident Type = 113-118) does not have to have a Fire Module completed. Therefore the following data fields do not need to be completed: Area of Origin, Detector Status, Item First Ignited, Heat Source, Factors Contributing to Ignition, Cause of Ignition, and Equipment Involved In Ignition. These incidents are not included in the analysis of these fields.

² These represent confined fires where it was reported that the detector did not alert the occupants.

Detector Status in Franklin County's Residential Structure Fires 2010

2 Detectors Failed

In the two fires where smoke detectors were present but failed to operate, one failed because its battery was dead, and it was undetermined why the other detector failed.

VACANT BUILDINGS

4% of Building Fires Occurred in Vacant Buildings

Franklin County reported eight fires that occurred in buildings that were vacant, under construction or demolition³. This represented 4% of the total 183 building fires reported to MFIRS in 2010. Four (4) fires occurred at vacant residences; two occurred at educational facilities, one vacant building fire occurred at an institutional facility and another occurred at a business in Franklin County in 2010.

One of the vacant building fires in Franklin County in 2010 was determined to be intentionally set and that occurred at an elementary school.

³ In version 4 a vacant building was defined by having a Fixed Property Use code in the subsection of construction, unoccupied properties, between 910 & 919. However in version 5, the Property Use is separate from the Building Status. In v5 a building is considered vacant if the Building Status is coded: 1- Under Construction; 3-Idle, not routinely used; 4-Under major renovation; 5-Vacant, secured; 6-Vacant, unsecured; & 7-Being demolished. The building use is coded separately in the Property Use field.

JUVENILE-SET FIRES

4 Juvenile-set Fires Caused \$150,100 in Damages

There were four reported juvenile-set fires in Franklin County in 2010. The two structure fires and two brush fires caused \$150,100 in estimated damages.

ARSONS

27 Total Arsons — 8 Structure, 1 Motor Vehicle & 18 Other Arsons

Eighteen (18), or 7%, of Franklin County's 396 fires were intentionally set, or, for purposes of this analysis, arson⁴. The eight structure arsons, one motor vehicle arson and 18 outside and other arsons caused an estimated dollar loss of \$154,600.

Structure Arson Up

The number of arsons increased by 10, or 59%, from the 17 reported in 2009. Structure arsons increased by six from two reported in 2009. Motor vehicle arsons remained the same with one reported in both 2009 and 2010. Outside and other arsons rose by four from the 14 reported in 2009.

ALL INCIDENTS

Rescue & EMS Calls Are 46% of All Reported Responses

In 2010, Franklin County fire departments reported 6,834 responses⁵ to MFIRS. Of these 6,834 incidents, 6,235 non-fire calls were voluntarily reported.

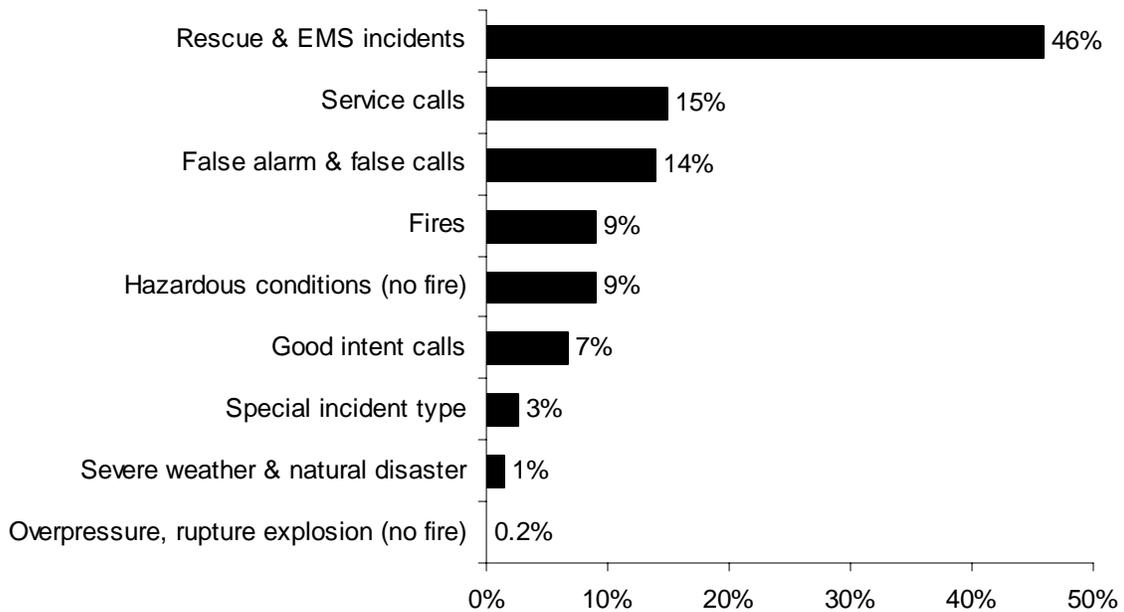

Of these 6,235 non-fire calls, 3,140, or 46%, of all of the responses reported in 2010 were reported rescue and emergency medical services (EMS) calls; 1,015, or 15%, were reported service calls such as lock-outs, water or smoke problems, unauthorized burning or public service assistance; 693, or 14%, were reported false alarm or false calls; 599 or 9%, were reported hazardous condition calls with no fire; 455, or 7%, were reported good intent calls; 183, or 3%, were special incident type calls such as citizen complaints; 98, or 1%, were severe weather responses; and 12, or 0.2%, were reported overpressure, rupture, explosion or overheat calls with no fire.

Six hundred and thirty-nine (639), or 9%, of the total incidents submitted by Franklin County fire departments were fires.

⁴ In MFIRS v5 a fire is considered an arson if the Cause of Ignition = 1 (Intentional) and the Age of Person (Fire Module) is greater than 17 or if the field is blank; or if the Wildland Module is used, the Wildland Fire Cause = 7 (Incendiary) and the Age of the Person (Wildland Module) is greater than 17 or if the field is left blank.

⁵ These figures include responses in which Franklin County fire departments gave mutual aid to other fire departments.

2010 Responses by Incident Type

Franklin County Fire Departments Gave Mutual Aid 547 Times

In 2010, Franklin County fire departments reported coming to the aid of other fire departments 547 times. Of these 547 responses, 242, or 44%, were for fires; 192, or 35%, were for rescue or EMS calls; 72, or 13%, were for service calls such as cover assignments; 23, or 4%, were for good intent calls; 10, or 2%, were for hazardous conditions calls with no fire; three, or 1%, were for false alarms or false calls; another three, or 1%, were special incident types; one, or 0.2%, was for an overpressure, rupture explosion with no fire; and another one, or 0.2%, was a severe weather call.

Franklin County is the only county where giving mutual aid for fires is the leading type of mutual aid given calls in that county.

Franklin County Received Mutual Aid in 309 Incidents

In 2010, Franklin County fire departments reported receiving aid from surrounding departments in 309 incidents. Of these 309 incidents, 213, or 69%, were rescue and emergency medical services calls; 67, or 22%, were for fires; nine, or 3%, were hazardous conditions calls with no fire; seven, or 2%, were good intent calls; six, or 2%, were service calls; five, or 2%, were false alarm or false calls; one, or 0.3% was for a severe weather call; and another one, or 0.3%, was for an overpressure, rupture explosion with no fire call.

⁶ This field does not need to be completed for confined fires. Certain codes are inferred from the Incident Type.

⁷ These figures were calculated only from those incidents, which were coded as Unconfined fires (Incident Types 111-112 or 120-129). The USFA & NFPA do not recommend inferring codes for Heat Source from the fires contained to non-combustible containers (Incident Types 113 – 118). This field does not need to be completed for confined fires, but is sometimes voluntarily reported.

Item First Ignited⁸	%	Factor Contrib. to Ignit.	%	%Unconfined⁹

Massachusetts Fire Incident Reporting System 2010

Hampden County Fires in 2010

2,323 Total Fires — 1,173 Structures, 286 Vehicles & 864 Other Fires

Hampden County ranked sixth out of the fourteen Massachusetts counties in total reported fires. Hampden County fire departments reported 2,323 fires to the Massachusetts Fire Incident Reporting System (MFIRS) in 2010. The 1,173 structure fires, 286 motor vehicle fires, 433 brush, tree or lawn fires, 287 outside rubbish fires, 57 special outside fires, four cultivated vegetation or crop fires, and 83 other fires caused two civilian fire deaths, 33 civilian injuries, 57 fire service injuries and an estimated dollar loss of \$12.9 million. Hampden County's 2,323 fires accounted for 7% of the 32,680 fire incidents reported to MFIRS in 2010.

Twenty-four (24), or 96%, of the 25 fire departments in Hampden County either reported incidents to the Massachusetts Fire Incident Reporting System (MFIRS) or certified that they had no reportable fires in 2010.

All Fires Up

The total number of reported fire incidents increased by 272 from the 2,051 reported in 2009. Reported structure fires increased by 15 from the 1,158 reported during the previous year. Motor vehicle fires increased by 31 from the 255 reported during 2009. Outside and other fires increased by 226 from the 638 reported the year before.

HAMPDEN COUNTY FIRES FROM 2006 TO 2010

Year	Total Fires	Structure Fires	Vehicle Fires	Other Fires	Total Arsons	Structure Arsons	Vehicle Arsons	Other Arsons
2006	2,480	1,257	290	933	70	21	6	43
2007	2,775	1,436	312	1,027	83	22	13	48
2008	2,489	1,398	270	821	97	33	15	49
2009	2,051	1,158	255	638	70	16	12	42
2010	2,323	1,173	286	864	77	17	12	48

Fire and Fire Death Rates

Hampden County had 5.0 fires per 1,000 population. That figure ranks Hampden County fifth in the state and tied with the state rate of 5.0 fires per 1,000 population. Hampden County also had 0.04 fire deaths per 10,000 population ranking it tied for eighth among Massachusetts counties and below the state rate of 0.05 fire deaths per 10,000 population.

2 Residents Died in 2 Hampden County Fires

- On June 23, 2010, at 9:38 p.m., the West Springfield Fire Department was called to a fatal arson fire in a shed. The fire was a suicide by self-immolation. The victim, a 47-year old man, doused himself and the shed with gasoline and ignited it. No one else was injured at this fire. Damages from the fire were not estimated.

- On October 19, 2010, at 5:54 p.m., the Springfield Fire Department was called to a fatal smoking fire in a single-family home. The victim, a 56-year old terminally ill woman, was smoking while using home oxygen. She was unable to attempt an escape and was overcome by the heat and smoke of the fire. She was transported to a local hospital where she later died from her injuries. Damages from the fire were estimated to be \$55,000.

Agawam Had Largest Loss Fire in Hampden County

- On November 21, 2010, at 3:47 a.m., the Agawam Fire Department responded to a fire at a 36-unit apartment building of undetermined cause. The fire began in the kitchen of a first floor unit. One firefighter was injured battling this fire. It was undetermined if detectors were present and the building was not sprinklered. Damages were estimated to be \$1.55 million.

STRUCTURE FIRES

Reported Structure Fires Up Slightly

The 1,173 structure fires caused both civilian deaths, 28 civilian injuries, 51 fire service injuries and an estimated dollar loss of \$10.7 million. These incidents represented 50% of Hampden County's reported fires in 2010. The average estimated dollar loss per structure fire was \$9,113. The total number of reported structure fires increased by 15, or 1%, from the 1,158 reported in 2009.

Arson Caused 1% of Structure Fires

The 17 structure arsons caused one civilian death, one civilian injury and an estimated dollar loss of \$83,225. Arson was indicated as the cause of 1% of the structure fires and 1% of Hampden County's structure fire dollar loss. The 17 structure arsons accounted for 22% of the Hampden County arson fires reported in 2010. The total number of reported structure arsons increased by one, or 6%, from 16 in 2009.

Almost 1/2 of Structure Arsons Occurred in Residences

Forty-seven percent (47%) of Hampden County's 17 structure arsons occurred in residential occupancies. Thirty-five percent (35%) occurred in educational facilities; 12% happened in storage facilities; and 6% occurred in special properties.

BUILDING FIRES

There were 1,166 building fires of different types in Hampden County in 2010. These 1,166 building fires accounted for 99.3% of all structure fires in Hampden County.

83% of Hampden Building Fires Occurred in People's Homes

Nine hundred and sixty-five (965), or 83%, of Hampden County's 1,166 building fires occurred in residential occupancies. Forty-four (44) fires took place in public assembly properties, including restaurants and churches. Mercantile and business properties experienced 34 fires. Hospitals, prisons, and other institutional buildings experienced 29 fires. Special properties also had 29 fires. Twenty-seven (27) building fires took place on

educational properties. Twenty-five (25) fires took place in storage properties. Nine (9) fires took place in manufacturing and processing facilities. Three (3) fires occurred in industrial, utility, defense, agricultural or mining facilities in Hampden County in 2010.

RESIDENTIAL FIRES

Residential Building Fires Down Slightly

There were 965 reported residential building fires in Hampden County in 2010. These 965 fires are a decrease of 11, or 1%, from the 976 residential building fires reported in 2009.

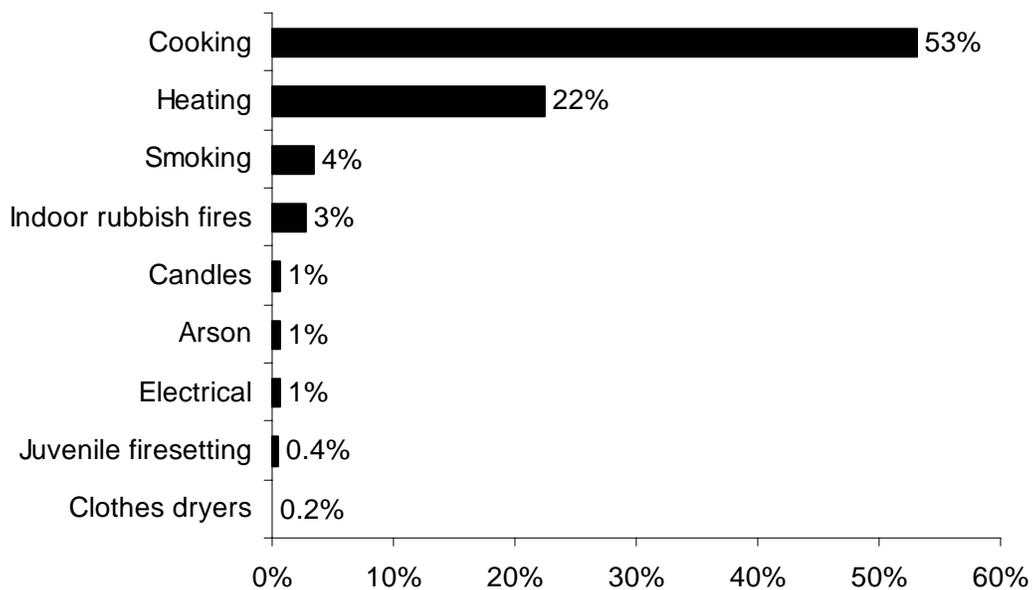

1- & 2-Family Homes Accounted for 1/2 of Residential Building Fires

The peak fixed property uses for residential building fires were 1- & 2-family homes, accounting for half, or 50%, of the building fires in Hampden County; 43% occurred in apartments; 2% happened in dormitories; 1% happened in residential board and care facilities; another 1% happened in hotels or motels; and 1% occurred in rooming houses. Eleven (11), or 1%, of the residential building fires in Hampden County occurred in unclassified residential buildings.

Cooking Causes 59% of Residential Fires

The leading cause of residential building fires in Hampden County was unattended cooking and other unsafe cooking practices, accounting for 53% of these fires. Heating was the second leading cause of fires in people’s homes, accounting for 22% of these fires. Smoking caused 4% of these fires and indoor rubbish fires caused 3%. Candles, Arson, Electrical, Juvenile firesetting, and Clothes dryers caused 1%, 1%, 1%, 0.4%, and 0.2% of these fires respectively.

2010 Leading Causes of Fires in Hampden County Homes

arsons and electrical problems each caused 1% of these residential fires. Juvenile-set fires and clothes dryers each caused less than 1% of the fires in Hampden County in 2010.

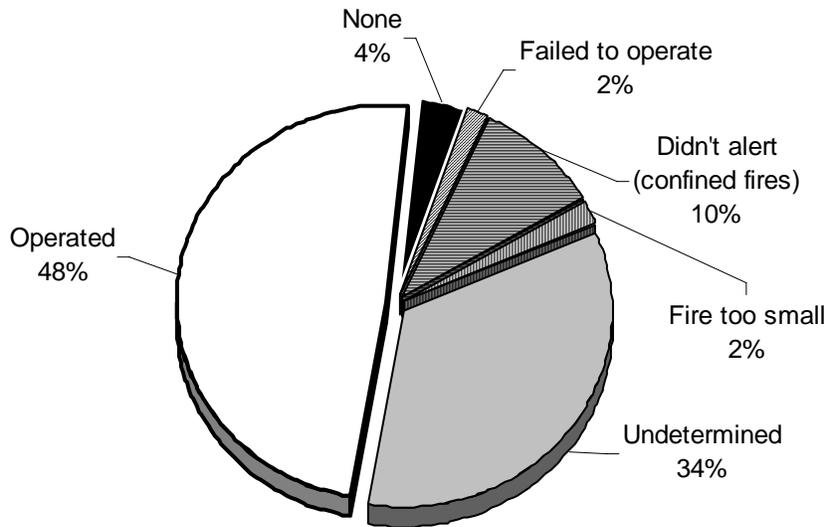

76% of Residential Building Fires Are Confined to Non-Combustible Containers¹

Seven hundred and twenty-nine (729), or 76% of all residential building fires, were reported as confined to non-combustible containers in 2010. Four hundred and eighty-four (484) of the reported fires were cooking fires contained to a non-combustible container accounting for half of residential building fires. One hundred and forty-two (142), or 15%, were fires confined to a fuel burner or boiler malfunction. Seventy-one (71), or 7%, of all residential building fires reported in 2010 were fires confined to a chimney. Twenty-six (26), or 3%, of these fires were contained rubbish fires. Five (5), or 1% of confined fires, occurred in incinerators; and one, or less than 1%, was confined to a commercial compactor.

Detectors Alerted Occupants in Almost 1/2 of Fires

Smoke or heat detectors operated and alerted the occupants in 471, or 48%, of the residential building fires. In 10% of these fires², the detectors did not alert the occupants. Detectors were present but did not operate in 2% of these incidents. In 4% of these fires, no detectors were present at all. The fire was too small to trigger the detector in 2% of the

Detector Status in Hampden County's Residential Structure Fires 2010

¹ In MFIRS v5 a fire in a building contained to a non-combustible container (Incident Type = 113-118) does not have to have a Fire Module completed. Therefore the following data fields do not need to be completed: Area of Origin, Detector Status, Item First Ignited, Heat Source, Factors Contributing to Ignition, Cause of Ignition, and Equipment Involved In Ignition. These incidents are not included in the analysis of these fields.

² These represent confined fires where it was reported that the detector did not alert the occupants.

residential fires. Smoke detector performance was undetermined in 330 incidents, or 34%, of Hampden County's residential building fires.

1/2 of Failed Detectors Had Dead, Missing or Disconnected Batteries

Of the 16 fires where smoke detectors were present but failed to operate, six, or 38%, failed because the batteries were either missing or disconnected. In two incidents, or 13%, the detectors failed because the batteries were dead. In one fire, or 6%, the detector failed because it was defective. Another detector, or 6%, failed from a lack of maintenance. Six (6), or 38%, of the detectors failed for unclassified or undetermined reasons.

VACANT BUILDINGS

3% of Building Fires Occurred in Vacant Buildings

Hampden County reported 38 fires that occurred in buildings that were vacant, under construction or demolition³. This represented 3% of the total 1,166 building fires reported to MFIRS in 2010. Twenty-eight (28) fires occurred in vacant residential properties. Five (5) fires in storage facilities were reported as vacant building fires. Mercantile and business properties accounted for two vacant building fires. Public assembly facilities, institutional facilities and an unclassified property each accounted for one vacant building fire in Hampden County in 2010.

None of the vacant building fires in Hampden County in 2010 were determined to be intentionally set.

JUVENILE-SET FIRES

16 Juvenile-set Fires Caused 1 Civilian Injury

There were 16 reported juvenile-set fires in Hampden County in 2010. The four structure fires, seven brush fires, one outside rubbish fire and one special outside fire caused one civilian injury and \$163,500 in estimated damages.

ARSONS

77 Total Arsons — 17 Structures, 12 Vehicles & 48 Other Arsons

Seventy-seven (77), or 3%, of Hampden County's 2,323 fires were considered intentionally set, or, for purposes of this analysis, arson⁴. The 17 structure arsons, 12

³ In version 4 a vacant building was defined by having a Fixed Property Use code in the subsection of construction, unoccupied properties, between 910 & 919. However in version 5, the Property Use is separate from the Building Status. In v5 a building is considered vacant if the Building Status is coded: 1- Under Construction; 3-Idle, not routinely used; 4-Under major renovation; 5-Vacant, secured; 6-Vacant, unsecured; & 7-Being demolished. The building use is coded separately in the Property Use field.

⁴ In MFIRS v5 a fire is considered an arson if the Cause of Ignition = 1 (Intentional) and the Age of Person (Fire Module) is greater than 17 or if the field is blank; or if the Wildland Module is used, the Wildland Fire Cause = 7 (Incendiary) and the Age of the Person (Wildland Module) is greater than 17 or if the field is left blank.

motor vehicle arsons and 48 outside and other arsons caused one civilian death⁵, one civilian injury, one fire service injury and an estimated dollar loss of \$382,900.

All Arson Up Slightly

The total number of reported arson fires increased by seven from the 70 reported in 2010. Structure arsons increased by one from the 16 reported in 2010. Motor vehicle arsons remained the same with 12 reported in both 2009 and 2010. Outside and other fires increased by six from the 42 reported the year before.

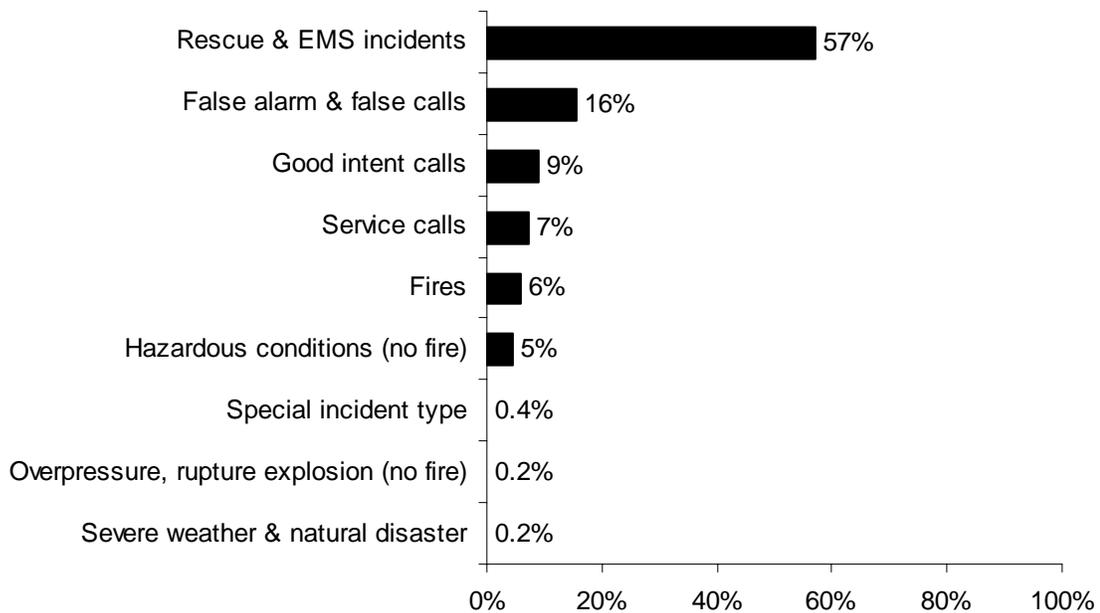

ALL INCIDENTS

Rescue & EMS Calls Are 57% of All Reported Responses

In 2010, fire departments in Hampden County reported 42,140 responses⁶ to MFIRS. Of these 42,140 incidents, 39,720 non-fire calls were voluntarily reported.

Of these 39,720 non-fire calls 24,059, or 57% of all reported responses in 2010, were reported rescue and emergency medical services (EMS) calls; 6,597, or 16%, were reported false alarm or false calls; 3,799, or 9%, were reported good intent calls; 3,001, or 7%, were reported service calls such as lock-outs, water or smoke problems, unauthorized burning or public service assistance; 1,953, or 5%, were reported hazardous

2010 Responses by Incident Type

⁵ This death was a suicide.

⁶ These figures include responses in which Hampden County fire departments gave mutual aid to other fire departments.

condition calls with no fire; 172, or 0.4%, were special incident type calls such as citizen complaints; 73, or 0.2%, were reported overpressure, rupture, explosion or overheat calls with no fire; and 66, or 0.02%, were severe weather responses.

Two thousand four hundred and twenty (2,420), or 6%, of the total responses submitted by Hampden County fire departments were fires.

Hampden County Fire Departments Gave Mutual Aid 735 Times

In 2010, Hampden County fire departments reported coming to the aid of other fire departments 735 times. Of these 735 responses, 468, or 64%, were for rescue or EMS calls; 95, or 13%, were for service calls such as cover assignments; 77, or 10%, were for fires; 39, or 5%, were for good intent calls; 37, or 5%, were for hazardous conditions calls with no fire; 18, or 2%, were for false alarms or false calls; and one, or less than 1%, was a severe weather or natural disaster call.

Hampden County Received Mutual Aid in 792 Incidents

In 2010, Hampden County fire departments reported receiving aid from surrounding departments in 792 incidents. Of these 792 incidents, 687, or 87%, were rescue and emergency medical services calls; 63, or 8%, were for fires; 13, or 2%, were false alarms or false calls; 11, or 1%, were service calls; nine, or 1%, were good intent calls; and another nine, or 1%, were hazardous conditions calls with no fire.

⁷ This field does not need to be completed for confined fires. Certain codes are inferred from the Incident Type.

⁸ These figures were calculated only from those incidents, which were coded as Unconfined fires (Incident Types 111-112 or 120-129). The USFA & NFPA do not recommend inferring codes for Heat Source from the fires contained to non-combustible containers (Incident Types 113 – 118). This field does not need to be completed for confined fires, but is sometimes voluntarily reported.

(Confined Fires in Non-Combustible Containers)**

Alerted occupants	51%
Didn't alert occupants	13%
Undetermined	36%

⁹ This field does not need to be completed for confined fires. Certain codes are inferred from the Incident Type.

¹⁰ Some fields in version 5 allow for multiple entries. Therefore the number of entries may be greater than the actual number of incidents being analyzed. These figures were calculated only from those incidents, which were coded as Unconfined fires (Incident Types 111-112 or 120-129). The USFA & NFPA do not recommend inferring codes for Factors Contributing to Ignition from the fires contained to non-combustible containers (Incident Types 113 – 118). This field does not need to be completed for confined fires.

¹¹ This field does not need to be completed for confined fires. Certain codes are inferred from the Incident Type.

¹²These figures were calculated only from those incidents, which were coded as Unconfined fires (Incident Types 111-112 or 120-129). The USFA & NFPA do not recommend inferring codes for Cause of Ignition from the fires contained to non-combustible containers (Incident Types 113 – 118). This field does not need to be completed for confined fires.

All non-fire responses or fire incidents without a dollar loss or human casualty are voluntarily reported to MFIRS. The Office of the State Fire Marshal strongly encourages any department that wants to send all of their responses to do so.

Chicopee Fires in 2010

246 Total Fires — 121 Structures, 24 Vehicles & 101 Other Fires

The Chicopee Fire Department reported 246 fires to the Massachusetts Fire Incident Reporting System (MFIRS) in 2010. The 121 structure fires, 24 motor vehicle fires, 60 brush fires, 25 outside rubbish fires, six special outside fires; and 10 unclassified fires caused nine civilian injuries, three firefighter injuries and an estimated dollar loss of \$540,585. There were no fire deaths in Chicopee in 2010.

Structure & Motor Vehicle Fires Up in 2010

Total fires increased by 22, or 10%, from the 224 incidents reported in 2009. Reported structure fires decreased by 10 from the 131 reported during the previous year. Motor vehicle fires decreased by two from 26 the year before. Outside and other fires increased by 34 from the 67 reported in 2009.

CHICOPEE FIRES FROM 2006 TO 2010

	Total Fires	Structure Fires	Vehicle Fires	Other Fires	Total Arsons	Structure Arsons	Vehicle Arsons	Other Arsons
2006	229	113	32	84	11	5	0	6
2007	264	153	26	85	14	5	0	9
2008	245	135	33	77	21	11	0	10
2009	224	131	26	67	11	4	1	6
2010	246	121	24	101	17	5	2	10

BUILDING FIRES

There were 121 building fires of different types in Chicopee in 2010. These 121 building fires accounted for all structure fires in Chicopee.

79% of Building Fires in Homes

The 121 building fires that occurred in Chicopee in 2010 can be broken down by fixed property use as follows: 96, or 79% of all building fires, were in residential properties; eight fires occurred in educational facilities; seven fires occurred in public assembly properties; three occurred in manufacturing or processing facilities; another three fires were reported to have occurred at storage facilities; three fires happened at industrial facilities; and one fire occurred in an institutional facility.

RESIDENTIAL FIRES

Residential Building Fires Down

There were 96 reported residential building fires in Chicopee in 2010. These 96 fires are a decrease of seven from the 103 reported residential building fires reported in 2009.

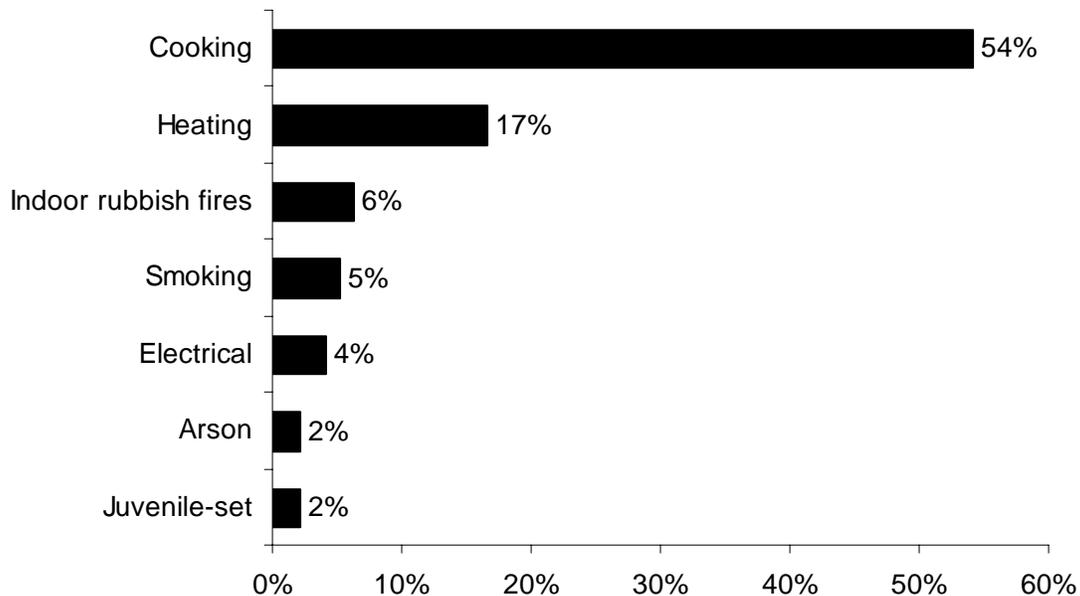

Apartments Accounted for Over 1/2 of Residential Building Fires

The peak fixed property uses for residential building fires were apartments, accounting for 51% of the building fires in Chicopee; 41% occurred in 1- or 2-family homes; 6% happened in hotels or motels; 1% happened in rooming houses; and another 1% occurred in residential board and care facilities.

Unattended Cooking Caused Over 1/2 of Residential Fires

The leading cause of residential building fires in Chicopee was unattended cooking and other unsafe cooking practices, accounting for 54% of these fires. Heating fires caused 17% of these fires. Indoor rubbish fires caused 6% of the fires. Smoking fires cause 5% and electrical problems were responsible for 4% of Chicopee's residential fires. Arsons, and juvenile-set fires were each the cause of 2% of the fires in Chicopee's residential occupancies in 2010.

2010 Leading Causes of Fires in Chicopee Homes

70% of Residential Building Fires Are Confined to Non-Combustible Containers¹

Sixty-seven (67), or 70% of all residential building fires were confined to non-combustible containers in 2010. Forty-seven (47), or 49%, of all residential building fires reported in 2010 were cooking fires contained to a non-combustible container. Ten (10),

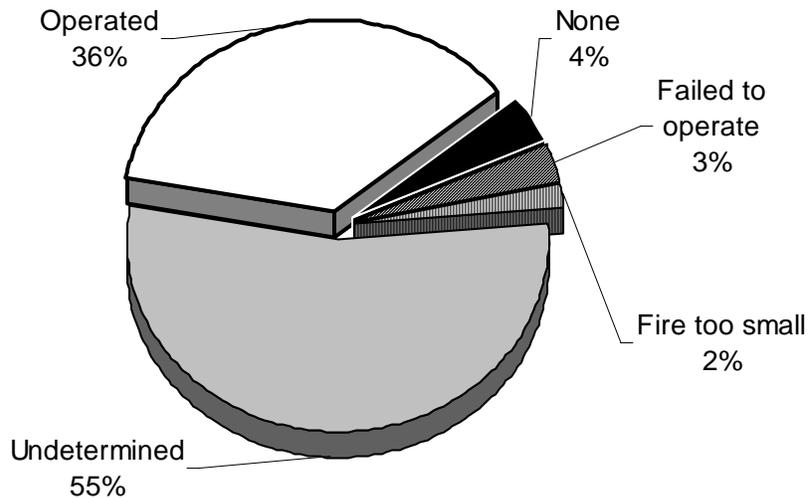

¹ In MFIRS v5 a fire in a building contained to a non-combustible container (Incident Type = 113-118) does not have to have a Fire Module completed. Therefore the following data fields do not need to be completed: Area of Origin, Detector Status, Item First Ignited, Heat Source, Factors Contributing to Ignition, Cause of Ignition, and Equipment Involved In Ignition. These incidents are not included in the analysis of these fields.

or 10%, were fires confined to a fuel burner or boiler malfunction. Six (6) fires, or 6%, were rubbish fires contained to a non-combustible container. Four (4) fires, or 4%, were reported to have been contained to a chimney or flue.

Detector Operation Undetermined in Over 1/2 of Fires

Smoke or heat detectors operated and alerted the occupants in 35, or 36%, of the residential building fires. There were no reported fires², where the detectors did not alert the occupants. There were no detectors in 4% of these fires. Detectors were present but did not operate in 3% of these incidents. The fire was too small to trigger the detector in 2% of these fires. Smoke detector performance was undetermined in 52 incidents, or 55% of Chicopee's residential building fires.

Detector Status in Chicopee's Residential Fires 2010

1 of 3 Detectors Failed From Missing Battery

Three (3) detectors failed in residential fires in Chicopee in 2010. One detector failed because it was missing a battery. Another detector failed because it was deemed defective. It was undetermined why the detector failed in the last fire.

² These represent confined fires where it was reported that the detector did not alert the occupants.

VACANT BUILDINGS

2% of Building Fires Occurred in Vacant Buildings

Chicopee reported three fires that occurred in buildings that were vacant, under construction or demolition³. This represented 2% of the total 121 building fires reported to MFIRS in 2010. Two (2) fires in one or two-family homes and one fire in an apartment building were reported as a vacant building fire incidents.

JUVENILE-SET FIRES

3 Juvenile-set Fires

Chicopee reported three juvenile-set fires in 2010. The two structure fires and one unclassified fire caused an estimated dollar loss of \$65,500.

ARSONS

17 Arsons⁴ - 5 Structure, 2 Motor Vehicle and 10 Outside & Other

Seventeen (17), or 7%, of Chicopee's 246 fires were considered intentionally set, or, for purposes of this analysis, arson. The five structure arsons, two motor vehicle arsons and 10 outside and other arsons caused an estimated dollar loss of \$36,250.

All Arsons Up in 2010

The total number of arsons increased by nine in 2010 from the eight reported arsons in 2009. Reported structure arsons increased by two from the three reported in 2009. Reported motor vehicle arsons increased by one from the one arson reported in 2009. Outside and other arsons increased by six from four reported the year before.

81 Fires Reported as Undetermined or Still Under Investigation

In 2010, Chicopee reported 81 fires under investigation or cause undetermined after investigation. Sixty-two (62), or 77%, of these fires were reported to be undetermined after investigation. The other 19, or 23%, were still under investigation.

Eighteen (18), or 22%, of these 81 fires were structure fires. Thirteen (13), or 16% were motor vehicle fires; and 50, or 62%, were outside or other fires. Because so many fires are under investigation or undetermined after investigation, the true arson number might be actually higher in Chicopee in 2010.

³ In version 4 a vacant building was defined by having a Fixed Property Use code in the subsection of construction, unoccupied properties, between 910 & 919. However in version 5, the Property Use is separate from the Building Status. In v5 a building is considered vacant if the Building Status is coded: 1- Under Construction; 3-Idle, not routinely used; 4-Under major renovation; 5-Vacant, secured; 6-Vacant, unsecured; & 7-Being demolished. The building use is coded separately in the Property Use field.

⁴ In MFIRS v5 a fire is considered an arson if the Cause of Ignition = 1 (Intentional) and the Age of Person (Fire Module) is greater than 17 or if the field is blank; or if the Wildland Module is used, the Wildland Fire Cause = 7 (Incendiary) and the Age of the Person (Wildland Module) is greater than 17 or if the field is left blank.

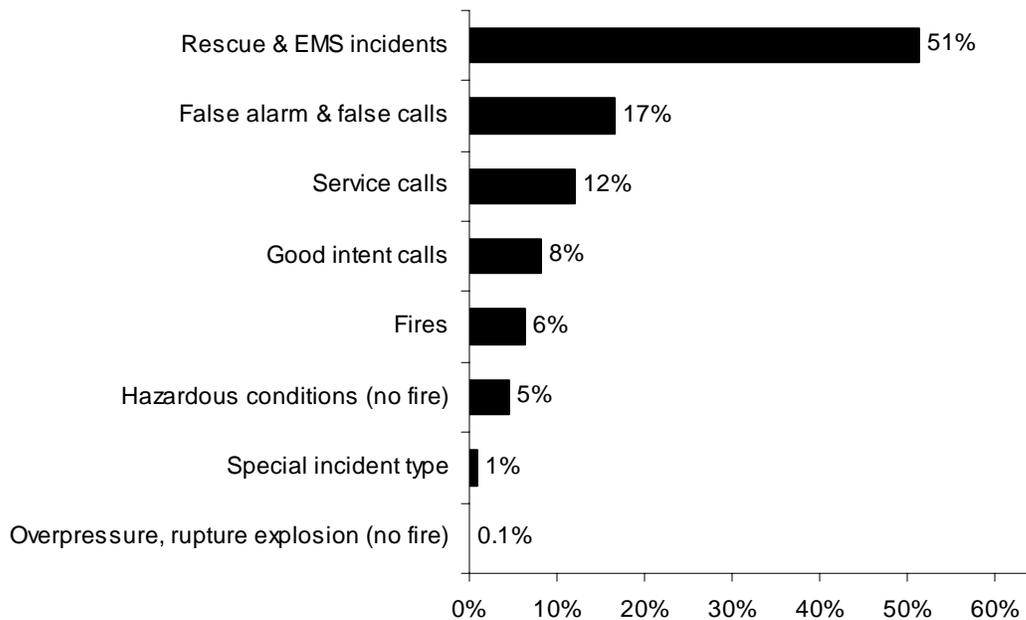

Rescue & EMS Calls Are 1/2 of All Reported Incidents

In 2010, Chicopee voluntarily reported 4,005 incidents to MFIRS. Of these 4,005 incidents, 3,753, or 94%, were non-fire incidents.

Of these 3,753 non-fire incidents 2,055, or 51% of all reported incidents in 2010, were reported rescue and emergency medical services (EMS) calls; 669, or 17%, were reported false alarm or false calls; 481, or 12%, were reported service calls such as lock-outs, water or smoke problem, unauthorized burning or public service assistance; 324, or 8%, were reported good intent calls; 183, or 5%, were reported hazardous condition calls with no fire; 37, or 1%, were special type incidents; and four, or 0.1%, were reported overpressure, rupture, explosion or overheat calls with no fire.

In 2010, Chicopee reported 252 fires, accounting for 6% of all reported incidents.

2010 Incidents by Incident Type

Chicopee Gave Mutual Aid in 17 Incidents

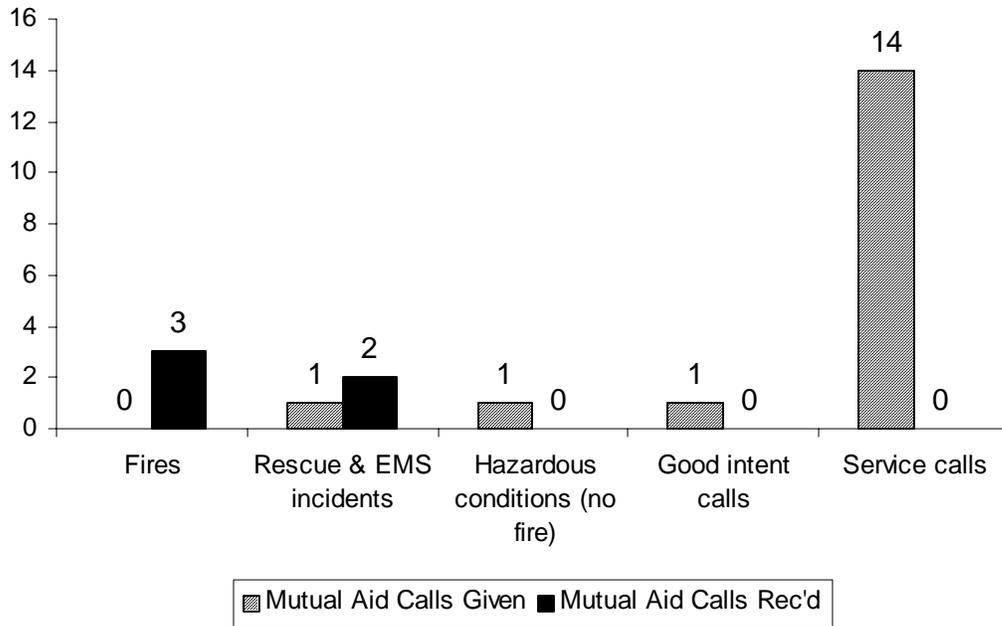

In 2010, Chicopee reported giving mutual aid to other surrounding fire departments in 17 incidents. Fourteen (14), or 82%, were for service calls such as station coverage; and one each, or 6% were a rescue or EMS call, a good intent call and a hazardous condition call with no fire.

Chicopee Received Mutual Aid in 5 Incidents

In 2010, surrounding fire departments gave aid to Chicopee in five incidents. Of these five incidents, three, or 60%, were fires; two, or 40%, were a rescue or EMS calls.

The following chart compares the number of calls that the Chicopee Fire Department gave mutual aid to a neighboring community compared to the number of calls that a neighboring community assisted Chicopee. In 2010 Chicopee gave aid to other fire departments almost three and a half times as much as they were asked for it.

⁷ This field does not need to be completed for confined fires. Certain codes are inferred from the Incident Type.

⁸ Some fields in version 5 allow for multiple entries. Therefore the number of entries may be greater than the actual number of incidents being analyzed. These figures were calculated only from those incidents, which were coded as Unconfined fires (Incident Types 111-112 or 120-129). The USFA & NFPA do not recommend inferring codes for Factors Contributing to Ignition from the fires contained to non-combustible containers (Incident Types 113 – 118). This field does not need to be completed for confined fires.

⁹ This field does not need to be completed for confined fires. Certain codes are inferred from the Incident Type.

¹⁰ These figures were calculated only from those incidents, which were coded as Unconfined fires (Incident Types 111-112 or 120-129). The USFA & NFPA do not recommend inferring codes for Cause of Ignition from the fires contained to non-combustible containers (Incident Types 113 – 118). This field does not need to be completed for confined fires.

¹¹ This includes the fires that Fitchburg responded to outside of their jurisdiction as mutual aid given.

Springfield Fires in 2010

1,053 Total Fires — 613 Structures, 108 Vehicles & 332 Other Fires

The Springfield Fire Department reported 1,053 fires to the Massachusetts Fire Incident Reporting System (MFIRS) in 2010. The 613 structure fires, 108 motor vehicle fires, 155 outside trash fires, 127 brush fires, 19 special outside fires, four cultivated vegetation or crop fires, and 27 unclassified fires caused one civilian death, 15 civilian injuries, 46 fire service injuries and an estimated dollar loss of \$5.6 million.

1 Killed in 1 Fatal Fire in Springfield

- On October 19, 2010, at 5:54 p.m., the Springfield Fire Department was called to a fatal smoking fire in a single-family home. The victim, a 56-year old terminally ill woman was smoking while using home oxygen. She was unable to attempt an escape and was overcome by the heat and smoke of the fire. She was transported to a local hospital where she later died from her injuries. Damages from the fire were estimated to be \$55,000.

Structure & Outside Fires Up in 2010

Total fires increased by 93 from 960 incidents in 2009. Reported structure fires were up 30 from the 583 reported during the previous year. Motor vehicle fires decreased by one from 109 the year before. Outside and other fires increased by 64 from the 268 reported in 2009.

SPRINGFIELD FIRES FROM 2006 TO 2010

	Total Fires	Structure Fires	Vehicle Fires	Other Fires	Total Arsons	Structure Arsons	Vehicle Arsons	Other Arsons
2006	1,146	633	108	405	10	5	1	4
2007	1,311	741	129	441	15	3	10	2
2008	1,138	687	104	347	22	12	6	4
2009	960	583	109	268	15	7	6	2
2010	1,053	613	108	332	10	2	3	5

BUILDING FIRES

There were 608 building fires of different types in Springfield in 2010. These 608 building fires accounted for 99% of all structure fires in Springfield.

88% of Building Fires in Homes

The 608 building fires that occurred in Springfield in 2010 can be broken down by fixed property use as follows: 536, or 88% of all building fires, were in residential properties; 18 fires happened in mercantile or business properties; 16 fires occurred in institutional properties; 11 fires took place in public assembly properties; nine fires occurred in educational properties; eight fires occurred in storage properties; another eight fires occurred in special properties; one fire happened in a manufacturing or processing facility; and another fire occurred at an unclassified property use.

RESIDENTIAL FIRES

Residential Building Fires Up Slightly

There were 536 reported residential building fires in Springfield in 2010. These 536 fires are an increase of 18, or 3%, over the 518 residential building fires reported in 2009.

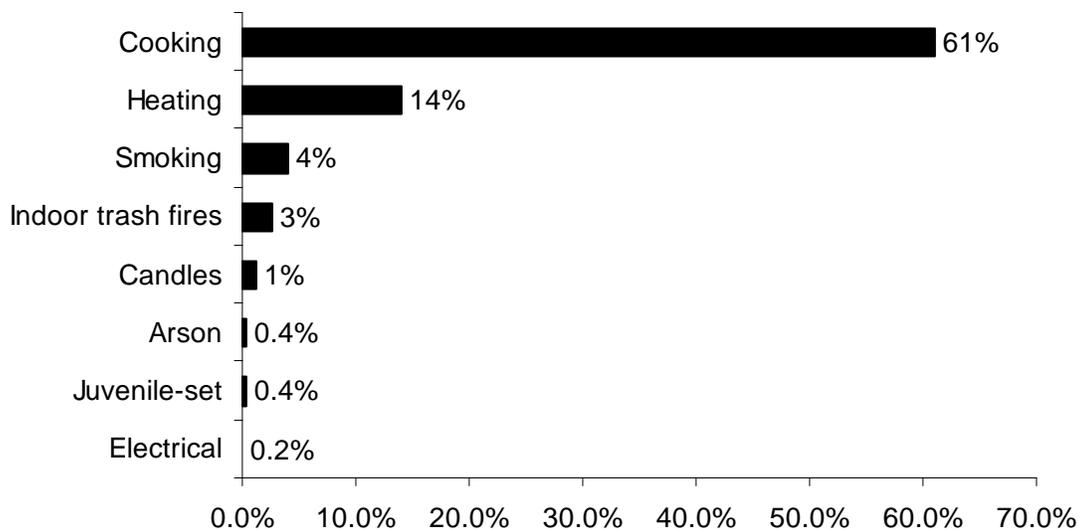

Apartments Accounted for 53% of Residential Building Fires

The peak fixed property uses for residential building fires were apartments, accounting for 53% of these building fires in Springfield; 40% occurred in 1- or 2-family homes; 2% occurred in residential board and care facilities; another 2% occurred in dormitories, 2% occurred in rooming houses; and less than 1% occurred in hotels or motels. Two percent (2%) occurred in unclassified residential buildings.

Unattended Cooking Leading Cause of Residential Fires

The leading cause of residential building fires in Springfield was unattended cooking and other unsafe cooking practices, accounting for 61% of these fires. Heating equipment accounted for 14% of the residential building fires in 2010. Smoking caused 4% of these fires. Indoor rubbish fires were responsible for 3%, and candles caused 1% of these fires. Arsons, juvenile-set fires and electrical problems each caused less than 1% of the fires in people's homes in Springfield in 2010.

2010 Leading Causes of Fires in Springfield Homes

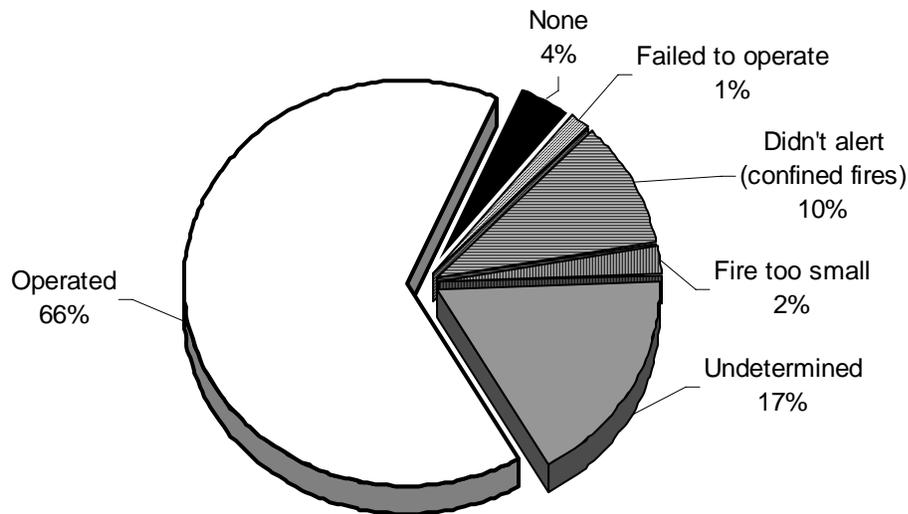

76% of Residential Building Fires Are Confined to Non-Combustible Containers¹

Four hundred and six (406), or 76% of all residential building fires were confined to non-combustible containers in 2010. Three hundred and twelve (312), or 58% of all residential building fires reported in 2010 were cooking fires contained to a non-combustible container. Seventy-two (72), or 13% of all residential fires were fuel burner or boiler malfunctions. Thirteen (13), or 2% of residential fires were rubbish fires contained to a non-combustible container. Five (5) incinerator overloads or malfunctions, accounted for 1% of these fires. Three (3) fires were confined to chimneys, which accounted for 1% of residential building fires, and one commercial compactor fire caused less than 1% of residential building fires in 2010.

Detectors Alerted Occupants in 2/3 of Fires

Smoke or heat detectors operated and alerted the occupants in 349, or 66%, of the residential building fires. In 10% of these fires², the detectors did not alert the occupants. Detectors were present but did not operate in 1% of these incidents. In 4% of these fires, no detectors were present at all. The fire was too small to trigger the detector in 1% of the residential fires. Smoke detector performance was undetermined in 93 incidents, or 17% of Springfield's residential building fires.

Detector Status in Springfield Residential Fires 2010

¹ In MFIRS v5 a fire in a building contained to a non-combustible container (Incident Type = 113-118) does not have to have a Fire Module completed. Therefore the following data fields do not need to be completed: Area of Origin, Detector Status, Item First Ignited, Heat Source, Factors Contributing to Ignition, Cause of Ignition, and Equipment Involved In Ignition. These incidents are not included in the analysis of these fields.

² These represent confined fires where it was reported that the detector did not alert the occupants.

Nearly 40% of Failed Detectors Had Missing Batteries

Of the eight fires where smoke detectors were present but failed to operate, three, or 38%, failed because the batteries were either missing or disconnected. One (1), or 13%, was due to a dead battery. In another incident, or 13%, a lack of maintenance accounted for the failure. It was undetermined in the other five, or 51%, cases why the detectors failed to operate.

VACANT BUILDINGS

25 Building Fires in Vacant Buildings

Springfield reported 25 fires that occurred in buildings that were vacant, under construction or demolition³. This represented 4% of the total 608 building fires reported to MFIRS in 2010. Sixteen (16) one- or two-family homes, three apartment buildings, two detached residential garages, one convenience store, one shed, one unclassified business and an unclassified structure were reported as vacant building fire incidents.

JUVENILE-SET FIRES

3 Juvenile-set Fires

There were three juvenile-set fires in Springfield in 2010. The two structure fires, and one unclassified fire caused \$98,000 in estimated damages.

ARSONS

10 Total Arsons⁴ — 2 Structures, 3 Motor Vehicles, & 5 Other

Ten (10), or 1%, of Springfield's 1,053 fires were intentionally set, or, for purposes of this analysis, arson. The two structure arsons, three motor vehicle arsons and five outside and other arsons caused an estimated dollar loss of \$17,150.

Structure & MV Arsons Down Slightly

The total number of arsons reported, 10, decreased by five from the 15 reported in 2009. Reported structure arsons decreased five from seven the year before. Motor vehicle arsons dropped by three from the six reported in 2009. Outside and other arsons increased one from the two reported last year.

Springfield reported 160, or 15%, of all fires are still under investigation or undetermined after investigation. This high number of fires with these classifications is one possible reason for the unusually low number of reported arsons in Springfield in 2010.

³ In version 4 a vacant building was defined by having a Fixed Property Use code in the subsection of construction, unoccupied properties, between 910 & 919. However in version 5, the Property Use is separate from the Building Status. In v5 a building is considered vacant if the Building Status is coded: 1- Under Construction; 3-Idle, not routinely used; 4-Under major renovation; 5-Vacant, secured; 6-Vacant, unsecured; & 7-Being demolished. The building use is coded separately in the Property Use field.

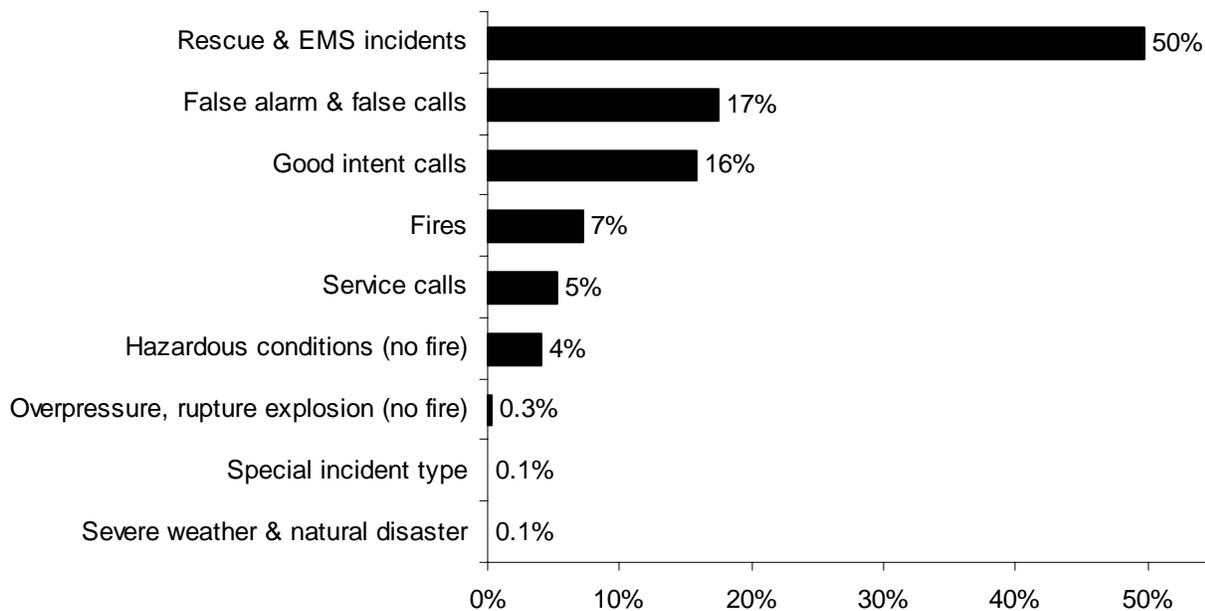

⁴ In MFIRS v5 a fire is considered an arson if the Cause of Ignition = 1 (Intentional) and the Age of Person (Fire Module) is greater than 17 or if the field is blank; or if the Wildland Module is used, the Wildland Fire Cause = 7 (Incendiary) and the Age of the Person (Wildland Module) is greater than 17 or if the field is left blank.

Rescue & EMS Calls Are 1/2 of All Reported Incidents

In 2010, Springfield voluntarily reported 14,737 incidents to MFIRS. Of these 14,737 incidents, 13,666, or 93% were non-fire incidents.

Of these 13,666 non-fire incidents 7,323, or 50%, were reported rescue and emergency medical services (EMS) calls; 2,569, or 17%, were reported false alarm or false calls; 2,321, or 16%, were reported good intent calls; 776, or 5%, were reported service calls such as lock-outs, water or smoke problem, unauthorized burning or public service assistance; 598, or 4%, were reported hazardous condition calls with no fire; 46, or 0.3%, were reported overpressure, rupture, explosion or overheat calls with no fire; 22, or 0.1%, were special incident type calls, such as citizen complaints; and 11, or 0.1%, were responses to severe weather.

2010 Incidents by Incident Type

In 2010, Springfield reported 1,071 fires⁵ to MFIRS, accounting for 7% of all reported incidents.

Springfield Gave Mutual Aid in 88 Reported Incidents

In 2010, Springfield reported giving mutual aid 88 times. Of these 88 incidents, 58, or 66%, were rescue or EMS incidents; eight, or 9%, were for cover assignments (service calls); seven, or 8% were false alarms; six, or 7%, were five, or 6%, were for fires; and four or 5% were good intent calls.

⁵ This figure includes fires that Springfield responded to calls of mutual aid outside of their jurisdiction.

Springfield Received Mutual Aid in 17 Incidents

In 2010, Springfield reported receiving mutual aid from surrounding fire departments in 17 incidents. Of these 17 incidents, seven, or 41%, were for rescue or EMS incidents; three, or 18%, were for good intent calls; another three, or 18%, were for fires; two, or 12%, were hazardous condition calls without fire; one, or 6%, was a service call; and one, or 6%, was for a false alarm.

⁸ This field does not need to be completed for confined fires. Certain codes are inferred from the Incident Type.

⁹ Some fields in version 5 allow for multiple entries. Therefore the number of entries may be greater than the actual number of incidents being analyzed. These figures were calculated only from those incidents, which were coded as Unconfined fires (Incident Types 111-112 or 120-129). The USFA & NFPA do not recommend inferring codes for Factors Contributing to Ignition from the fires contained to non-combustible containers (Incident Types 113 – 118). This field does not need to be completed for confined fires.

¹⁰ This field does not need to be completed for confined fires. Certain codes are inferred from the Incident Type.

¹¹ These figures were calculated only from those incidents, which were coded as Unconfined fires (Incident Types 111-112 or 120-129). The USFA & NFPA do not recommend inferring codes for Cause of Ignition from the fires contained to non-combustible containers (Incident Types 113 – 118). This field does not need to be completed for confined fires.

¹² This figure contains calls for mutual aid assistance.

2010 Fires

MFIRS
Massachusetts Fire Incident Reporting System

Massachusetts Fire Incident Reporting System 2010

Hampshire County Fires in 2010

560 Total Fires — 236 Structures, 59 Vehicles & 265 Other Fires

Hampshire County ranked eleventh out of the fourteen Massachusetts counties in total reported fires. Hampshire County fire departments reported 560 fires to the Massachusetts Fire Incident Reporting System (MFIRS) in 2010. The 236 structure fires, 59 motor vehicle fires, 143 brush, tree or lawn fires, 70 outside rubbish fires, 18 special outside fires, one cultivated vegetation or crop fire and 33 other fires caused one civilian death, nine civilian injuries, two fire service injuries and an estimated dollar loss of \$3.2 million. Hampshire County's 560 total reported fires accounted for 2% of the 32,680 fires reported to MFIRS in 2010.

All 21 fire departments in Hampshire County either reported incidents to the Massachusetts Fire Incident Reporting System (MFIRS) or certified that they had no reportable fires in 2010.

Structure Fires Down Slightly

The total number of reported fire incidents increased by 25 from the 535 reported in 2009. Reported structure fires decreased by 10 from the 246 reported during the previous year. Motor vehicle fires increased by one from 58 the year before. The number of outside and other fires increased by 34 from 231 in 2009.

HAMPSHIRE COUNTY FIRES FROM 2006 TO 2010

Year	Total Fires	Structure Fires	Vehicle Fires	Other Fires	Total Arsons	Structure Arsons	Vehicle Arsons	Other Arsons
2006	664	224	67	373	82	5	3	74
2007	635	287	54	294	34	7	0	27
2008	537	233	45	259	54	1	2	51
2009	535	246	58	231	45	7	8	30
2010	560	236	59	265	43	9	1	33

Fire and Fire Death Rates

Hampshire County had 3.5 fires per 1,000 population. That figure ranks Hampshire County thirteenth in the state and below the state rate of 5.0 fires per 1,000 population. Hampshire County also had 0.06 fire deaths per 10,000 population, ranking it tied for fifth among Massachusetts counties and just above the state rate of 0.05 fire deaths per 10,000 population.

1 Hampshire County Resident Killed in 1 Fire

- On July 11, 2010, at 12:19 p.m., the Chesterfield Fire Department was called to a fatal fire in an orchard structure. The victim, a 91-year old man, was working on pipes in the building with a propane torch when he accidentally ignited his clothing. He had burns over his entire body. He died enroute while being airlifted to a Boston hospital. No one else was injured at this fire. Detectors were not present and the building did not have any sprinklers. Damages from the blaze were not estimated.

Hadley Has Hampshire County's Largest Loss Fire

- On February 4, 2010, at 6:37 a.m., the Hadley Fire Department was called to an electrical fire at a livestock production facility. The fire began on the first floor. One firefighter was injured at this fire. Detectors were not present and the building was not sprinklered. The fire spread to two other buildings nearby. Damages from the blaze and the two exposure fires were estimated to be \$860,000.

STRUCTURE FIRES**Reported Structure Fires Down Slightly**

The 236 structure fires caused one civilian death, seven civilian injuries, two fire service injuries and an estimated dollar loss of \$3 million. These incidents represented 42% of Hampshire County's reported fires in 2010. The average estimated dollar loss per structure fire was \$12,743. The total number of reported structure fires increased by 10, or 4%, from the 246 reported in 2009.

9 Structure Arsons

The nine structure arsons caused one civilian injury and an estimated dollar loss of \$88,000. Arson was indicated as the cause of 4% of the structure fires and 3% of Hampshire County's structure fire dollar loss. The nine structure arsons accounted for 21% of the Hampshire County arson fires reported in 2010. The total number of reported structure arsons increased by two, or 29%, from seven in 2009.

2/3 of Structure Arsons Occurred in Residences

Sixty-seven percent (67%) of Hampshire County's nine structure arsons occurred in residential occupancies. Two (2) storage facilities accounted for 22% and one adult education facility was responsible for 11% of the structure arsons in Hampshire County in 2010.

BUILDING FIRES

There were 229 building fires of different types in Hampshire County in 2010. These 229 building fires accounted for 97% of all structure fires in Hampshire County.

81% of Hampshire Building Fires Occurred in People's Homes

One hundred and eighty-six (186), or 81%, of Hampshire County's 229 building fires occurred in residential occupancies. Nine (9) fires took place in public assembly properties, including restaurants and churches, and another nine in educational facilities. Hospitals, prisons, and other institutional buildings and storage facilities each experienced six fires. Mercantile and business properties, industrial facilities, and special properties such as outbuildings or sheds each had four fires. One fire in Hampshire County in 2010 occurred in a manufacturing or processing facility and another building fire happened in an industrial facility.

RESIDENTIAL FIRES

Residential Building Fires Down

There were 186 reported residential building fires in Hampshire County in 2010. This is a decrease of 13 fires, or 7%, from the 199 residential fires Hampshire County fire departments reported to MFIRS in 2009.

1- & 2-Family Homes Accounted for 62% of Residential Building Fires

The peak fixed property uses for residential building fires were 1- & 2-family homes, accounting for 62% of the residential building fires in Hampshire County; 19% occurred in apartments; 14% occurred in dormitories; 2% each occurred in rooming houses and hotels or motels; and 1% happened in residential board and care facilities. One percent (1%) of the residential building fires in Hampshire County occurred in unclassified residential buildings.

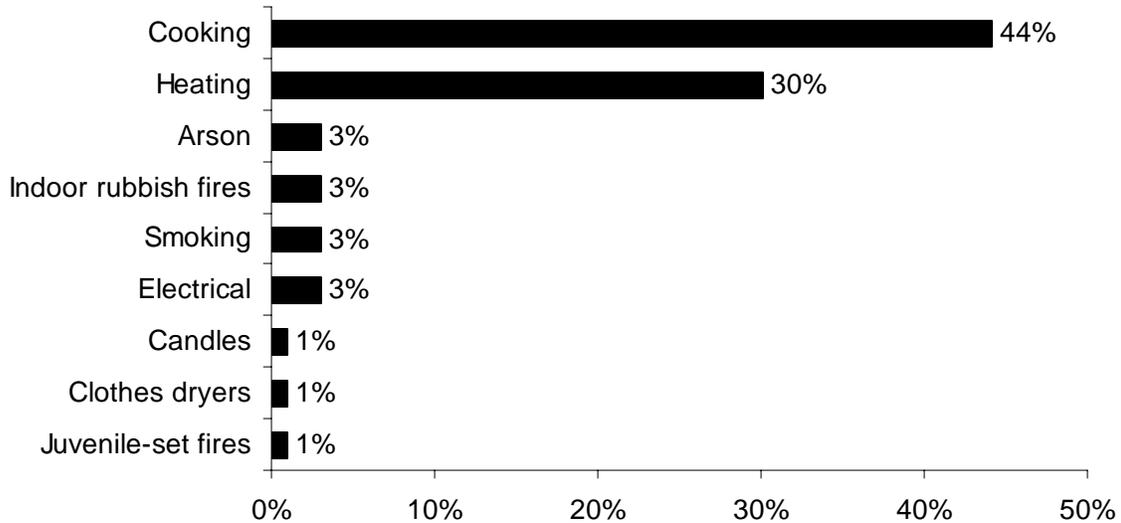

Although much of Hampshire County is rural, the county is home to several colleges and the main campus of the University of Massachusetts. Twenty-six (26), or 14%, of Hampshire County's residential fires occurred in dormitories. Dormitory fires make up smaller percentages of the other counties' fires. In 2010, one of the structure arsons in Hampshire County occurred in a dormitory.

Cooking Causes 44% of Residential Fires

Unattended cooking and other unsafe cooking practices was the leading cause of the 186 residential building fires in Hampshire County, accounting for 44% of these fires. Heating equipment fires accounted for 30% of home fires. Arson, smoking, indoor rubbish fires, and electrical problems each caused 3% of the residential fires. Candles, clothes dyers and juvenile-set fires each accounted for 1% of the fires in Hampshire County in 2010.

During the past five years, cooking and heating equipment have both been the leading cause of Hampshire County's residential fires. In 2008 and in 2007 heating was the leading cause of residential fires in Hampshire and cooking was the second leading cause. In 2006, 2009 and 2010 cooking fires were the leading cause of residential fires and heating fires were the second leading cause.

2010 Leading Causes of Fires in Hampshire County Homes

70% of Residential Building Fires Are Confined to Non-Combustible Containers¹

One hundred and thirty-one (131), or 70%, of all residential building fires were reported as confined to non-combustible containers in 2010. Seventy-five (75) of the reported fires were cooking fires contained to a non-combustible container, accounting for 40% of residential building fires. Thirty-eight (38), or 20%, of all residential building fires reported in 2010 were fires confined to a chimney. Thirteen (13), or 7%, were fires confined to a fuel burner or boiler malfunction. Five (5), or 3%, of these fires were rubbish fires contained to a non-combustible container in Hampshire County in 2010.

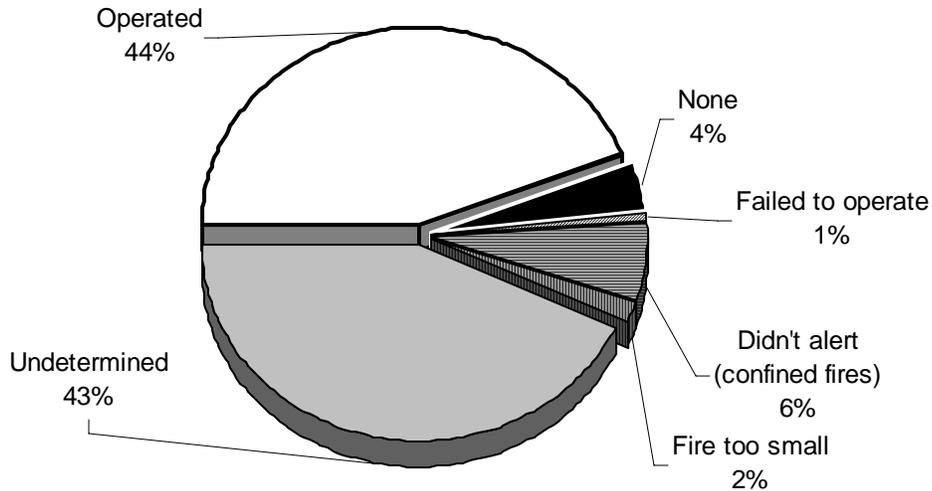

Undetermined if Detectors Operated in 43% of Fires

Smoke or heat detectors operated and alerted the occupants in 82, or 44%, of the residential building fires. In 6% of these fires², the detectors did not alert the occupants. Detectors were present but did not operate in 1% of these incidents. In 4% of these fires, no detectors were present at all. The fire was too small to trigger the detector in 2% of the residential fires. Smoke detector performance was undetermined in 80 incidents, or 43%, of Hampshire County's residential building fires.

¹ In MFIRS v5 a fire in a building contained to a non-combustible container (Incident Type = 113-118) does not have to have a Fire Module completed. Therefore the following data fields do not need to be completed: Area of Origin, Detector Status, Item First Ignited, Heat Source, Factors Contributing to Ignition, Cause of Ignition, and Equipment Involved In Ignition. These incidents are not included in the analysis of these fields.

² These represent confined fires where it was reported that the detector did not alert the occupants.

Detector Status in Hampshire County's Residential Structure Fires 2010

Both Failed Detectors Were Installed Incorrectly

In both of the fires where smoke detectors were present but failed to operate, they failed because of improper installation or placement.

VACANT BUILDINGS

5% of Building Fires Occurred in Vacant Buildings

Hampshire County reported four fires that occurred in buildings that were vacant, under construction or demolition³. This represented 5% of the total 229 building fires reported to MFIRS in 2010. Five (5) of these vacant building fires occurred in residential occupancies. Three (3) occurred in storage facilities. A public assembly facility, an educational facility and a special property each had one vacant building fire in Hampshire County in 2010.

Two (2), or 18%, of the vacant building fires in Hampshire County in 2010 were determined to be intentionally set. One (1) of these occurred in an adult education center while the other one occurred in a warehouse.

³ In version 4 a vacant building was defined by having a Fixed Property Use code in the subsection of construction, unoccupied properties, between 910 & 919. However in version 5, the Property Use is separate from the Building Status. In v5 a building is considered vacant if the Building Status is coded: 1- Under Construction; 3-Idle, not routinely used; 4-Under major renovation; 5-Vacant, secured; 6-Vacant, unsecured; & 7-Being demolished. The building use is coded separately in the Property Use field.

JUVENILE-SET FIRES

2 Juvenile-set Fires

There were two reported juvenile-set fires in Hampshire County in 2010. The two structure fires caused \$10,000 in estimated damages.

ARSONS

43 Total Arsons — 9 Structures, 1 Motor Vehicle & 33 Other Arsons

Forty-three (43), or 8%, of Hampshire County's 560 fires were intentionally set, or, for purposes of this analysis, arson⁴. The nine structure arsons, one motor vehicle arson and 33 outside and other arsons caused one civilian injury and an estimated dollar loss of \$88,142.

Motor Vehicle Arsons Down

The total number of reported arson fires decreased by two from the 43 reported in 2009. Structure arsons increased by two from the seven reported the previous year. Motor vehicle arsons decreased by seven from eight in 2009. Reported outside and other arsons increased by three from the 30 reported in 2009.

ALL INCIDENTS

Rescue & EMS Calls Are 60% of All Reported Responses

In 2010, Hampshire County fire departments reported 13,492 responses⁵ to MFIRS. Of these 13,492 incidents, 12,821 non-fire calls were voluntarily reported.

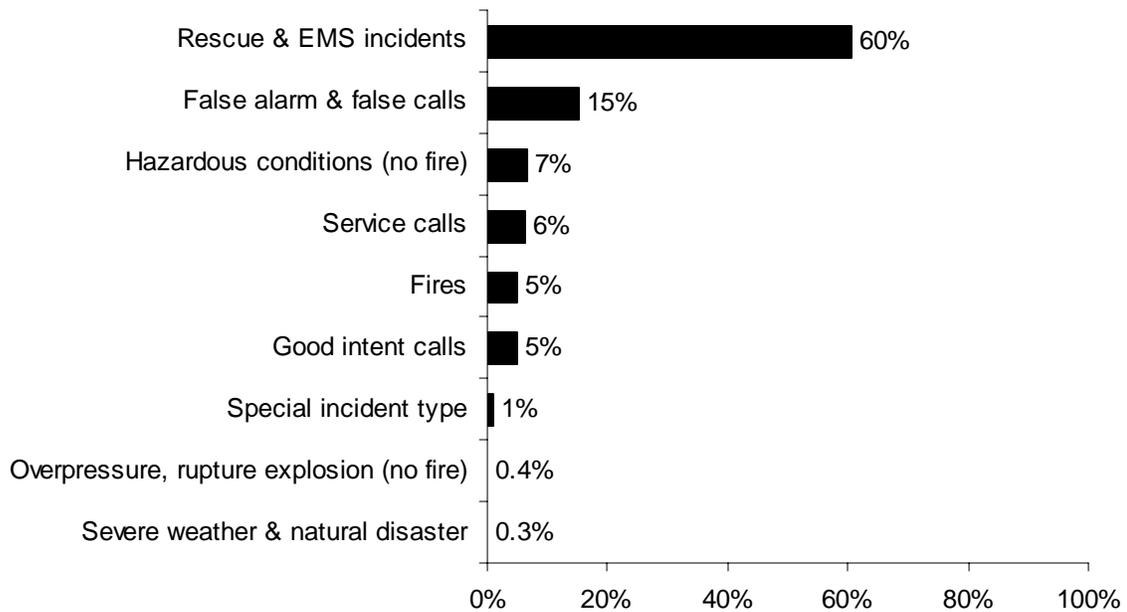

Of these 12,821 non-fire calls, 8,155, or 60% of all the responses reported in 2010, were reported rescue and emergency medical services (EMS) calls; 2,067, or 15%, were reported false alarm or false calls; 904, or 7%, were reported hazardous condition calls with no fire; 838, or 6%, were reported service calls such as lock-outs, water or smoke problems, unauthorized burning or public service assistance; 613, or 5%, were reported good intent calls; 151, or 1%, were special incident type calls such as citizen complaints; 57, or 0.4%, were reported overpressure, rupture, explosion or overheat calls with no fire; and 36, or 0.3%, were severe weather responses.

Six hundred and seventy-one (671), or 5%, of the total responses submitted by Hampshire County fire departments were fires.

⁴ In MFIRS v5 a fire is considered an arson if the Cause of Ignition = 1 (Intentional) and the Age of Person (Fire Module) is greater than 17 or if the field is blank; or if the Wildland Module is used, the Wildland Fire Cause = 7 (Incendiary) and the Age of the Person (Wildland Module) is greater than 17 or if the field is left blank.

⁵ These figures include responses in which Hampshire County fire departments gave mutual aid to other fire departments.

2010 Responses by Incident Type

Hampshire County Fire Departments Gave Mutual Aid 385 Times

In 2010, Hampshire County fire departments reported coming to the aid of other fire departments 385 times. Of these 385 responses, 167, or 43%, were for rescue or EMS calls; 107, or 28%, were for fires; 40, or 10%, were for service calls such as cover assignments; 26, or 4%, were for good intent calls; 22, or 6%, were for false alarms or false calls; 20, or 5%, were hazardous conditions calls with no fire; two calls, or 1%, were for special incident types; and one, or 0.3%, was a severe weather call.

Hampshire County Received Mutual Aid in 197 Incidents

In 2010, Hampshire County fire departments received aid from surrounding departments in 197 incidents. Of these 197 incidents, 119, or 60%, were rescue and emergency medical services calls; 60, or 30%, were for fires; nine, or 5%, were hazardous conditions calls with no fire; five, or 3%, were false alarm or false calls; four, or 2%, were service calls; and one was a good intent call accounting for 1% of the mutual aid calls received in Hampshire County in 2010.

Massachusetts Fire Incident Reporting System 2010

Middlesex County Fires in 2010

5,760 Total Fires — 3,405 Structures, 506 Vehicles & 1,849 Other Fires

Middlesex County ranked second out of the fourteen Massachusetts counties in total reported fires. Middlesex County fire departments reported 5,760 fires to the Massachusetts Fire Incident Reporting System (MFIRS) in 2010. The 3,405 structure fires, 506 motor vehicle fires, 1,022 brush fires, 465 outside rubbish fires, 150 special outside fires, three cultivated vegetation or crop fires, and 209 unclassified fires caused eight civilian deaths, 81 civilian injuries, 127 fire service injuries and an estimated dollar loss of \$42 million. Middlesex County's fires accounted for 18% of the 32,680 Massachusetts fires reported in 2010.

All 55, or 100%, of the fire departments in Middlesex County either reported incidents to the Massachusetts Fire Incident Reporting System (MFIRS) or certified that they had no reportable fires in 2010.

All Fires Up

The total number of reported fire incidents increased by 599 from the 5,161 reported in 2009. Reported structure fires increased slightly by 16 from 3,389 in the previous year. Motor vehicle fires increased by three from the 503 reported during 2009. Reported outside and other fires increased by 580 from 1,269 the year before.

MIDDLESEX COUNTY FIRES FROM 2006 TO 2010

Year	Total Fires	Structure Fires	Vehicle Fires	Other Fires	Total Arsons	Structure Arsons	Vehicle Arsons	Other Arsons
2006	5,344	3,171	564	1,609	171	52	24	95
2007	5,758	3,207	569	1,982	173	63	16	94
2008	5,323	3,447	512	1,364	168	40	27	101
2009	5,161	3,389	503	1,269	167	39	28	100
2010	5,760	3,405	506	1,849	161	44	13	104

Fire and Fire Death Rates

Middlesex County had 3.8 fires per 1,000 population. That figure ranks Middlesex County eleventh in the state and below the state rate of 5.0 fires per 1,000 population. Middlesex County also had 0.05 fire deaths per 10,000 population ranking it seventh among Massachusetts counties and tied with the state rate of 0.05 fire deaths per 10,000 population.

6 Fatal Fires Killed 8 Middlesex County Residents

- On March 10, 2010, at 9:18 p.m., the Everett Fire Department was called to a fatal smoking fire in a two-family home. The victims were an 80-year old physically disabled woman, and her 76-year old physically disabled brother. The fire was started by someone carelessly disposing of a cigarette on the first floor front porch. Home oxygen was present and may have contributed to the fire spreading so quickly. A

state police sergeant tried to get the brother to escape the fire, but he wouldn't leave his sister. She died in the fire and he was transported to a local hospital where he later died from smoke inhalation. There were no detectors present and the building was not sprinklered. No one else was injured in this fire. Damages were estimated to be \$250,000.

- On April 13, 2010, at 4:47 a.m. the Woburn Fire Department was called to a fatal smoking fire in a 98-unit apartment building. The 61-year old male victim was asleep at the time of the fire. He was transported to a local hospital where he succumbed to his injuries. No one else was injured at this fire. Detectors were present and alerted the other occupants of the building. There were no sprinklers. Damages from this fire were estimated to be \$60,000.
- On May 10, 2010, at 11:05 a.m., the Medford Fire Department was called to a fatal outside fire in a field. The fire was a suicide by self-immolation. The victim, a 47-year old man, poured gasoline on himself and ignited it. No one else was injured in this fire, and damages were not estimated.
- On October 10, 2010, at 4:00 a.m., the Lowell Fire Department was called to a fatal electrical fire at a 12-unit apartment building. The victims, a 23-year old man and a 47-year old man, were most likely sleeping at the time of the fire. No one else was injured at this fire. Detectors were present and alerted the other occupants to the fire. Sprinklers were not present. Damages were estimated to be \$571,100.
- On October 22, 2010, at 12:46 a.m., the Lowell Fire Department was called to a fatal fire in a lean-to of undetermined cause. The body of the victim, a 42-year old homeless man was discovered during overhaul operations. No one else was injured at this fire. Damages were not estimated.
- On November 25, 2010, at 12:37 a.m., the Waltham Fire Department was called to a fatal motor vehicle fire. Upon arrival, firefighters found the SUV fully involved and on its side in a culvert. The body of the victim, a John Doe, was discovered during operations. No one else was injured at this fire. Damages were estimated at \$20,000.

Largest Loss Fire in 2010

In 2010, Middlesex County fire departments reported five fires with a reported dollar loss of \$1 million or greater. The combined dollar loss of these five fires totaled \$9.3 million, or 22%, of the county's total dollar loss. Concord had two of these fires.

- On May 10, 2010, at 11:59 p.m., the Sudbury Fire Department was called to a fire of undetermined cause at a large greenhouse. The fire went to five alarms. No one was injured at this fire. Detectors and sprinklers were not present. Damages from this fire were estimated to be \$4.5 million.

STRUCTURE FIRES

Reported Structure Fires Up Slightly

The 3,405 structure fires caused six civilian deaths, 71 civilian injuries, 124 fire service injuries and an estimated dollar loss of \$39 million. These incidents represented 59% of Middlesex County's reported fires in 2010. The average estimated dollar loss per structure fire was \$11,456. The total number of reported structure fires increased by 16, or less than 1%, from the 3,389 reported in 2009.

Arson Caused of 1% of Structure Fires

The 44 structure arsons caused an estimated dollar loss of \$314,215. Arson was indicated as the cause of 1% of the structure fires and 1% of Middlesex County's structure fire dollar loss. The 44 structure arsons accounted for 27% of the Middlesex County arson fires reported in 2010. The total number of reported structure arsons increased by five, or 13%, from 39 in 2009.

Almost 1/2 of Structure Arsons Occurred in Residences

Forty-eight percent (48%) of Middlesex County's 44 structure arsons occurred in residential occupancies; public assembly facilities and educational facilities each accounted for 14% of these fires. Nine percent (9%) occurred in storage facilities; special properties were involved in 7%; and 2% happened in institution facilities. Mercantile or business facilities and industrial facilities each accounted for 2% of Middlesex County's structure arsons in 2010.

BUILDING FIRES

There were 3,381 building fires of different types in Middlesex County in 2010. These 3,381 building fires accounted for 99.3% of all structure fires in Middlesex County.

82% of Middlesex Building Fires Occurred in People's Homes

Two thousand seven hundred and eight-three (2,783), or 82%, of Middlesex County's 3,381 building fires occurred in residential occupancies. One hundred and thirty-six (136) fires took place in public assembly properties, including restaurants and churches. Mercantile and business properties had 132 fires. Hospitals, prisons, and other institutional buildings experienced 91 fires. Eighty-six (86) building fires in Middlesex County occurred in special properties such as outbuildings, bus stop shelters and tollbooths. Eighty (80) building fires took place in educational facilities. Forty-two (42) fires took place in storage properties. Eighteen (18) fires occurred in industrial, utility, defense, agricultural or mining facilities. Twelve (12) fires took place in manufacturing and processing facilities in Middlesex County in 2010.

RESIDENTIAL FIRES

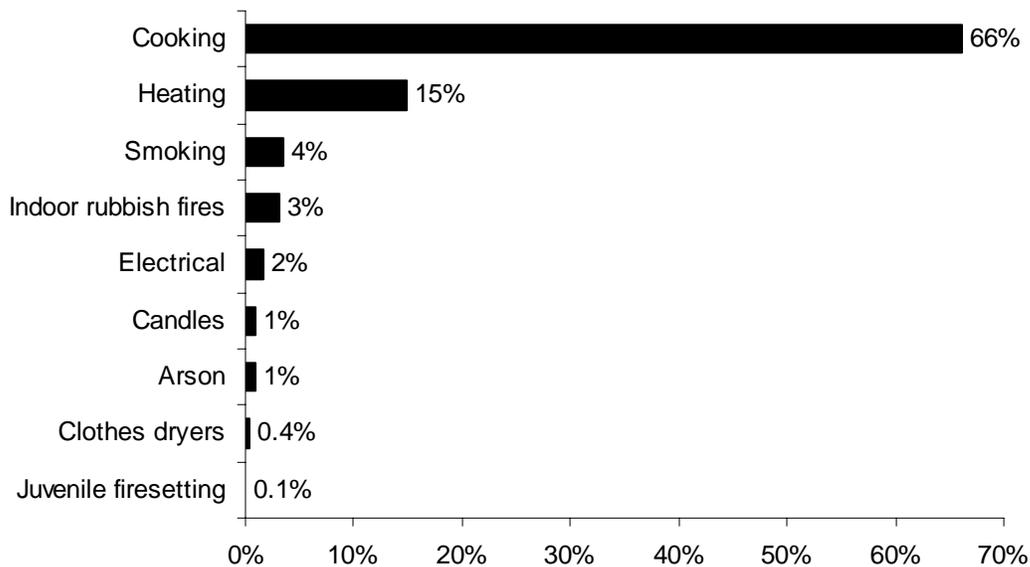

Residential Building Fires Are Up Slightly

There were 2,783 reported residential building fires in Middlesex County in 2010. These 2,783 fires are an increase of 28, or 1%, from the 2,755 residential building fires reported in 2009.

Unsafe Cooking Causes 2/3 of All Residential Fires

The leading cause of residential building fires in Middlesex County was unattended cooking and other unsafe cooking practices, accounting for 66% of these fires. Heating caused 15% of fires in people's homes. Smoking fires caused 4%. Indoor rubbish fires accounted for 3% of these fires. Electrical problems caused 2%. Candles and arsons each caused 1% of these fires, and clothes dryers and juvenile-set fires were each responsible for less than 1% of the residential fires in Middlesex County in 2010.

2010 Leading Causes of Fires in Middlesex County Homes

81% of Residential Building Fires Are Confined to Non-Combustible Containers¹

Two thousand two hundred and forty-four (2,244), or 81%, of all residential building fires were reported as confined to non-combustible containers in 2010. One thousand

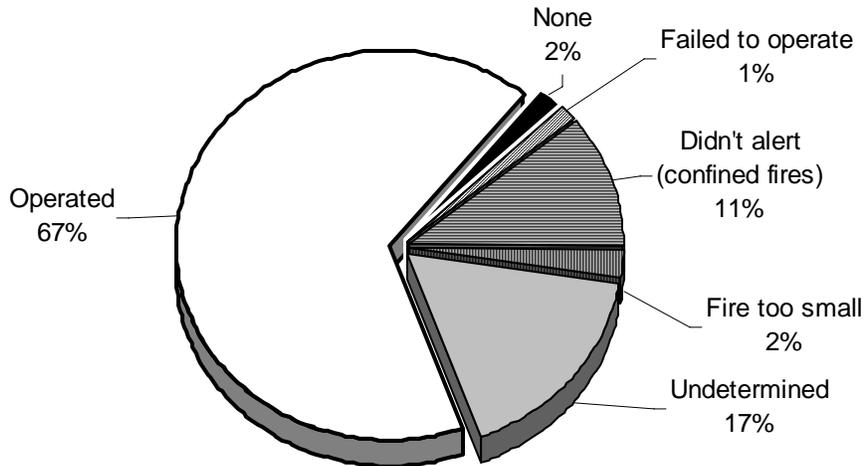

¹ In MFIRS v5 a fire in a building contained to a non-combustible container (Incident Type = 113-118) does not have to have a Fire Module completed. Therefore the following data fields do not need to be completed: Area of Origin, Detector Status, Item First Ignited, Heat Source, Factors Contributing to Ignition, Cause of Ignition, and Equipment Involved In Ignition. These incidents are not included in the analysis of these fields.

seven hundred and seventy-five (1,775) of the reported fires were cooking fires contained to a non-combustible container accounting for 64% of residential building fires. Two hundred and eighty-three (283), or 10%, were fires confined to a fuel burner or boiler malfunction. One hundred and four (104), or 4%, of all residential building fires reported in 2010 were fires confined to a chimney. Eighty (80), or 3%, of these fires were rubbish fires contained to a non-combustible container. One commercial compactor fire and one incinerator overload each accounted for less than 1% of the residential fires in Middlesex County in 2010.

Detectors Alerted Occupants in 2/3 of Fires

Smoke or heat detectors operated and alerted the occupants in 1,847, or 67%, of the residential building fires. In 11% of these fires², the detectors did not alert the occupants. Detectors were present but did not operate in 1% of these incidents. In 2% of these fires, no detectors were present at all. The fire was too small to trigger the detector in 2% of the residential fires. Smoke detector performance was undetermined in 474 incidents, or 17%, of Middlesex County’s residential building fires.

Detector Status in Middlesex County's Residential Structure Fires 2010

25% of Failed Detectors Had Dead, Missing or Disconnected Batteries

Of the 40 fires where smoke detectors were present but failed to operate, nine, or 25%, failed because the batteries were either missing or disconnected. Seven (7), or 18%, failed because of a power failure, shutoff or disconnect. Two (2), or 5%, did not operate because of dead batteries. Two (2) detectors, or 5%, failed from a lack of maintenance. One (1) unit, or 2%, failed because it was defective. It was undetermined or unclassified

² These represent confined fires where it was reported that the detector did not alert the occupants.

in 18 cases, or 45%, why the detectors failed to operate.

VACANT BUILDINGS

1% of Building Fires Occurred in Vacant Buildings

Middlesex County reported 36 fires that occurred in buildings that were vacant, under construction or demolition³. This represented 1% of the total 3,381 building fires reported to MFIRS in 2010. Twenty-three (23) fires occurred in vacant residential properties. Six (6) vacant building fires occurred in storage facilities. Public assembly facilities, mercantile and business properties and special properties each accounted for two vacant building fire incidents. Educational facilities accounted for one vacant building fire in Middlesex County in 2010.

Four (4), or 11%, of the vacant building fires in Middlesex County in 2010 were determined to be intentionally set. Two (2) of these fires occurred in single-family homes. The other two vacant building fires occurred in outbuildings.

JUVENILE-SET FIRES

16 Juvenile-set Fires

There were 16 reported juvenile-set fires in Middlesex County in 2010. The four structure fires, five brush fires, five outside rubbish fires, and two special outside fires caused an estimated \$135,120 in damages.

ARSONS

161 Total Arsons⁴ — 44 Structures, 13 Vehicles & 104 Other Arsons

One hundred and sixty-one (161), or 3%, of Middlesex County's 5,760 fires were considered intentionally set, or, for purposes of this analysis, arson. The 44 structure arsons, 13 motor vehicle arsons and 104 outside and other arsons caused one civilian death and an estimated dollar loss of \$434,805.

Motor Vehicle Arson Down

The total number of reported arson fires decreased by six from the 167 reported in 2009. Reported structure arsons increased by five from the 39 reported in the previous year.

³ In version 4 a vacant building was defined by having a Fixed Property Use code in the subsection of construction, unoccupied properties, between 910 & 919. However in version 5, the Property Use is separate from the Building Status. In v5 a building is considered vacant if the Building Status is coded: 1- Under Construction; 3-Idle, not routinely used; 4-Under major renovation; 5-Vacant, secured; 6-Vacant, unsecured; & 7-Being demolished. The building use is coded separately in the Property Use field.

⁴ In MFIRS v5 a fire is considered an arson if the Cause of Ignition = 1 (Intentional) and the Age of Person (Fire Module) is greater than 17 or if the field is blank; or if the Wildland Module is used, the Wildland Fire Cause = 7 (Incendiary) and the Age of the Person (Wildland Module) is greater than 17 or if the field is left blank.

Motor vehicle arsons decreased by 15 from the 28 in 2009. Reported outside and other arsons increased by four from 100 the year before.

ALL INCIDENTS

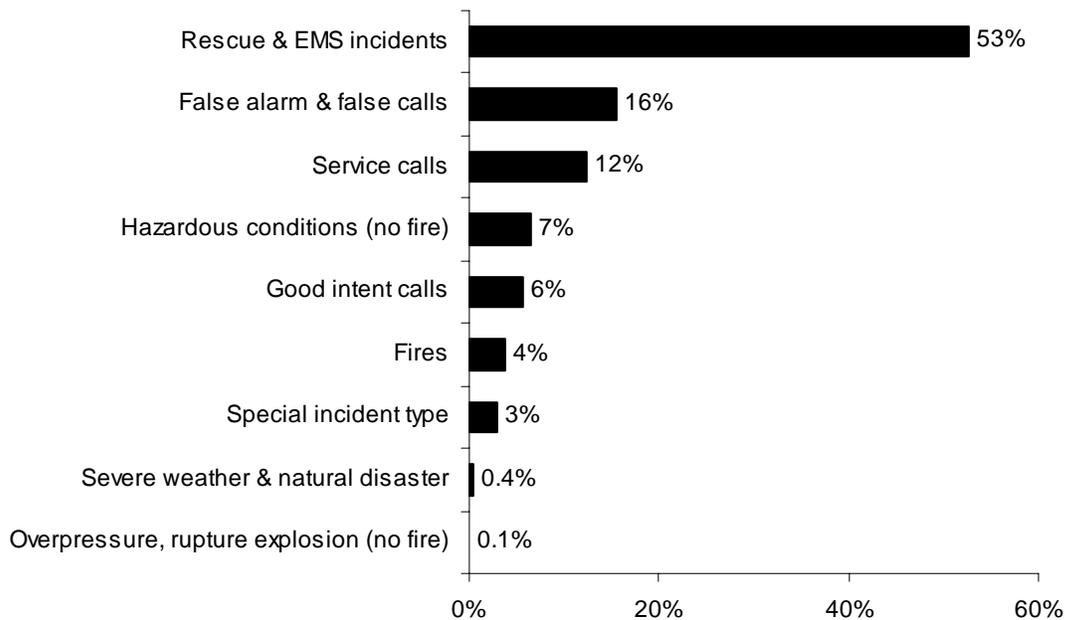

Rescue & EMS Calls Are Over 1/2 of All Reported Responses

In 2010, fire departments in Middlesex County reported 160,439 responses⁵ to MFIRS. This is a 5% increase over the 152,994 responses reported in 2009. Of these 160,439 incidents, 154,353 non-fire calls were voluntarily reported.

Of these 154,353 non-fire calls, 84,625, or 53%, of all the responses reported in 2010 were reported rescue and emergency medical services (EMS) calls; 24,932, or 16%, were reported false alarm or false calls; 19,842, or 12%, were reported service calls such as lock-outs, water or smoke problems, unauthorized burning or public service assistance; 10,596, or 7%, reported hazardous condition calls with no fire; 8,980, or 6%, were reported good intent calls; 4,635, 3%, were special incident type calls such as citizen complaints; 585, or 0.4%, were severe weather responses; and 158, or 0.1%, were reported overpressure, rupture, explosion or overheat calls with no fire.

Six thousand and eighty-six (6,086), or 4%, of the total responses submitted by Middlesex County fire departments were fires.

2010 Responses by Incident Type

⁵ These figures include incidents in which Middlesex County fire departments gave mutual aid to other fire departments.

Middlesex County Fire Departments Gave Mutual Aid 2,932 Times

In 2010, Middlesex County fire departments reported coming to the aid of other fire departments 2,932 times. Of these 2,932 responses, 1,351, or 46%, were for rescue or EMS calls; 733, or 25%, were for service calls such as cover assignments; 338, or 12%, were for good intent calls; 283, or 10%, were for fires; 119, or 4%, were for false alarms or false calls; 84, or 3%, were for hazardous conditions calls with no fire; 22, or 1%, were special incident types; one, or less than 1%, was for a reported overpressure, rupture, explosion or overheat call with no fire; and one, or less than 1%, was a severe weather call.

Middlesex County Received Mutual Aid in 1,972 Incidents

In 2010, Middlesex County fire departments reported receiving aid from surrounding departments in 1,917 incidents. Of these 1,917 incidents, 1,269, or 66%, were rescue and emergency medical services calls; 288, or 15%, were for fires; 200, or 10%, were false alarms or false calls; 55, or 3%, were hazardous conditions calls with no fire; 48, or 3%, were good intent calls; 46, or 2%, were service calls; six, or less than 1%, were severe weather calls; four, or less than 1%, were overpressure, rupture, explosion or overheat calls with no fire; and one, or less than 1%, was a special incident type.

Bedroom	2%	Arcing	2%	9%
Exterior balcony/unencl. porch	1%	Candle	1%	6%

⁶ This field does not need to be completed for confined fires. Certain codes are inferred from the Incident Type.

⁷ These figures were calculated only from those incidents, which were coded as Unconfined fires (Incident Types 111-112 or 120-129). The USFA & NFPA do not recommend inferring codes for Heat Source from the fires contained to non-combustible containers (Incident Types 113 – 118). This field does not need to be completed for confined fires, but is sometimes voluntarily reported.

Item First Ignited⁸	%	Factor Contrib. to Ignit.	%	%Unconfined⁹
Food, cooking materials	65%	Abandoned materials	2%	12%
Flammable, combustible liquid	10%	Too close to combustibles	2%	12%

Chimney or flue	5%	Act of nature	0.5%	2%
Clothes dryer	0.4%	Undetermined	2%	9%
		Cause under investigation	1%	7%

Detector Alerted Occupants (Confined Fires in Non-Combustible Containers)

Alerted occupants	69%
Didn't alert occupants	14%
Undetermined	17%

⁸ This field does not need to be completed for confined fires. Certain codes are inferred from the Incident Type.

⁹ Some fields in version 5 allow for multiple entries. Therefore the number of entries may be greater than the actual number of incidents being analyzed. These figures were calculated only from those incidents, which were coded as Unconfined fires (Incident Types 111-112 or 120-129). The USFA & NFPA do not recommend inferring codes for Factors Contributing to Ignition from the fires contained to non-combustible containers (Incident Types 113 – 118). This field does not need to be completed for confined fires.

¹⁰ This field does not need to be completed for confined fires. Certain codes are inferred from the Incident Type.

¹¹ These figures were calculated only from those incidents, which were coded as Unconfined fires (Incident Types 111-112 or 120-129). The USFA & NFPA do not recommend inferring codes for Cause of Ignition from the fires contained to non-combustible containers (Incident Types 113 – 118). This field does not need to be completed for confined fires.

Cambridge Fires in 2010

901 Total Fires — 782 Structures, 16 Vehicles & 103 Other Fires

The Cambridge Fire Department reported 901 fires to the Massachusetts Fire Incident Reporting System (MFIRS) in 2010. The 782 structure fires, 16 motor vehicle fires, 59 outside rubbish fires, 32 brush fires, 11 special outside fires, and one unclassified fire caused seven civilian injuries, 11 fire service injuries and an estimated dollar loss of \$1 million. There were no fire deaths in Cambridge in 2010.

Structure Fires Increased in 2010

Total fires increased by 27, or 3%, from 901 incidents reported in 2009. Reported structure fires increased by seven, or 1%, from the 775 reported during the previous year. Motor vehicle fires decreased one, or 6%, from 17 the year before. Outside and other fires increased by 21 from the 82 reported the year before; this is a decrease of 26%.

CAMBRIDGE FIRES FROM 2006 TO 2010

	Total Fires	Structure Fires	Vehicle Fires	Other Fires	Total Arsons	Structure Arsons	Vehicle Arsons	Other Arsons
2006	630	495	33	102	15	6	1	8
2007	669	523	20	126	7	5	0	2
2008	860	748	14	98	9	2	0	7
2009	874	775	17	82	4	0	0	4
2010	901	782	16	103	7	2	1	4

BUILDING FIRES

There were 782 building fires of different types in Cambridge in 2010. These 782 building fires accounted for all structure fires in Cambridge.

82% of Building Fires in Homes

The 782 building fires that occurred in Cambridge in 2010 can be broken down by fixed property use as follows: 641, or 82% of all structure fires, were in residential properties; 33 occurred in public assembly properties; 32 fires occurred in mercantile or business properties; 31 fires happened in educational facilities; 23 occurred in special properties; 16 fires took place in institutional properties; four occurred in industrial, utility, defense, agricultural or mining facilities; one occurred in a storage facility; and one fire happened at a manufacturing facility.

RESIDENTIAL FIRES

Residential Building Fires Are Up

There were 641 reported residential building fires in Cambridge in 2010. These 641 fires are an increase of five, or 1%, from the 636 residential building fires reported in 2009.

Apartments Accounted for Over 1/2 of Residential Building Fires

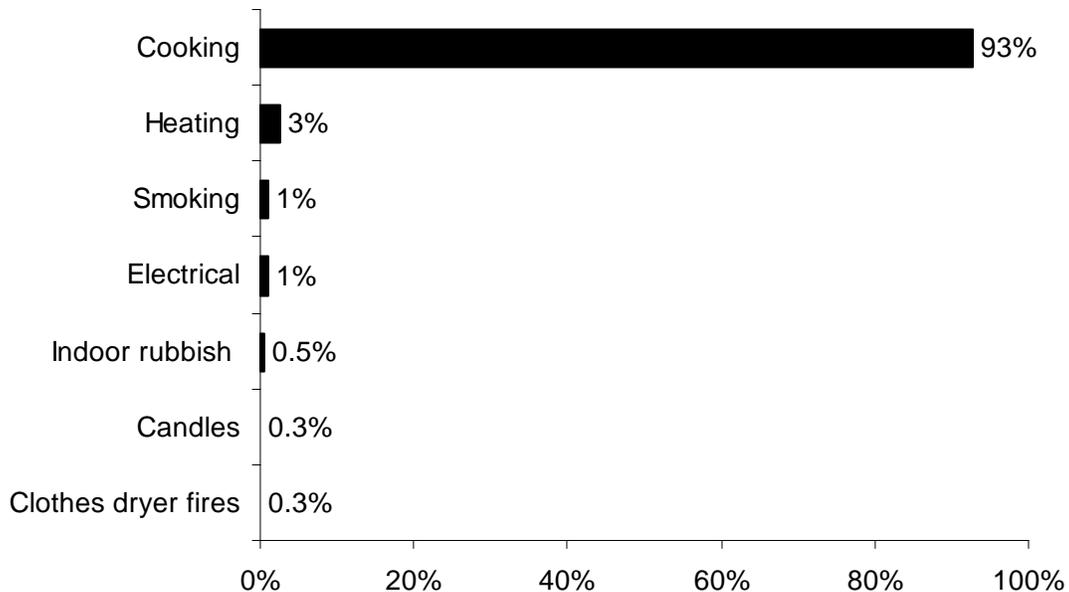

The peak fixed property uses for residential building fires were apartments, accounting for 56% of the residential building fires in Cambridge; 20% occurred in dormitories; 12% occurred in 1- or 2-family homes; 2% happened in rooming houses; another 2% occurred in hotels or motels; less than 1% happened in residential board and care facilities; and 8% occurred in unclassified residences.

Cambridge is home to several colleges and universities, Massachusetts Institute of Technology and Harvard University among them. This is the main reason dormitory fires make up such a high percentage of Cambridge's residential fires.

Unattended Cooking Caused 93% of Residential Fires

The leading cause of residential building fires in Cambridge was unattended cooking and other unsafe cooking practices, accounting for 93% of these fires. Heating equipment caused 3% of the residential fires in Cambridge. Smoking and electrical fires each caused 1% of these fires. Indoor rubbish fires, candles and clothes dryers each caused less than 1% of the fires in Cambridge homes in 2010.

2010 Leading Causes of Fires in Cambridge Homes

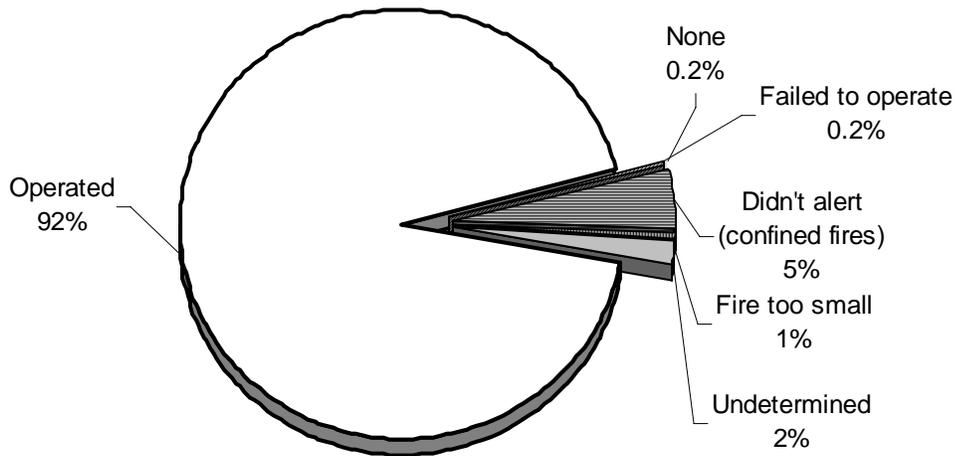

95% of Residential Building Fires Are Confined to Non-Combustible Containers¹

Six hundred and eight (608), or 95% of all residential building fires were confined to non-combustible containers in 2010. Five hundred and eighty-nine (589), or 92%, of all residential building fires reported in 2010 were cooking fires contained to a non-combustible container. Fifteen (15), or 2%, were fires confined to a fuel burner or boiler malfunction. Three (3), or less than 1%, of these fires were rubbish fires contained to a non-combustible container. One (1) fire, or less than 1%, was confined to a chimney or flue in Cambridge in 2010.

Detectors Alerted Occupants in 92% of Fires

Smoke or heat detectors operated and alerted the occupants in 596, or 92%, of the residential building fires. In 5% of these fires², the detectors did not alert the occupants. Detectors were present but failed to operate in less than 1% of these fires. In less than 1% of these fires, no detectors were present at all. The fire was too small to trigger the detector in 1% of the residential fires. Smoke detector performance was undetermined in 10 incidents, or 2% of Cambridge's residential building fires.

Detector Status in Cambridge Residential Fires 2010

1 Failed Detector

It was undetermined why the detector failed to operate.

¹ In MFIRS v5 a fire in a building contained to a non-combustible container (Incident Type = 113-118) does not have to have a Fire Module completed. Therefore the following data fields do not need to be completed: Area of Origin, Detector Status, Item First Ignited, Heat Source, Factors Contributing to Ignition, Cause of Ignition, and Equipment Involved In Ignition. These incidents are not included in the analysis of these fields.

² These represent confined fires where it was reported that the detector did not alert the occupants.

VACANT BUILDINGS

No Building Fires Occurred in Vacant Buildings

Cambridge did not report any fires that occurred in buildings that were vacant, under construction or demolition³.

JUVENILE-SET FIRES

0 Juvenile-set Fires

In 2010, Cambridge did not report any juvenile-set fires.

ARSONS

7 Total Arsons⁴ — 4 Other or Outside Arsons

Seven (7), or 1%, of Cambridge's 901 fires were considered intentionally set, or, for purposes of this analysis, arson. The two structure fires, two special outside fires, one motor vehicle fire, one brush fire, and one outside rubbish fire caused an estimated dollar loss of \$12,055.

Structure & Motor Vehicle Arsons Rise Slightly

The total number of arsons increased by three from the four arsons that were reported in 2009. Reported structure arsons increased by two from none the year before. Motor vehicle arsons increased by one from none in 2009. Outside and other arsons remained the same with four reported in both 2010 and 2009.

Rescue & EMS Calls Are 48% of All Reported Incidents

In 2010, Cambridge voluntarily reported 13,426 incidents to MFIRS. Of these 13,426 incidents, 12,521, or 93%, were non-fire incidents.

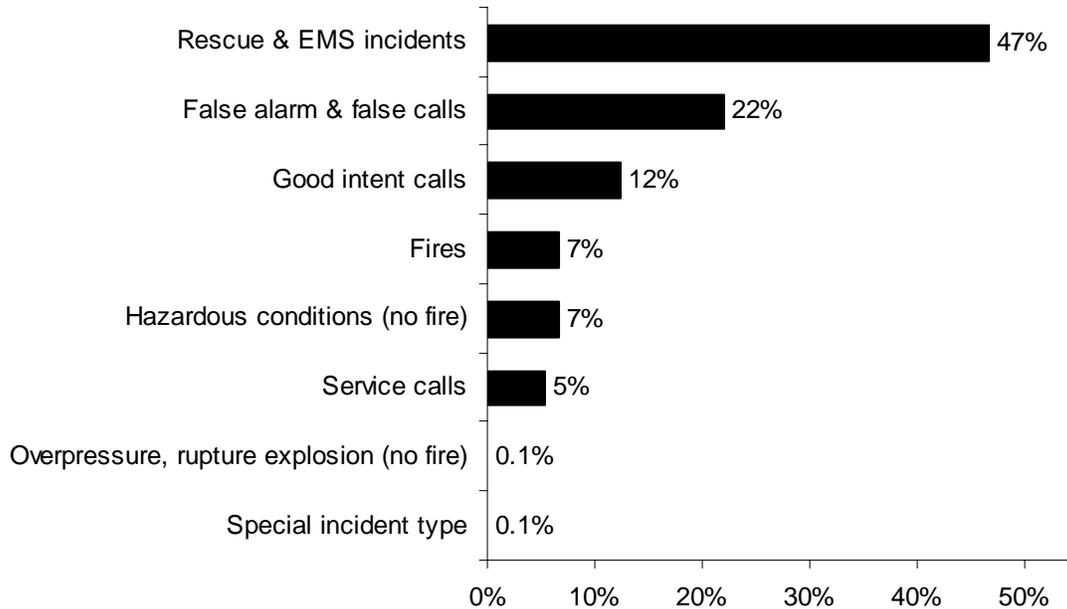

Of these 12,521 non-fire incidents 6,272, or 47% of all the incidents reported in 2010, were reported rescue and emergency medical services (EMS) calls; 2,958, or 22%, were reported false alarm or false calls; 1,654, or 12%, were reported good intent calls; 896, or 7%, were reported hazardous condition calls with no fire; 721, or 5%, were reported service calls such as lock-outs, water or smoke problems, unauthorized burning or public service assistance; 10, or 0.1%, were reported overpressure, rupture, explosion or overheat calls with no fire; eight, or 0.1%, were special incident type calls such as citizen complaints; and two, or 0.01%, were responses to severe weather.

³ In version 4 a vacant building was defined by having a Fixed Property Use code in the subsection of construction, unoccupied properties, between 910 & 919. However in version 5, the Property Use is separate from the Building Status. In v5 a building is considered vacant if the Building Status is coded: 1- Under Construction; 3-Idle, not routinely used; 4-Under major renovation; 5-Vacant, secured; 6-Vacant, unsecured; & 7-Being demolished. The building use is coded separately in the Property Use field.

⁴ In MFIRS v5 a fire is considered an arson if the Cause of Ignition = 1 (Intentional) and the Age of Person (Fire Module) is greater than 17 or if the field is blank; or if the Wildland Module is used, the Wildland Fire Cause = 7 (Incendiary) and the Age of the Person (Wildland Module) is greater than 17 or if the field is left blank.

In 2010, Cambridge reported 905 fires⁵, accounting for 7% of all reported incidents.

2010 Incidents by Incident Type

Cambridge Gave Mutual Aid in 73 Reported Incidents

In 2010, Cambridge reported coming to the aid of other fire departments 73 times. Of these 73 incidents, 48, or 66%, were for cover assignments (service calls); 16, or 22%, were for hazardous conditions calls with no fire; four, or 5%, were for good intent calls; three, or 4%, were for fires; and two, or 3% were for rescue or EMS calls.

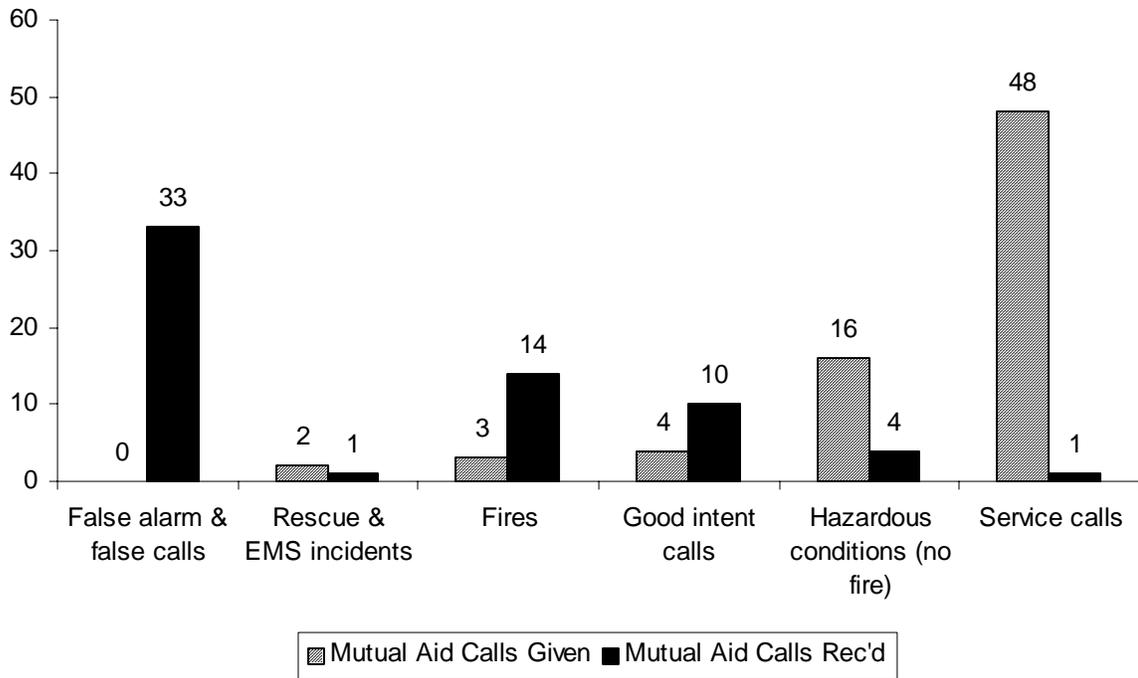

Cambridge Received Mutual Aid in 63 Incidents

In 2010, surrounding fire departments gave aid to Cambridge in 63 incidents. Of these 63 incidents, 33, or 52%, were false alarms or false calls; 14, or 22%, were fires; 10, or 16%, were good intent calls; four, or 6%, were hazardous conditions calls with no fire; one, or 2% was a rescue or EMS call; and one, or 2%, was for a service call.

The following chart compares the number of calls that the Cambridge Fire Department gave mutual aid to a neighboring community compared to the number of calls that a neighboring community assisted Cambridge. In 2010 Cambridge was asked to send an apparatus outside of Cambridge 1.2 times more than they asked neighboring fire departments for help.

⁵ These fire calls include mutual aid call outside of Cambridge's jurisdiction.

Lowell Fires in 2010

662 Total Fires — 392 Structures, 45 Vehicles & 225 Other Fires

The Lowell Fire Department reported 662 fires to the Massachusetts Fire Incident Reporting System (MFIRS) in 2010. The 392 structure fires, 45 motor vehicle fires, 115 outside rubbish fires, 97 brush fires, six special outside fires; and seven unclassified fires caused three civilian deaths, one civilian injury, three firefighter injuries and an estimated dollar loss of \$2.2 million.

3 Lowell Residents Killed in 2 Fatal Fires

- On October 10, 2010, at 4:00 a.m., the Lowell Fire Department was called to a fatal electrical fire in a 12-unit apartment building. The fire started by arcing in a fourth floor bedroom. The victims, a 23-year old man and 47-year man were unable to act because they were both overcome by the heat and smoke of the fire as they slept. There were no other injuries associated with this fire. Smoke detectors were present and alerted the other occupants of the building. The building was not sprinklered. Damages from this fire were estimated to be \$571,100.
- On October 22, 2010, at 12:46 a.m., the Lowell Fire Department was called to a fatal fire in a lean-to of undetermined cause. The body of the victim, a 42-year old homeless man was discovered by firefighters while overhauling the scene. There were no other injuries associated with this fire. There was no estimate of damages from this fire.

Structure & Outside Fires Up in 2010

Total fires increased by 156 from the 506 incidents reported in 2009. Reported structure fires increased by 68 from the 324 reported during the previous year. Motor vehicle fires remained the same with 45 reported in both 2009 and 2010. Outside and other fires increased by 88 from the 137 reported in 2009.

LOWELL FIRES FROM 2006 TO 2010

	Total Fires	Structure Fires	Vehicle Fires	Other Fires	Total Arsons	Structure Arsons	Vehicle Arsons	Other Arsons
2006	688	443	53	192	13	6	1	6
2007	630	372	46	212	12	6	2	4
2008	573	403	43	127	24	5	12	7
2009	506	324	45	137	24	8	6	10
2010	662	392	45	225	20	7	8	5

BUILDING FIRES

There were 387 building fires of different types in Lowell in 2010. These 387 building fires accounted for 98.7% of all structure fires in Lowell.

86% of Building Fires in Homes

The 387 building fires that occurred in Lowell in 2010 can be broken down by fixed property use as follows: 331, or 86% of all building fires, were in residential properties; 19 fires occurred in public assembly properties; 11 fires occurred in special properties; 10 happened in mercantile or business properties; four fires occurred in educational facilities; and another four fires happened in storage facilities; three fires occurred in institutional facilities; three fires happened at industrial facilities; and two fires occurred in manufacturing or processing facilities.

RESIDENTIAL FIRES

Residential Building Fires Were Up

There were 331 reported residential building fires in Lowell in 2010, a decrease of 55 from the 276 reported residential building fires reported in 2009.

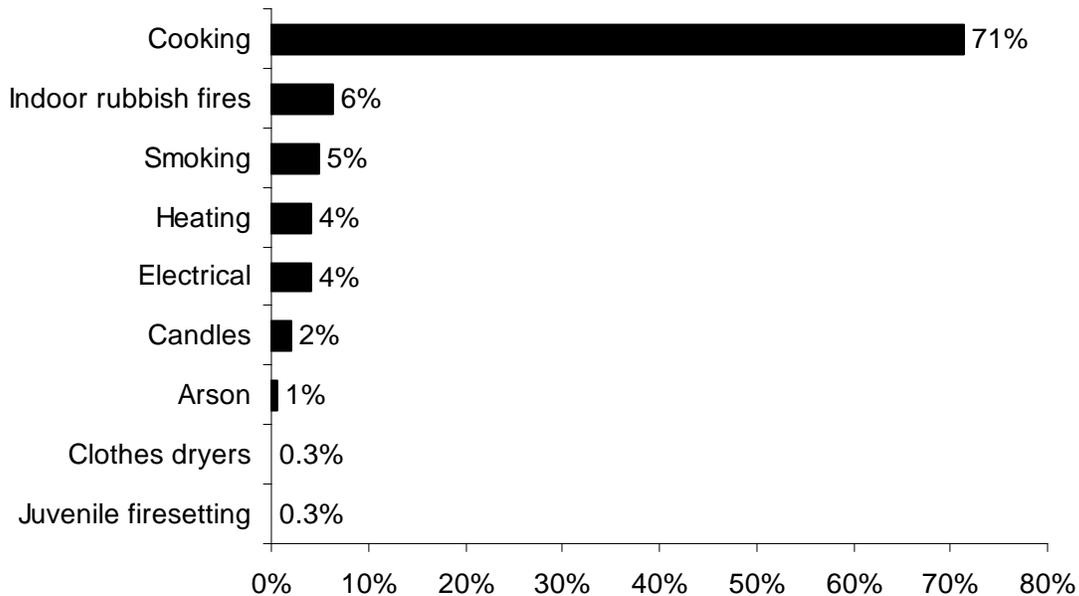

Apartments Accounted for Almost 3/4 of Residential Building Fires

Apartments, accounting for 73% of the building fires in Lowell where the peak fixed property use for residential building fires in 2010. Twenty-two percent (22%) of residential fires occurred in 1- or 2-family homes; 3% happened in rooming houses; 1% occurred in dormitories; and another 1% happened in residential board and care facilities.

Unattended Cooking Leading Cause of Residential Fires

The leading cause of residential building fires in Lowell was unattended cooking and other unsafe cooking practices, nearly three-quarters, or 71%, of these fires. Indoor rubbish fires caused 6% of these fires. Smoking caused 5% while electrical problems and

2010 Leading Causes of Fires in Lowell Homes

heating fires were each the cause of 4% of Lowell’s residential fires. Candles caused 2% and arson caused 1% of these fires. Clothes dryers and juvenile-set fires were each the cause of less than 1% of the fires in Lowell’s residential occupancies in 2010.

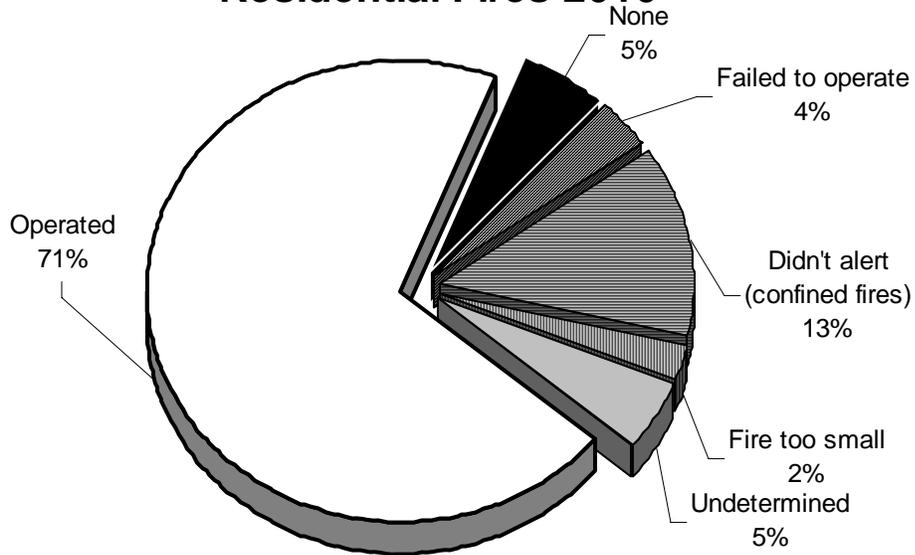

77% of Residential Building Fires Are Confined to Non-Combustible Containers¹

Two hundred and fifty-four (254), or 77% of all residential building fires were confined to non-combustible containers in 2010. Two hundred and twenty-four (224), or 68%, of all residential building fires reported in 2010 were cooking fires contained to a non-combustible container. Nineteen (19), or 6%, of these fires were rubbish fires contained to a non-combustible container. Eight (8), or 2%, were fires confined to a fuel burner or boiler malfunction. Two (2) fires, or 1%, were reported to have been contained to a chimney or flue, and one fire, or less than 1% was confined to a commercial compactor.

Detectors Worked in 71% of Fires

Smoke or heat detectors operated and alerted the occupants in 232, or 71%, of the residential building fires. In 13% of these fires², the detectors did not alert the occupants. Detectors were present but did not operate in 4% of these incidents. In 5% of these fires, no detectors were present at all. The fire was too small to trigger the detector in 2% of these fires. Smoke detector performance was undetermined in 17 incidents, or 5% of Lowell’s residential building fires.

Detector Status in Lowell's Residential Fires 2010

¹ In MFIRS v5 a fire in a building contained to a non-combustible container (Incident Type = 113-118) does not have to have a Fire Module completed. Therefore the following data fields do not need to be completed: Area of Origin, Detector Status, Item First Ignited, Heat Source, Factors Contributing to Ignition, Cause of Ignition, and Equipment Involved In Ignition. These incidents are not included in the analysis of these fields.

1/4 of Failed Detectors Had Missing or Disconnected Batteries

Of the 12 fires where smoke detectors were present but failed to operate, three, or 25%, failed because the batteries were either missing or disconnected. A power failure, shutoff or disconnect caused two, or 17%, of the detectors to fail. A dead battery was also responsible for one, or 8%, of the smoke detectors that failed to operate. It was undetermined in the other six cases why the detectors failed to operate.

VACANT BUILDINGS

5 Building Fires in Vacant Buildings

Lowell reported five fires that occurred in buildings that were vacant, under construction or demolition³. This represented 1% of the total 387 building fires reported to MFIRS in 2010. Two (2) one- or two-family homes, two apartment buildings, and one outbuilding were reported as vacant building fire incidents.

JUVENILE-SET FIRES

4 Juvenile-set Fires

There were four juvenile-set fires in Lowell in 2010. There were one structure fire, two brush fires and one outside rubbish fire.

ARSONS

20 Arsons⁴ - 7 Structure, 8 Motor Vehicle and 5 Outside & Other

Twenty (20), or 3%, of Lowell's 662 fires were considered intentionally set, or, for purposes of this analysis, arson. There were seven structure arsons, eight motor vehicle arsons and five outside and other arsons.

Motor Vehicle Arsons Up Slightly in 2010

The total number of arsons decreased by four from the 24 total arsons reported in 2009. Reported structure arsons decreased by one from the eight reported in 2010. Motor vehicle arsons increased by two from the six reported in 2009. Outside and other arsons decreased by five from 10 reported the year before.

² These represent confined fires where it was reported that the detector did not alert the occupants.

³ In version 4 a vacant building was defined by having a Fixed Property Use code in the subsection of construction, unoccupied properties, between 910 & 919. However in version 5, the Property Use is separate from the Building Status. In v5 a building is considered vacant if the Building Status is coded: 1- Under Construction; 3-Idle, not routinely used; 4-Under major renovation; 5-Vacant, secured; 6-Vacant, unsecured; & 7-Being demolished. The building use is coded separately in the Property Use field.

⁴ In MFIRS v5 a fire is considered an arson if the Cause of Ignition = 1 (Intentional) and the Age of Person (Fire Module) is greater than 17 or if the field is blank; or if the Wildland Module is used, the Wildland Fire Cause = 7 (Incendiary) and the Age of the Person (Wildland Module) is greater than 17 or if the field is left blank.

27 Fires Reported as Undetermined

In 2010, Lowell reported 27 fires with an undetermined cause after investigation. Eight (8), or 30%, of these 27 fires were structure fires. Nine (9), or 33% were motor vehicle fires; and ten, or 37%, were outside or other fires.

ALL INCIDENTS

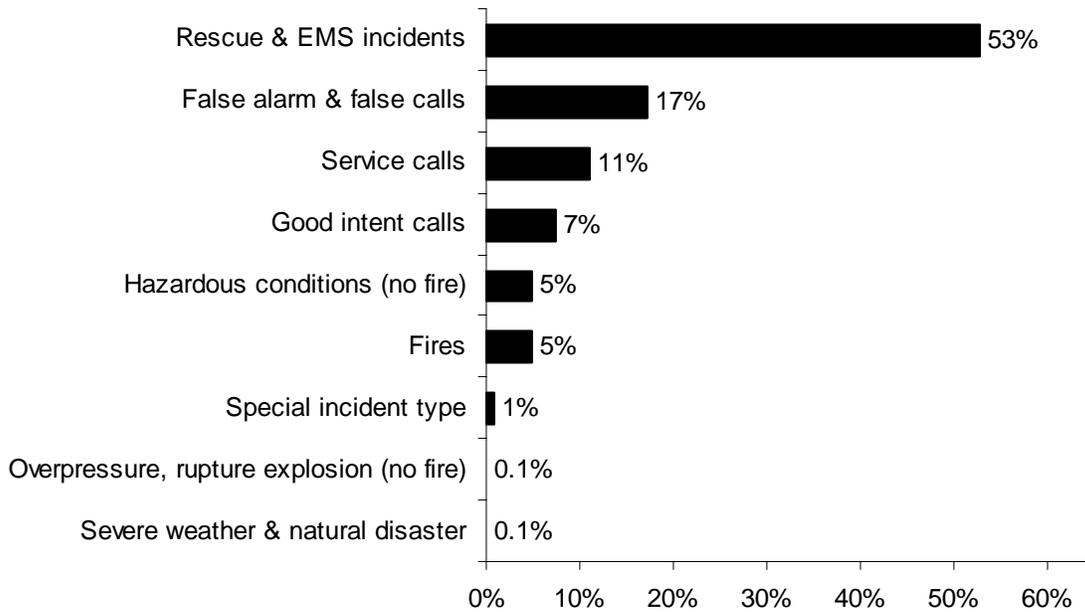

Rescue & EMS Calls Are Over 1/2 of All Reported Incidents

In 2010, Lowell voluntarily reported 13,214 incidents to MFIRS. Of these 13,214 incidents, 12,540, or 95% were non-fire incidents.

Of these 12,540 non-fire incidents 6,975, or 53% of all reported incidents in 2010, were reported rescue and emergency medical services (EMS) calls; 2,290, or 17%, were reported false alarm or false calls; 1,465, or 11%, were reported service calls such as lock-outs, water or smoke problem, unauthorized burning or public service assistance; 979, or 7%, were reported good intent calls; 595, or 5%, were reported hazardous condition calls with no fire; 121, or 1%, were special incident types; 13, or 0.1%, were reported overpressure, rupture, explosion or overheat calls with no fire; and seven or 0.1%, were severe weather calls.

In 2010, Lowell reported 674 fires⁵, accounting for 5% of all reported incidents.

2010 Incidents by Incident Type

⁵ This includes the fires that Lowell responded to as mutual aid calls outside of their jurisdiction.

Lowell Gave Mutual Aid in 26 Reported Incidents

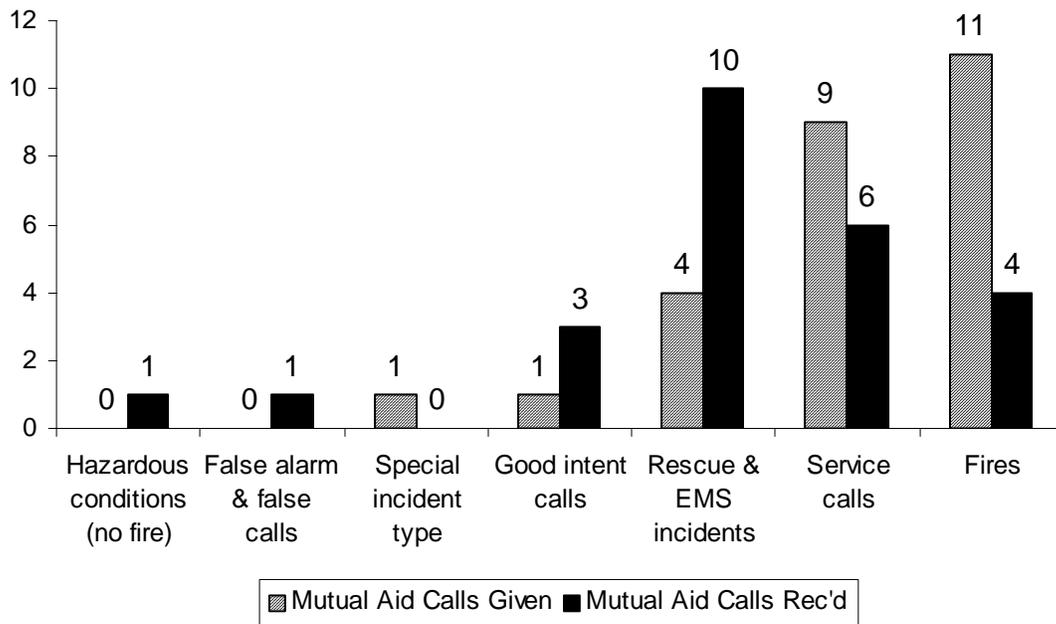

In 2010, Lowell reported coming to the aid of other fire departments 26 times. Of these 26 incidents, 11, or 42%, were for fires; nine, or 35%, were for cover assignments or other service calls; four, or 15%, were for rescue or EMS calls, one, or 4% was a good intent call, and one, or 4%, was a special incident type.

Lowell Received Mutual Aid in 25 Incidents

In 2010, surrounding fire departments gave aid to Lowell during 25 incidents. Of these 25 incidents, 10, or 40%, were rescue or EMS calls, six, or 24%, were service calls; four, or 16%, were for fires; three, or 12%, were good intent calls; one, or 4%, were false alarms or false calls; and another call, or 4% was a hazardous condition call with no fire.

The following chart compares the number of calls that the Lowell Fire Department received mutual aid from a neighboring community compared to the number of calls that Lowell gave assistance to a neighboring community. In 2010 Lowell received aid as much as they gave it.

MFIRS
Massachusetts Fire Incident Reporting System

Nantucket County Fires in 2010

46 Total Fires — 29 Structures, 3 Vehicles & 9 Outside and Other Fires

Nantucket County ranked thirteenth out of the fourteen Massachusetts counties in total reported fires. The Nantucket Fire Department reported 46 fires to the Massachusetts Fire Incident Reporting System (MFIRS) in 2010. The 29 structure fires, three motor vehicle fires, seven brush fires, three outside rubbish fires, one special outside fire and three unclassified fires caused an estimated dollar loss of \$5,000. Nantucket County's fires accounted for 0.1% of the 32,680 Massachusetts fires reported in 2010.

All Fires Up

The total number of reported fire incidents increased by seven from the 39 fires reported in 2009. Structure fires increased by two from the 27 reported in 2009. Motor vehicle fires remained the same with three reported in both 2009 and 2010. Reported outside and other fires increased by five from the nine reported in 2009.

Nantucket is an island community with a small year round population. During the summer months, the population increases immensely. Consequently, 43% of Nantucket's fires occurred between the months of May and September.

No Reported Fire Deaths

In 2010, Nantucket did not report any fire-related deaths.

NANTUCKET FIRES FROM 2006 TO 2010

Year	Total Fires	Structure Fires	Vehicle Fires	Other Fires	Total Arsons	Structure Arsons	Vehicle Arsons	Other Arsons
2006 ¹	113	66	9	38	2	0	2	0
2007	63	24	3	36	0	0	0	0
2008	25	14	5	6	0	0	0	0
2009	39	27	3	9	1	0	0	1
2010	46	29	3	14	1	0	0	1

Fire and Fire Death Rates

Nantucket County had 4.5 fires per 1,000 population. That figure ranks Nantucket County eighth in the state and below the state rate of 5.0 fires per 1,000 population. Nantucket County also had no fire deaths, tying it for twelfth among Massachusetts counties and below the state rate of 0.05 fire deaths per 10,000 population.

¹ In 2006, Nantucket had problems submitting their non-fire incidents for January - June. They were only able to submit fires, and only the very basic information for these incidents.

Outside Rubbish Fire Was Nantucket's Largest Loss Fire

- On July 10, 2010, at 10:70 p.m., the Nantucket Fire Department was called to an outside rubbish fire near a single-family home. Witnesses had mentioned that sparklers were being used earlier in the evening, but due to the total destruction of the contents in the rubbish bin, the cause remained undetermined. No one was injured at this fire and damages were estimated to be \$5,000.

STRUCTURE FIRES**Reported Structure Fires Up**

There were 29 structure fires in Nantucket in 2010. These incidents represented 63% of Nantucket County's reported fires in 2010. No dollar loss was estimated for these 29 fires. The total number of reported structure fires increased by two from the 27 reported in 2009.

No Reported Structure Arsons

Nantucket County did not report any structure arsons in 2010. The last year that Nantucket reported a structure arson was 2003.

BUILDING FIRES

There were 29 building fires of different types in Nantucket County in 2010. These 29 building fires accounted for all of the structure fires in Nantucket County.

79% of Nantucket Building Fires Occurred in People's Homes

Twenty-three (23), or 79%, of Nantucket County's 29 building fires occurred in residential occupancies. Three (3) fires took place in public assembly properties, two fires occurred in storage facilities, and one fire occurred at a business.

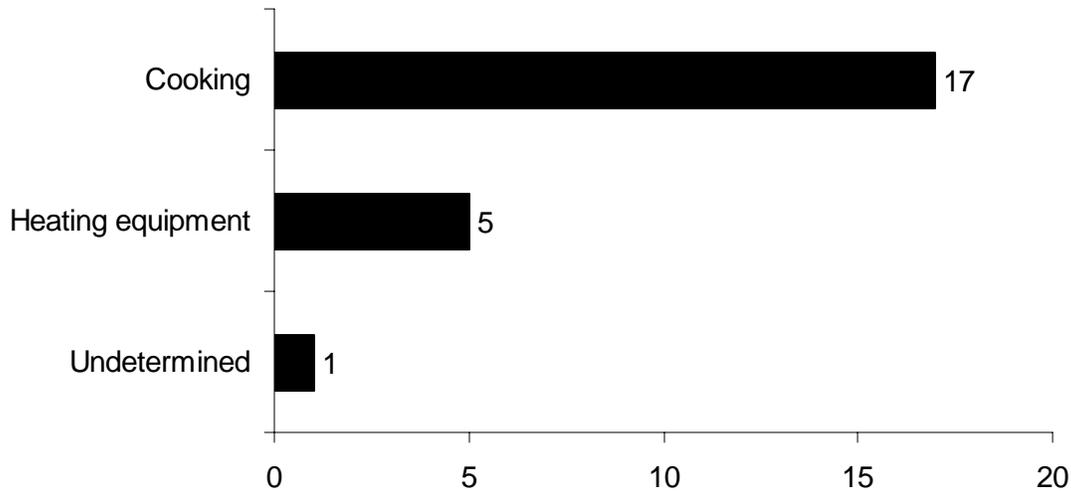

RESIDENTIAL FIRES**Residential Building Fires Down Slightly**

There were 23 reported residential building fires in Nantucket County in 2010. These 23 fires are a decrease of one, or 4%, from the 24 residential building fires reported in 2009. Twenty-one (21), or 91%, occurred in one- or two-family homes; one, or 4%, happened in an apartment; and one, or 4%, occurred in a dormitory.

Cooking Fires Cause 17 of 23 Residential Fires

The leading cause of residential building fires in Nantucket County was unattended cooking and other unsafe cooking practices, accounting for 17, or 74%, of these fires. Heating equipment caused five, or 22%, of these fires. It was undetermined what caused one, or 4%, of Nantucket's 2010 residential fires.

2010 Leading Causes of Fires in Nantucket Homes

22 Residential Building Fires Are Confined to Non-Combustible Containers²

Twenty-two (22), or 96%, of all residential building fires were reported as confined to non-combustible containers in 2010. Seventeen (17) of the reported fires were cooking fires contained to a non-combustible container accounting for 74% of the residential fires. Three (3), or 13%, of Nantucket's residential fires were confined to chimneys or flues; and two, or 9%, were fires confined to a fuel burner or boiler malfunction.

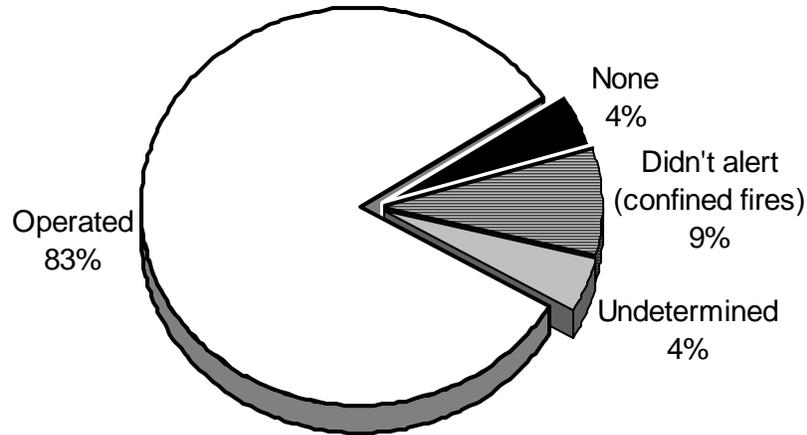

Detectors Alerted Occupants in Over 83% of Fires

Smoke or heat detectors operated and alerted the occupants in 19, or 83%, of the residential building fires. In two, or 9%, of these fires³ the detectors did not alert the occupants. In 4% of these fires, no detectors were present at all. Detector performance was undetermined in one, or 4%, of Nantucket's residential fires.

² In MFIRS v5 a fire in a building contained to a non-combustible container (Incident Type = 113-118) does not have to have a Fire Module completed. Therefore the following data fields do not need to be completed: Area of Origin, Detector Status, Item First Ignited, Heat Source, Factors Contributing to Ignition, Cause of Ignition, and Equipment Involved In Ignition. These incidents are not included in the analysis of these fields.

³ These represent confined fires where it was reported that the detector did not alert the occupants.

Detector Status in Nantucket County's Residential Fires 2010

VACANT BUILDING FIRES

1 of Nantucket County Building Fires Occurred in Vacant Buildings

Nantucket County reported one fire that occurred in a building that were vacant, under construction or demolition⁴. This represented 5% of the total 29 building fires reported to MFIRS in 2010. This vacant building fire occurred in a single-family home.

None of the vacant building fires in Nantucket County in 2010 were determined to be intentionally set.

JUVENILE-SET FIRES

No Juvenile-set Fires

Nantucket County did not report any juvenile-set fires in 2010.

⁴ In version 4 a vacant building was defined by having a Fixed Property Use code in the subsection of construction, unoccupied properties, between 910 & 919. However in version 5, the Property Use is separate from the Building Status. In v5 a building is considered vacant if the Building Status is coded: 1- Under Construction; 3-Idle, not routinely used; 4-Under major renovation; 5-Vacant, secured; 6-Vacant, unsecured; & 7-Being demolished. The building use is coded separately in the Property Use field.

ARSONS

1 Total Arson⁵ — 1 Outside Arson

One (1), or 2%, of Nantucket County's 46 fires was considered intentionally set, or, for purposes of this analysis, arson. The one brush arson accounted for all of the county's total arson fires, and none of the county's total dollar losses.

Outside Arson Fires Remain the Same

For the second year in a row Nantucket reported one arson. The total number of arsons remained the same with one reported in both 2009 and 2010. Reported structure and motor vehicle arsons remained the same with none reported in both 2009 and 2010. Outside and other arsons remained the same with one reported in both 2009 and 2010.

ALL INCIDENTS

Rescue & EMS Calls Are 46% of All Reported Incidents

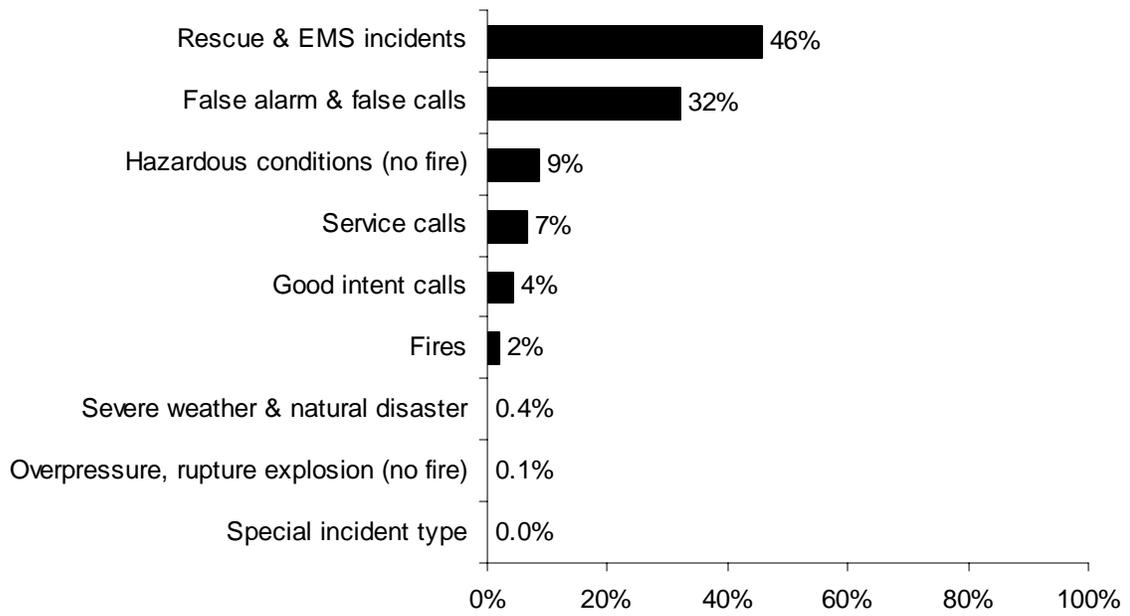

In 2010, Nantucket County reported 2,211 responses to MFIRS. Of these 2,211 incidents, 2,165 non-fire calls were voluntarily reported.

Of these 2,165 non-fire calls 1,013, or 46% of the total responses reported in 2010, were reported rescue and emergency medical services (EMS) calls; 710, or 32%, were reported false alarm or false calls; 191, or 9%, were reported hazardous condition calls with no fire; 147, or 7%, were reported service calls such as lock-outs, water or smoke problem, unauthorized burning or public service assistance; 92, or 4%, were reported good intent calls; nine, or 0.4%, were severe weather calls; two, or 0.1%, were reported overpressure, rupture, explosion or overheat calls with no fire; and one, or 0.05%, was a special incident type call.

Forty-six (46), or 2%, of the total responses submitted by the Nantucket Fire Department were fires.

⁵ In MFIRS v5 a fire is considered an arson if the Cause of Ignition = 1 (Intentional) and the Age of Person (Fire Module) is greater than 17 or if the field is blank; or if the Wildland Module is used, the Wildland Fire Cause = 7 (Incendiary) and the Age of the Person (Wildland Module) is greater than 17 or if the field is left blank.

All non-fire responses or fire incidents without a dollar loss or human casualty are voluntarily reported to MFIRS. The Office of the State Fire Marshal strongly encourages any departments that want to send all of their responses to do so.

Norfolk County

2010 Fire Data Analysis

Stephen D. Coan, State Fire Marshal
Fire Data and Public Education Unit
Division of Fire Safety
Department of Fire Services

P.O. Box 1025 State Road • Stow, Massachusetts 01775 • (978) 567-3300

Norfolk County Fires in 2010

3,420 Total Fires — 2,020 Structures, 284 Vehicles & 1,116 Other Fires

Norfolk County ranked fifth out of the fourteen Massachusetts counties in total reported fires. Norfolk County fire departments reported 3,420 fires to the Massachusetts Fire Incident Reporting System (MFIRS) in 2010. The 2,020 structure fires, 284 motor vehicle fires, 705 brush, tree or lawn fires, 209 outside rubbish fires, 110 special outside fires, eight cultivated vegetation or crop fires, and 84 other fires caused five civilian deaths, 27 civilian injuries, 43 fire service injuries and an estimated dollar loss of \$13.9 million. Norfolk County's fires accounted for 10% of the 32,680 Massachusetts fires reported in 2010.

Twenty-seven (27) of the 28 fire departments in Norfolk County either reported incidents to the Massachusetts Fire Incident Reporting System (MFIRS) or certified that they had no reportable fires in 2010.

All Fires Up

The total number of reported fire incidents increased by 634 from the 2,786 reported in 2009. Reported structure fires increased 170 from the 1,850 reported during the previous year. Motor vehicle fires increased by nine from the 275 reported the year before. Reported outside and other fires increased by 455 from the 661 reported a year earlier.

Brush Fires Up by 120%

Brush fires increased by 385, or 120%, from the 320 reported in 2010. This is a major increase and the main reason for the rise in all Norfolk County fires.

NORFOLK COUNTY FIRES FROM 2006 TO 2010

Year	Total Fires	Structure Fires	Vehicle Fires	Other Fires	Total Arsons	Structure Arsons	Vehicle Arsons	Other Arsons
2006	3,010	1,644	280	1,086	88	24	7	57
2007	3,750	1,686	308	1,756	94	21	4	69
2008	3,068	1,830	290	948	86	17	6	63
2009	2,786	1,850	275	661	59	9	5	45
2010	3,420	2,020	284	1,116	80	14	4	62

Fire and Fire Death Rates

Norfolk County had 5.1 fires per 1,000 population. That figure ranks Norfolk County fourth in the state and slightly higher than the state rate of 5.0 fires per 1,000 population. Norfolk County also had 0.07 fire deaths per 10,000 population ranking it tied for third among Massachusetts counties and above the state rate of 0.05 fire deaths per 10,000 population.

5 Norfolk Fires Kill 5 People

- On February 8, 2010 at 1:02 a.m., the Stoughton Fire Department was called to a fatal motor vehicle accident with ensuing fire. A pick-up truck crashed into a utility pole and the driver was trapped inside. The victim, a 21-year old man, was the only occupant of the truck. Damages from this fire were not estimated.
- On June 6, 2010, at 10:58 p.m., the Medway Fire Department was called to a fatal arson fire in a single-family home. The victim, a 41-year old man, successfully committed self-immolation by igniting combustibles in his bedroom. No one else was injured at this fire. The victim was transported to a local hospital where he later succumbed to his injuries. It was undetermined if smoke detectors were present and no sprinklers were present. Damages from this fire were not estimated.
- On June 12, 2010, at 11:43 a.m., the Wellesley Fire Department was called to a fatal smoking fire in a single-family home. The victim, an 81-year old woman was smoking when she accidentally ignited herself. She went to the bathroom to try and extinguish the flames. Her husband found her and extinguished the fire with a garden hose. No one else was injured at this fire. Smoke detectors were present but it was undetermined if they operated. No sprinklers were present. Damages from this fire were estimated to be \$1,000.
- On July 13, 2010, at 10:07 a.m., the Medway Fire Department was called to a fatal clothes dryer fire in a single-family home. The victim, an 80-year old woman was found by the first arriving firefighters on the front lawn with burns over approximately 35% of her body surface area. She was transported to a local hospital where she succumbed to her injuries six days later. No one else was injured at this fire. Smoke detectors were present but it was undetermined if they operated. No sprinklers were present. Damages from this fire were not estimated.
- On July 30, 2010, at 12:32 p.m., the Norfolk Fire Department was called to a fatal propane explosion with ensuing fire in a two-family home. The victim, a 48-year old male construction worker, was working in the unoccupied unit when the explosion occurred. He was buried under debris as firefighters extinguished the fire and dug him out. He was transported to a Boston hospital where he later succumbed to his injuries. Five (5) other workers and two firefighters were also injured at this fire. Smoke detectors were present but it was undetermined if they operated. No sprinklers were present. Damages from this fire were estimated to be \$820,000.

Norfolk Has Norfolk County's Largest Loss Fire in 2010

- The Norfolk fatal fire described above was also the county's largest loss fire.

STRUCTURE FIRES

Reported Structure Fires Up

The 2,020 structure fires caused four of Norfolk County's civilian deaths, 25 civilian injuries, 38 fire service injuries and an estimated dollar loss of \$12.8 million. These incidents represented 59% of Norfolk County's reported fires in 2010. The average estimated dollar loss per structure fire was \$6,361. The total number of reported structure fires increased by 170, or 9%, from the 1,850 reported in 2009.

Arson Caused 1% of Structure Fires

The 14 structure arsons caused one civilian death, two fire service injuries and an estimated dollar loss of \$416,300. Arson was indicated as the cause of 1% of the structure fires and 3% of Norfolk County's structure fire dollar loss. The 14 structure arsons accounted for 18% of the Norfolk County arson fires reported in 2010. The total number of reported structure arsons increased by five, or 56%, from nine in 2009.

Over 1/2 of Structure Arsons Occur in Residential Properties

Over half, or 57%, of Norfolk County's 14 structure arsons occurred in residential occupancies; 14% each occurred in public assembly properties and special properties; and 7% each occurred in educational and institutional facilities.

BUILDING FIRES

There were 2,001 building fires of different types in Norfolk County in 2010. These 2,001 building fires accounted for 98.9% of all structure fires in Norfolk County.

85% of Norfolk Building Fires Occurred in People's Homes

One thousand six hundred and ninety-nine (1,699), or 85%, of Norfolk County's 2,001 building fires occurred in residential occupancies. Mercantile and business properties had 77 fires. Seventy-six (76) fires took place in public assembly properties, including restaurants and churches. Hospitals, prisons, and other institutional buildings also experienced 61 fires. Thirty-four (34) building fires took place on educational properties. Twenty-one (21) fires took place in storage properties. Twenty (20) building fires in Norfolk County occurred in special properties such as outbuildings, bus stop shelters and telephone booths. Seven (7) fires took place in manufacturing and processing facilities, and three fires occurred in industrial facilities in Norfolk County in 2010.

RESIDENTIAL FIRES

Apartments Accounted for Over 1/2 of Residential Building Fires

The peak fixed property uses for residential building fires were apartments accounting for 49% of the residential building fires in Norfolk County; 44% occurred in 1- or 2-family homes; 3% happened in rooming houses; 1% occurred in residential board and care facilities; 1% happened in hotels or motels; and 1% occurred in dormitories. Eighteen

(18), or 1%, of the residential building fires in Norfolk County occurred in unclassified residential buildings.

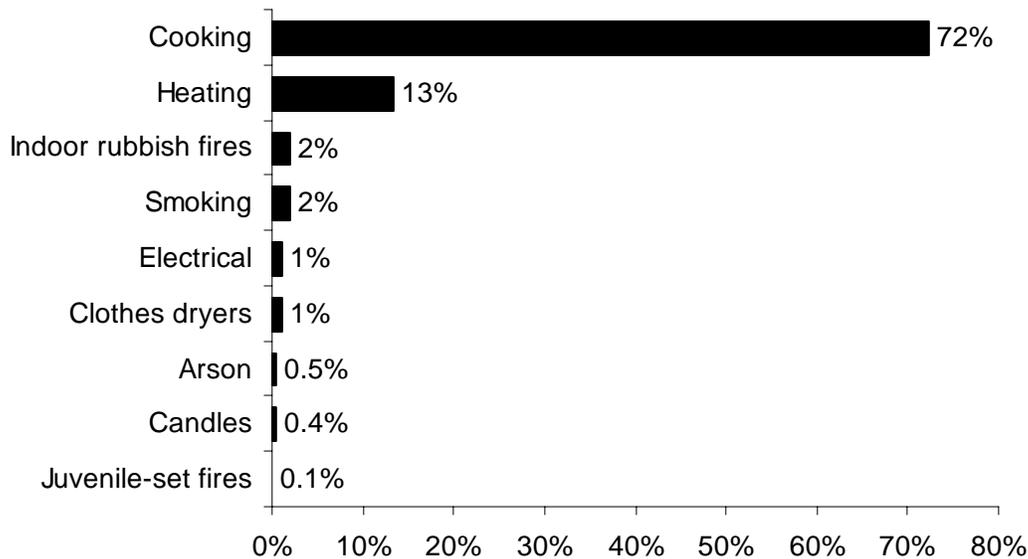

Residential Building Fires Are Up

There were 1,699 reported residential building fires in Norfolk County in 2010. These 1,699 fires are an increase of 110, or 7%, from the 1,589 residential building fires reported in 2009.

Cooking Caused Almost 3/4 of Residential Fires

The leading cause of residential building fires in Norfolk County was unattended cooking and other unsafe cooking practices, accounting for 72% of the fires. Heating caused 13% of fires in people's homes. Indoor rubbish fires and smoking each caused 2% of these fires. Electrical problems and clothes dryers each caused 1% of these fires. Arson (0.5%), candles (0.4%) and juvenile-set fires (0.1%) each caused less than 1% of the residential building fires in Norfolk County in 2010.

2010 Leading Causes of Fires in Norfolk County Homes

86% of Residential Building Fires Are Confined to Non-Combustible Containers¹

One thousand four hundred and sixty-five (1,465), or 85%, of all residential building fires were reported as confined to non-combustible containers in 2010. One thousand two

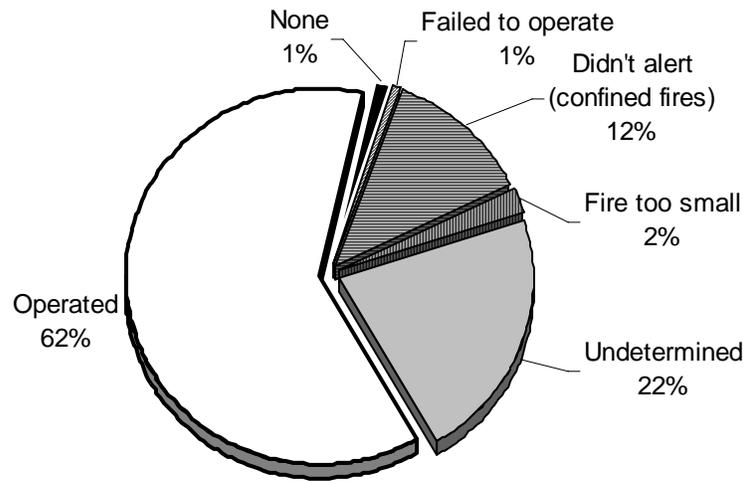

¹ In MFIRS v5 a fire in a building contained to a non-combustible container (Incident Type = 113-118) does not have to have a Fire Module completed. Therefore the following data fields do not need to be completed: Area of Origin, Detector Status, Item First Ignited, Heat Source, Factors Contributing to Ignition, Cause of Ignition, and Equipment Involved In Ignition. These incidents are not included in the analysis of these fields.

hundred and seven (1,207) of the reported fires were cooking fires contained to a non-combustible container accounting for 71% of residential building fires. One hundred and fifty-seven (157), or 9%, were fires confined to a fuel burner or boiler malfunction. Sixty-two (62), or 4%, of all residential building fires reported in 2010 were fires confined to a chimney. Thirty-seven (37), or 2%, were contained rubbish fires. A confined incinerator overload and a confined commercial compactor fire each accounted for less than 1% of Norfolk County’s residential fires in 2010.

Detectors Alerted Occupants in 62% of Fires

Smoke or heat detectors operated and alerted the occupants in 1,053, or 62%, of the residential building fires. In 12% of these fires², the detectors did not alert the occupants. Detectors were present but did not operate in 1% of these incidents. In 1% of these fires, no detectors were present at all. The fire was too small to trigger the detector in 2% of the residential fires. Smoke detector performance was undetermined in 369 incidents, or 22%, of Norfolk County’s residential building fires.

Detector Status in Norfolk County's Residential Structure Fires 2010

Almost 1/4 of Failed Detectors Had Missing or Disconnected Batteries

Of the 13 fires where smoke detectors were present but failed to operate, three, or 23%, failed because the batteries were either missing or disconnected. One detector, or 8%, each failed because the power was shut-off or disconnected, because of improper installation or placement, because of dead batteries, and because of a lack of maintenance. It was undetermined or unclassified in five cases, or 38%, why the detectors failed to operate.

² These represent confined fires where it was reported that the detector did not alert the occupants.

VACANT BUILDINGS

1% of Building Fires Occurred in Vacant Buildings

Norfolk County reported 24 fires that occurred in buildings that were vacant, under construction or demolition³. This represented 1% of the total 2,001 building fires reported to MFIRS in 2010. Seventeen (17) fires occurred in vacant residential properties. Storage facilities and mercantile or business properties each reported three vacant building fires. One (1) vacant building fire occurred in a public assembly property.

Three (3), or 13%, of the vacant building fires in Norfolk County in 2010 were determined to be intentionally set. Two (2) vacant building arsons occurred in single-family homes and one happened in an apartment building.

JUVENILE-SET FIRES

19 Juvenile-set Fires

There were 19 reported juvenile-set fires in Norfolk County in 2010. The six structure fires, one motor vehicle fire, 11 brush fires, one outside rubbish fire, and one special outside fire caused one fire service injury and \$8,000 in estimated damages.

ARSONS

80 Total Arsons - 14 Structures, 4 Vehicles & 62 Other Arsons

Eighty (80), or 2%, of Norfolk County's 3,420 fires were intentionally set, or, for purposes of this analysis, arson⁴. The 14 structure arsons, four motor vehicle arsons and 62 outside and other arsons caused one death, two fire service injuries and an estimated loss of \$424,300.

Structure & Outside Arsons Up

The total number of reported arson fires increased by 21 from the 59 reported in 2009. Reported structure arsons increased by five from the nine reported the previous year. Motor vehicle arsons decreased by one from the five reported in 2009. Reported outside and other arsons increased by 17 from 45 the year before.

³ In version 4 a vacant building was defined by having a Fixed Property Use code in the subsection of construction, unoccupied properties, between 910 & 919. However in version 5, the Property Use is separate from the Building Status. In v5 a building is considered vacant if the Building Status is coded: 1- Under Construction; 3-Idle, not routinely used; 4-Under major renovation; 5-Vacant, secured; 6-Vacant, unsecured; & 7-Being demolished. The building use is coded separately in the Property Use field.

⁴ In MFIRS v5 a fire is considered an arson if the Cause of Ignition = 1 (Intentional) and the Age of Person (Fire Module) is greater than 17 or if the field is blank; or if the Wildland Module is used, the Wildland Fire Cause = 7 (Incendiary) and the Age of the Person (Wildland Module) is greater than 17 or if the field is left blank.

ALL INCIDENTS

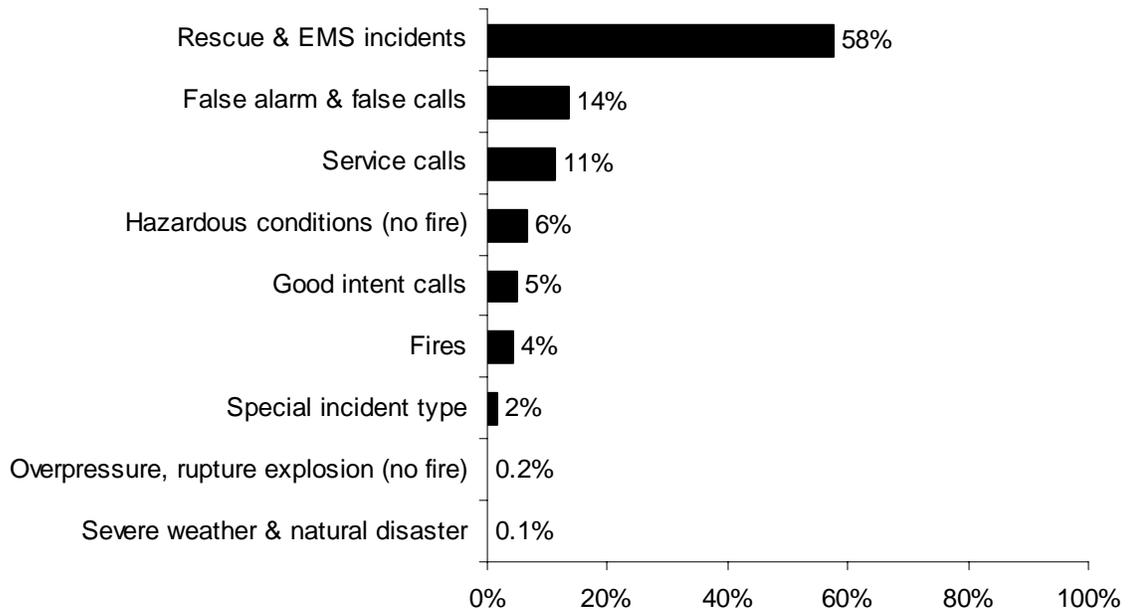

Rescue & EMS Calls Are 58% of All Reported Incidents

In 2010, fire departments in Norfolk County reported 86,581 responses⁵ to MFIRS. Of these 86,581 incidents, 82,966 non-fire calls were voluntarily reported.

Of these 82,966 non-fire incidents, 49,796, or 58%, of all the incidents reported in 2010, were reported rescue and emergency medical services (EMS) calls; 11,770, or 14%, were reported false alarm or false calls; 9,614, or 11%, were reported service calls such as lock-outs, water or smoke problems, unauthorized burning or public service assistance; 5,618, or 6%, were reported hazardous condition calls with no fire; 4,338, or 5%, were reported good intent calls; 1,545, 2%, were special incident type calls such as citizen complaints; 150, or 0.2%, were reported overpressure, rupture, explosion or overheat calls with no fire; and 115, or 0.1%, were severe weather responses.

Three thousand six hundred and fifteen (3,615), or 4%, of the total responses submitted by Norfolk County fire departments were fires.

2010 Responses by Incident Type

⁵ These figures include responses in which Norfolk County fire departments gave mutual aid to other fire departments.

Norfolk County Fire Departments Gave Mutual Aid 2,858 Times

In 2010, Norfolk County fire departments reported coming to the aid of other fire departments 2,858 times. Of these 2,858 responses, 1,651, or 58%, were for rescue or EMS calls; 451, or 16%, were for service calls such as cover assignments; 333, or 12%, were for good intent calls; 178, or 6%, were for fires; 175, or 6%, were for false alarms or false calls; 44, or 2%, were for hazardous conditions calls with no fire; 12, or 0.4%, were special incident types; two, or 0.1%, were reported overpressure, rupture, explosion or overheat calls with no fire; and another two, or 0.1%, were severe weather calls.

Norfolk County Received Mutual Aid in 1,765 Incidents

In 2010, Norfolk County fire departments reported receiving aid from surrounding departments in 1,765 incidents. Of these 1,765 incidents, 1,289, or 73%, were rescue and emergency medical services calls; 198, or 11%, were false alarms or false calls; 164, or 9%, were for fires; 41, or 2%, were good intent calls; 39, or 2%, were hazardous conditions calls with no fire; 26, or 1%, were service calls; six, or 0.3%, were reported overpressure, rupture, explosion or overheat calls with no fire, and two incidents, or 0.1%, were special incident type calls.

⁶ This field does not need to be completed for confined fires. Certain codes are inferred from the Incident Type.

⁷ These figures were calculated only from those incidents, which were coded as Unconfined fires (Incident Types 111-112 or 120-129). The USFA & NFPA do not recommend inferring codes for Heat Source from the fires contained to non-combustible containers (Incident Types 113 – 118). This field does not need to be completed for confined fires, but is sometimes voluntarily reported.

Item First Ignited⁸	%	Factor Contrib. to Ignit.	%	%Unconfined⁹

Detector Alerted Occupants (Confined Fires in Non-Combustible Containers)

Alerted occupants	65%
Didn't alert occupants	14%
Undetermined	21%

⁸ This field does not need to be completed for confined fires. Certain codes are inferred from the Incident Type.

⁹ Some fields in version 5 allow for multiple entries. Therefore the number of entries may be greater than the actual number of incidents being analyzed. These figures were calculated only from those incidents, which were coded as Unconfined fires (Incident Types 111-112 or 120-129). The USFA & NFPA do not recommend inferring codes for Factors Contributing to Ignition from the fires contained to non-combustible containers (Incident Types 113 – 118). This field does not need to be completed for confined fires.

¹⁰ This field does not need to be completed for confined fires. Certain codes are inferred from the Incident Type.

¹¹ These figures were calculated only from those incidents, which were coded as Unconfined fires (Incident Types 111-112 or 120-129). The USFA & NFPA do not recommend inferring codes for Cause of Ignition from the fires contained to non-combustible containers (Incident Types 113 – 118). This field does not need to be completed for confined fires.

Quincy Fires in 2010

574 Total Fires — 268 Structures, 38 Vehicles & 268 Other Fires

The Quincy Fire Department reported 574 fires to the Massachusetts Fire Incident Reporting System (MFIRS) in 2010. The 268 structure fires, 38 motor vehicle fires, 185 brush fires, 53 outside rubbish fires, 16 special outside fires; and two unclassified fires caused four civilian injuries, nine firefighter injuries and an estimated dollar loss of \$427,000.

Structure Fires Down in 2010

Total fires decreased by 43, or 8%, from the 531 incidents reported in 2009. Reported structure fires decreased by 40 from the 308 reported during the previous year. Motor vehicle fires decreased by six from 44 the year before. Outside and other fires increased by 89 from the 179 reported in 2009.

QUINCY FIRES FROM 2006 TO 2010

2010	574	268	38	268	4	0	0	4

BUILDING FIRES

There were 264 building fires of different types in Quincy in 2010. These 264 building fires accounted 98.5% of the structure fires in Quincy.

87% of Building Fires in Homes

The 264 building fires that occurred in Quincy in 2010 can be broken down by fixed property use as follows: 229, or 87% of all building fires, were in residential properties; 10 fires occurred in public assembly properties; nine fires occurred in institutional facilities; six happened in mercantile or business properties; another six occurred at storage facilities; two fires occurred in educational facilities; and another two fires occurred in special properties.

RESIDENTIAL FIRES

Residential Building Fires Down

There were 229 reported residential building fires in Quincy in 2010. These 229 fires are a decrease of 48 from the 277 reported residential building fires reported in 2009.

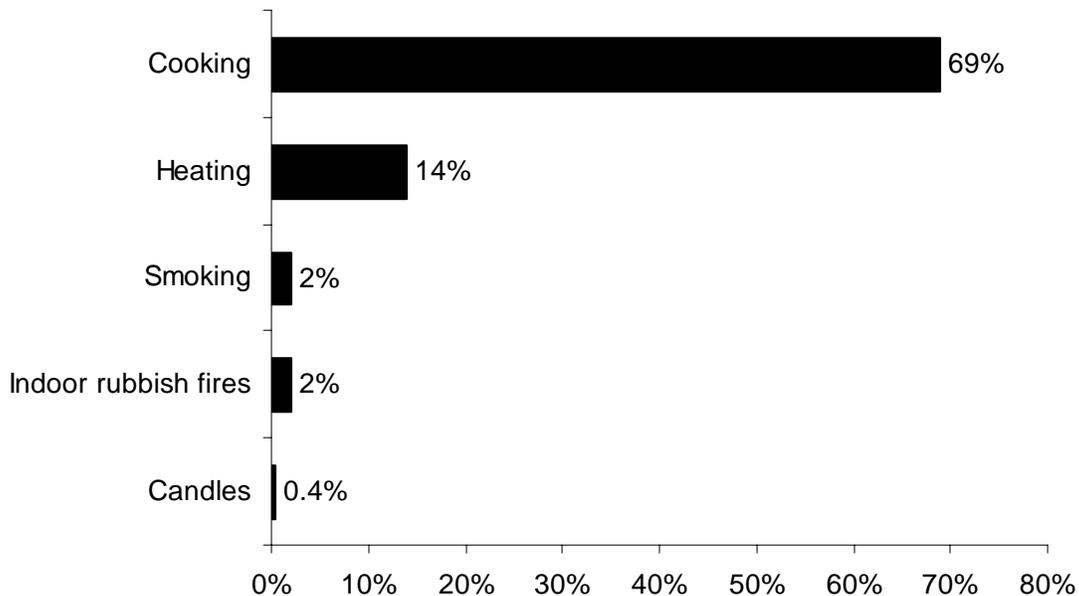

Apartments Accounted for Over 1/2 of Residential Building Fires

The peak fixed property uses for residential building fires in Quincy were apartments, accounting for 55% of the building fires; 33% occurred in 1- or 2-family homes; 8% happened in rooming houses; 1% occurred in residential board and care facilities; and less than 1% each happened in dormitories and hotels. Two percent (2%) of residential fires occurred in unclassified residential occupancies.

Unattended Cooking Caused Over 2/3 of Residential Fires

The leading cause of residential building fires in Quincy was unattended cooking and other unsafe cooking practices, accounting for 69% of these fires. Heating fires caused 14% of these fires. Smoking and indoor rubbish fires each caused 2% of the fires. Candles were the cause of less than 1% of the fires in Quincy’s residential occupancies in 2010.

2010 Leading Causes of Fires in Quincy Homes

84% of Residential Building Fires Are Confined to Non-Combustible Containers¹

One hundred and ninety-three (193), or 84% of all residential building fires were confined to non-combustible containers in 2010. One hundred and fifty-seven (157), or 69%, of all residential building fires reported in 2010 were cooking fires contained to a

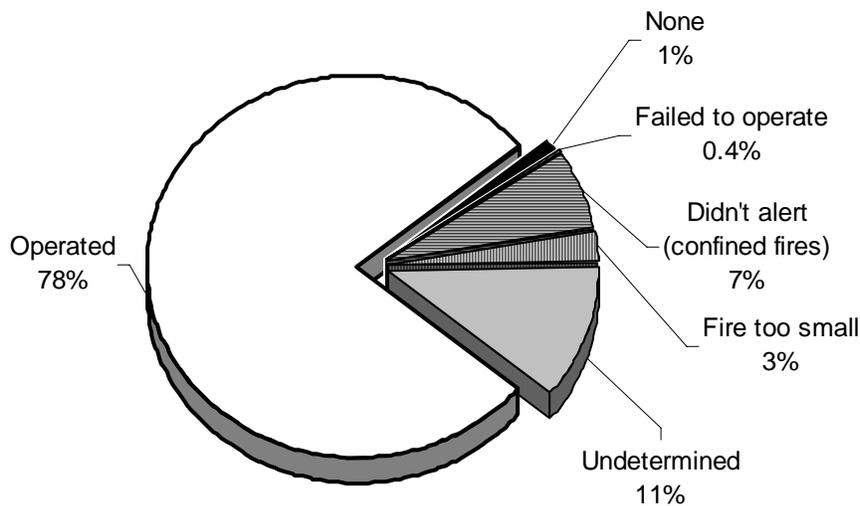

¹ In MFIRS v5 a fire in a building contained to a non-combustible container (Incident Type = 113-118) does not have to have a Fire Module completed. Therefore the following data fields do not need to be completed: Area of Origin, Detector Status, Item First Ignited, Heat Source, Factors Contributing to Ignition, Cause of Ignition, and Equipment Involved In Ignition. These incidents are not included in the analysis of these fields.

non-combustible container. Twenty-six (26), or 11%, were fires confined to a fuel burner or boiler malfunction. Six (6) fires, or 3%, were reported to have been contained to a chimney or flue. Three (3) fires, or 1%, were rubbish fires contained to a non-combustible container; and one fire, or less than 1%, was confined to a commercial compactor.

Detector Operated in 81% of Fires

Smoke or heat detectors operated and alerted the occupants in 179, or 78%, of the residential building fires. In 7% of these fires², the detectors did not alert the occupants. There were no detectors in 1% of these fires. Detectors were present but did not operate in less than 1% of these incidents. The fire was too small to trigger the detector in 3% of these fires. Smoke detector performance was undetermined in 26 incidents, or 11% of Quincy’s residential building fires.

Detector Status in Quincy's Residential Fires 2010

Unknown Why Detector Failed

It was undetermined in the one fire where the detectors were reported to have failed.

VACANT BUILDINGS

2% of Building Fires Occurred in Vacant Buildings

Quincy reported five fires that occurred in buildings that were vacant, under construction or demolition³. This represented 2% of the total 264 building fires reported to MFIRS in

² These represent confined fires where it was reported that the detector did not alert the occupants.

³ In version 4 a vacant building was defined by having a Fixed Property Use code in the subsection of construction, unoccupied properties, between 910 & 919. However in version 5, the Property Use is

2010. Three (3) fires in one- or two-family homes, one fire in a detached residential garage and one fire in an unclassified residence were reported as vacant building fire incidents.

JUVENILE-SET FIRES

2 Juvenile-set Fires

Quincy reported two juvenile-set fires in 2010. Both of these fires were brush fires.

ARSONS

4 Arsons⁴ - 0 Structure, 0 Motor Vehicle and 4 Outside & Other

Four (4), or 1%, of Quincy's 574 fires were considered intentionally set, or, for purposes of this analysis, arson. There were two brush arsons and two special outside arsons.

Total Arsons Drop Slightly

The total number of arsons decreased by three from the seven reported in 2009. Reported structure arsons remained the same with none reported in both 2010 and 2009. Reported motor vehicle arsons decreased by one from the one arson reported in 2009. Outside and other arsons decreased by two from six reported the year before.

125 Fires Reported as Undetermined or Still Under Investigation

In 2010, Quincy reported 125 fires under investigation or cause undetermined after investigation. All 125 were still under investigation.

Sixteen (16), or 13%, of these 125 fires were structure fires. Fourteen (14), or 11% were motor vehicle fires; and 95, or 76%, were outside or other fires. Because so many fires are under investigation the true arson number might be actually higher in Quincy in 2010.

Rescue & EMS Calls Are 56% of All Reported Incidents

In 2010, Quincy voluntarily reported 9,005 incidents to MFIRS. Of these 9,005 incidents, 8,430, or 94%, were non-fire incidents.

Of these 8,430 non-fire incidents 5,067, or 56% of all reported incidents in 2010, were reported rescue and emergency medical services (EMS) calls; 1,619, or 18%, were reported false alarm or false calls; 703, or 8%, were reported service calls such as lock-outs, water or smoke problem, unauthorized burning or public service assistance; 529, or 6%, were reported hazardous condition calls with no fire; 460, or 5%, were reported good intent calls; 22, or 0.2%, were reported overpressure, rupture, explosion or overheat calls

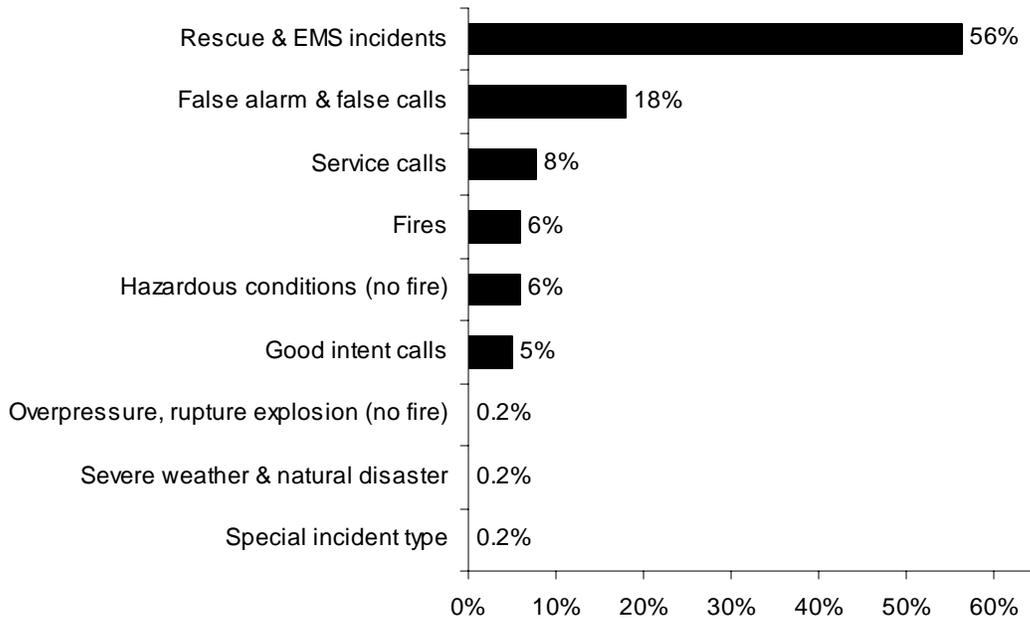

separate from the Building Status. In v5 a building is considered vacant if the Building Status is coded: 1- Under Construction; 3-Idle, not routinely used; 4-Under major renovation; 5-Vacant, secured; 6-Vacant, unsecured; & 7-Being demolished. The building use is coded separately in the Property Use field.

⁴ In MFIRS v5 a fire is considered an arson if the Cause of Ignition = 1 (Intentional) and the Age of Person (Fire Module) is greater than 17 or if the field is blank; or if the Wildland Module is used, the Wildland Fire Cause = 7 (Incendiary) and the Age of the Person (Wildland Module) is greater than 17 or if the field is left blank.

with no fire; and 16, or 0.2%, were responses to incidents caused by severe weather; and 14, or 0.2%, were special type incidents;

In 2010, Quincy reported 575 fires, accounting for 6% of all reported incidents.

2010 Incidents by Incident Type

Quincy Gave Mutual Aid in 9 Incidents

In 2010, Quincy reported coming to the aid of other fire departments nine times. Seven (7) were for cover assignments; one was for a fire; and one was rescue or EMS call.

Quincy Didn't Report Receiving Any Mutual Aid

In 2010, Quincy did not report any incident where surrounding fire departments provided them with aid.

MFIRS
Massachusetts Fire Incident Reporting System

Plymouth County Fires in 2010

1,903 Total Fires — 798 Structures, 219 Vehicles & 886 Other Fires

Plymouth County ranked eighth out of the fourteen Massachusetts counties in total reported fires. Plymouth County fire departments reported 1,903 fires to the Massachusetts Fire Incident Reporting System (MFIRS) in 2010. The 798 structure fires, 219 motor vehicle fires, 456 brush, tree or lawn fires, 197 outside rubbish fires, 134 special outside fires, seven cultivated vegetation or crop fires and 92 other fires caused one civilian death, 40 civilian injuries, 29 fire service injuries and an estimated dollar loss of \$13.1 million. Plymouth County's fires accounted for 6% of the 32,680 Massachusetts fires reported in 2010.

Twenty-seven (27), or 96.4%, of the 28 fire departments in Plymouth County either reported incidents to the Massachusetts Fire Incident Reporting System (MFIRS) or certified that they had no reportable fires in 2010.

Structure & Outside Fires Up

The total number of reported fire incidents increased by 417 from the 1,486 reported in 2009. Reported structure fires increased by 71 from 727 the year before. Motor vehicle fires decreased by 38 from 257 the previous year. Reported outside and other fires increased by 384 from 502 in 2009.

Brush Fires Rise Dramatically

Plymouth County had a large increase in brush fires in 2010. Brush fires increased by 232, or 104%, from the 224 reported in 2009. This is the main reason for the 28% rise in overall fires in Plymouth County.

PLYMOUTH COUNTY FIRES FROM 2006 TO 2010

Year	Total Fires	Structure Fires	Vehicle Fires	Other Fires	Total Arsons	Structure Arsons	Vehicle Arsons	Other Arsons
2006	1,929	733	238	958	114	22	5	87
2007	2,010	884	268	858	91	28	12	51
2008	1,776	776	232	768	99	34	9	56
2009	1,486	727	257	502	75	25	23	30
2010	1,903	798	219	886	93	18	12	63

Fire and Fire Death Rates

Plymouth County had 3.8 fires per 1,000 population. That figure ranks Plymouth County tenth in the state and below the state rate of 5.0 fires per 1,000 population. Plymouth County also had 0.02 fire deaths per 10,000 population ranking it tied for eighth among Massachusetts counties and below the state rate of 0.05 fire deaths per 10,000 population.

1 Plymouth County Fatal Fire Killed 1 Civilian in 2010

- On December 17, 2010, at 8:24 p.m., the Marion Fire Department was dispatched to a fatal motor vehicle accident with ensuing fire. The victim, the 75-year old male driver, made the initial 911 call to report the accident. He was trapped in the vehicle as the car became fully involved. No one else was injured in this fire, and damages were not estimated.

Scituate Has Plymouth County's Largest Loss Fire in 2010

- On August 22, 2010, at 4:41 p.m., the Scituate Fire Department responded to a fire of undetermined cause in a single-family home. The fire started in the first floor living room. One (1) civilian was injured by this fire. Detectors were present and alerted the occupants. The building was not sprinklered. Damages from this fire were estimated to be \$650,000.

STRUCTURE FIRES**Reported Structure Fires Up**

The 798 structure fires caused 32 civilian injuries, 25 fire service injuries and an estimated dollar loss of \$12.3 million. These incidents represented 42% of Plymouth County's reported fires in 2010. The average estimated dollar loss per structure fire was \$15,358. The total number of reported structure fires increased by 71, or 10%, from the 727 reported in 2009.

Arson Caused 2% of Structure Fires

The 18 structure arsons caused an estimated dollar loss of \$1.1 million. Arson was indicated as the cause of 2% of the structure fires and 9% of Plymouth County's structure fire dollar loss. The 18 structure arsons accounted for 19% of the Plymouth County arson fires reported in 2010. The total number of reported structure arsons decreased by 7, or 28%, from 25 in 2009.

44% of Structure Arsons Occurred in Residences

Forty-four percent (44%) of Plymouth County's 18 structure arsons occurred in residential occupancies; 28% happened in special properties; 11% occurred in storage facilities; and 6% each happened in mercantile or business properties, educational facilities and institutional facilities.

BUILDING FIRES

There were 789 building fires of different types in Plymouth County in 2010. These 789 building fires accounted for 98.9% of all structure fires in Plymouth County.

88% of Plymouth Building Fires Occurred in People's Homes

Six hundred and thirty-eight (638), or 88%, of Plymouth County's 789 building fires occurred in residential occupancies. Mercantile and business properties had 36 fires. Thirty-two (32) building fires in Plymouth County occurred in special properties such as outbuildings and sheds. Thirty-one (31) fires took place in storage facilities. Twenty-one (21) fires took place in public assembly properties, including restaurants and churches.

Hospitals, prisons, and other institutional buildings experienced 16 fires. Eight (8) building fires took place in educational facilities. Five (5) fires took place in manufacturing and processing facilities. Two (2) fires occurred in industrial, utility, defense, agricultural or mining facilities in Plymouth County in 2010.

RESIDENTIAL FIRES

Residential Building Fires Up Slightly

There were 638 reported residential building fires in Plymouth County in 2010. These 638 fires are an increase of 26, or 4%, from the 612 residential building fires reported in 2009.

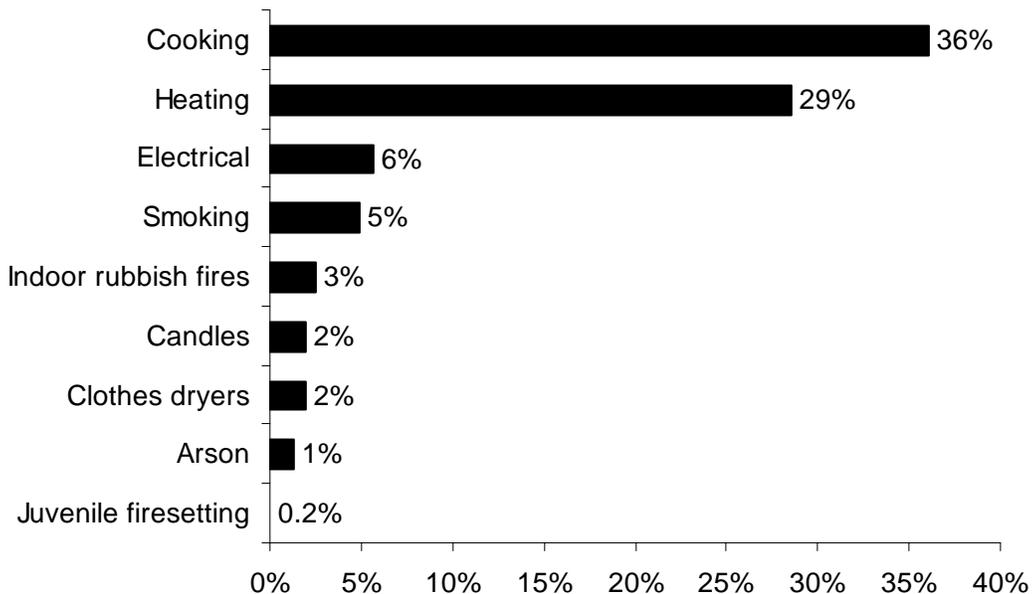

1- & 2-Family Homes Accounted for Over 3/4 of Residential Building Fires

The peak fixed property uses for residential building fires were 1- & 2-family homes, accounting for 76% of the residential building fires in Plymouth County; 22% occurred in apartments. Dormitories, rooming houses, hotels or motels, and residential board and care facilities each had less than 1% of these fires. Nine (9), or 1%, of the residential building fires in Plymouth County occurred in unclassified residential buildings.

Cooking & Heating Leading Causes of Residential Fires

The leading cause of the 638 residential building fires in Plymouth County was unattended cooking and other unsafe cooking practices, accounting for 36% of these fires. Heating problems caused 29% of the fires in people’s homes. Electrical problems caused 6% and smoking caused 5% of these fires. Indoor rubbish fires caused 3% of these fires. Candles and clothes dryers each caused 2% of residential fires. Arson caused 1%, and juvenile-set fires were responsible for less than 1% of the residential fires in Plymouth County in 2010.

2010 Leading Causes of Fires in Plymouth County Homes

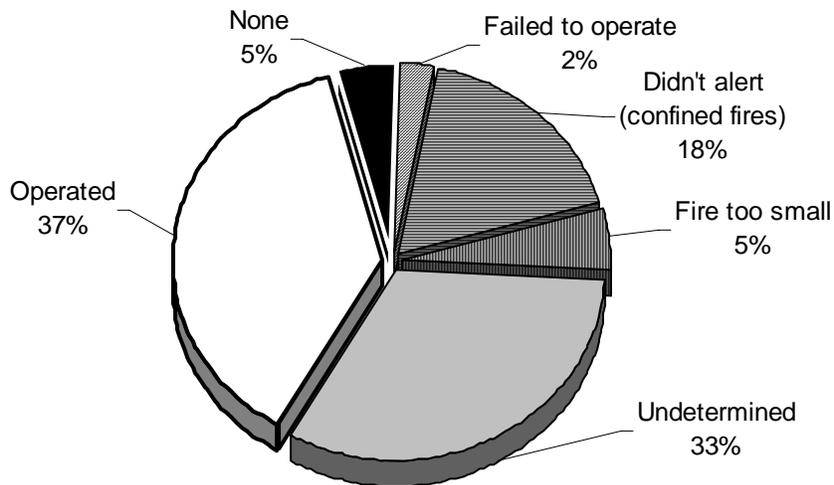

58% of Residential Building Fires Are Confined to Non-Combustible Containers¹

Three hundred and seventy-one (371), or 58% of all residential building fires, were reported as confined to non-combustible containers in 2010. One hundred and ninety-three (193) of the reported fires were cooking fires contained to a non-combustible container accounting for 30% of residential building fires. One hundred and four (104), or 16%, were fires confined to a fuel burner or boiler malfunction. Sixty (60), or 9%, of all residential building fires reported in 2010 were fires confined to a chimney. Thirteen (13), or 2%, of these fires were contained rubbish fires.

Detectors Alerted Occupants in 37% of Fires

Smoke or heat detectors operated and alerted the occupants in 240, or 37%, of the residential building fires. In 18% of these fires², the detectors did not alert the occupants. Detectors were present but did not operate in 2% of these incidents. In 5% of these fires, no detectors were present at all. The fire was too small to trigger the detector in 5% of the residential fires. Smoke detector performance was undetermined in 208 incidents, or 33%, of Plymouth County’s residential building fires.

Detector Status in Plymouth County's Residential Structure Fires 2010

¹ In MFIRS v5 a fire in a building contained to a non-combustible container (Incident Type = 113-118) does not have to have a Fire Module completed. Therefore the following data fields do not need to be completed: Area of Origin, Detector Status, Item First Ignited, Heat Source, Factors Contributing to Ignition, Cause of Ignition, and Equipment Involved In Ignition. These incidents are not included in the analysis of these fields.

² These represent confined fires where it was reported that the detector did not alert the occupants.

33% of Failed Detectors Had Dead, Missing or Disconnected Batteries

Of the 15 fires where smoke detectors were present but failed to operate, three, or 20%, failed because the batteries were either missing or disconnected. Two (2), or 13%, did not operate because of dead batteries. Another two detectors, or 12%, failed from a power failure, shutoff or disconnect. One (1), or 4%, failed because of improper installation or placement. It was undetermined or unclassified in seven cases, or 47%, why the detectors failed to operate.

VACANT BUILDINGS**5% of Building Fires Occurred in Vacant Buildings**

Plymouth County reported 38 fires that occurred in buildings that were vacant, under construction or demolition³. This represented 5% of the total 789 building fires reported to MFIRS in 2010. Nineteen (19) fires occurred in vacant residential properties. Eleven (11) vacant building fires occurred in storage facilities. Three (3) of these fires happened in mercantile and business properties, and another three fires occurred in special properties.

Eight (8), or 21%, of the vacant building fires in Plymouth County in 2010 were determined to be intentionally set. Four (4) of these fires occurred in single-family homes. Two (2) occurred in apartments and one each happened in an outbuilding or shed and an unclassified special property.

JUVENILE-SET FIRES**15 Juvenile-set Fires**

There were 15 reported juvenile-set fires in Plymouth County in 2010. The three structure fires, five brush fires, six special outside fires, and one cultivated vegetation or crop fire caused \$40,800 in estimated damages.

ARSONS**93 Total Arsons — 18 Structures, 12 Vehicles & 63 Other Arsons**

Ninety-three (93), or 5%, of Plymouth County's 1,903 fires were considered intentionally set, or, for purposes of this analysis, arson⁴. The 18 structure arsons, 12 motor vehicle arsons and 63 outside and other arsons caused an estimated dollar loss of \$1.1 million.

³ In version 4 a vacant building was defined by having a Fixed Property Use code in the subsection of construction, unoccupied properties, between 910 & 919. However in version 5, the Property Use is separate from the Building Status. In v5 a building is considered vacant if the Building Status is coded: 1- Under Construction; 3-Idle, not routinely used; 4-Under major renovation; 5-Vacant, secured; 6-Vacant, unsecured; & 7-Being demolished. The building use is coded separately in the Property Use field.

⁴ In MFIRS v5 a fire is considered an arson if the Cause of Ignition = 1 (Intentional) and the Age of Person (Fire Module) is greater than 17 or if the field is blank; or if the Wildland Module is used, the Wildland Fire Cause = 7 (Incendiary) and the Age of the Person (Wildland Module) is greater than 17 or if the field is left blank.

Outside Arsons Up

The total number of reported arson fires increased by 15 from the 78 reported in 2009. Reported structure arsons decreased by seven from 25 the previous year. Motor vehicle arsons decreased by 11 from 23 in 2009. Reported outside and other arsons increased by 33 from 30 reported the year before.

ALL INCIDENTS

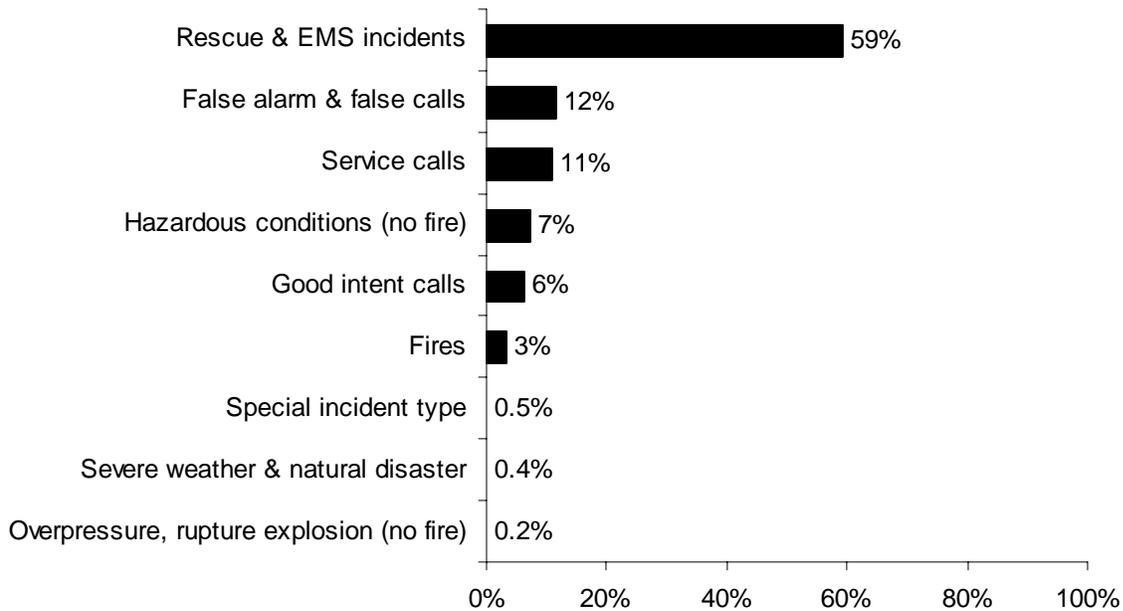

Rescue & EMS Calls Are 59% of All Reported Responses

In 2010, Plymouth County fire departments reported 58,570 responses⁵ to MFIRS. Of these 58,570 incidents, 56,559 non-fire calls were voluntarily reported.

Of these 56,559 non-fire calls, 34,748, or 59%, of the total responses reported in 2010, were reported rescue and emergency medical services (EMS) calls; 6,819, or 12%, were reported false alarm or false calls; 6,331, or 11%, were reported service calls such as lock-outs, water or smoke problems, unauthorized burning or public service assistance; 4,306, or 7%, were reported hazardous condition calls with no fire; 3,761, or 6%, were reported good intent calls; 278, or 0.5%, were special incident type calls such as citizen complaints; 214, or 0.4%, were severe weather responses; and 102, or 0.2%, were reported overpressure, rupture, explosion or overheat calls with no fire.

Two thousand and eleven (2,011), or 3%, of the total responses submitted by Plymouth County fire departments were fires.

2010 Responses by Incident Type

⁵ These figures include responses in which Plymouth County fire departments gave mutual aid to other fire departments.

Plymouth County Fire Departments Gave Mutual Aid 1,843 Times

In 2010, Plymouth County fire departments reported coming to the aid of other fire departments 1,843 times. Of these 1,843 responses, 1,360, or 74%, were for rescue or EMS calls; 207, or 11%, were for service calls such as cover assignments; 133, or 7%, were for good intent calls; 93, or 5%, were for fires; 25, or 1%, were for hazardous conditions calls with no fire; 21, or 1%, were for false alarms or false calls; and four, or 0.2%, were for a special incident type call.

Plymouth County Received Mutual Aid in 1,922 Incidents

In 2010, Plymouth County fire departments received aid from surrounding departments in 1,922 incidents. Of these 1,922 incidents, 1,663, or 87%, were rescue and emergency medical services calls; 110, or 6%, were for fires; 71, or 4%, were hazardous conditions calls with no fire; 40, or 2%, were false alarms or false calls; 22, or 1%, were good intent calls; 13, or 1%, were service calls; and three, or 0.2%, were reported overpressure, rupture, explosion or overheat calls with no fire.

⁸ This field does not need to be completed for confined fires. Certain codes are inferred from the Incident Type.

⁹ Some fields in version 5 allow for multiple entries. Therefore the number of entries may be greater than the actual number of incidents being analyzed. These figures were calculated only from those incidents, which were coded as Unconfined fires (Incident Types 111-112 or 120-129). The USFA & NFPA do not recommend inferring codes for Factors Contributing to Ignition from the fires contained to non-combustible containers (Incident Types 113 – 118). This field does not need to be completed for confined fires.

¹⁰ This field does not need to be completed for confined fires. Certain codes are inferred from the Incident Type.

¹¹ These figures were calculated only from those incidents, which were coded as Unconfined fires (Incident Types 111-112 or 120-129). The USFA & NFPA do not recommend inferring codes for Cause of Ignition from the fires contained to non-combustible containers (Incident Types 113 – 118). This field does not need to be completed for confined fires.

Brockton Fires in 2010

375 Total Fires — 181 Structures, 41 Vehicles & 153 Other Fires

The Brockton Fire Department reported 375 fires to the Massachusetts Fire Incident Reporting System (MFIRS) in 2010. The 181 structure fires, 41 motor vehicle fires, 63 outside rubbish fires, 46 brush fires, 15 special outside fires; one cultivated crop or vegetation fire; and 28 unclassified fires caused eight civilian injuries, 11 firefighter injuries and an estimated dollar loss of \$3.3 million.

All Fires Up in 2010

Total fires increased by 176 from the 199 incidents reported in 2009. Reported structure fires were up 43 from the 138 reported during the previous year. Motor vehicle fires increased by six from 35 the year before. Outside and other fires increased by 127 from the 26 reported in 2009.

The large increase in outside fires is mainly due to Brockton reporting for the first time, all of their incidents in 2010, not just the mandated fires that cause a dollar loss or human casualty.

BROCKTON FIRES FROM 2006 TO 2010

	Total Fires	Structure Fires	Vehicle Fires	Other Fires	Total Arsons	Structure Arsons	Vehicle Arsons	Other Arsons
2006	163	124	24	15	12	7	4	1
2007	311	211	59	41	18	13	4	1
2008	197	142	36	19	12	9	1	2
2009 ¹	199	138	35	26	17	11	5	1
2010 ²	375	181	41	153	25	8	3	14

BUILDING FIRES

There were 181 building fires of different types in Brockton in 2010. These 181 building fires accounted for all of the structure fires in Brockton.

86% of Building Fires in Homes

The 181 building fires that occurred in Brockton in 2010 can be broken down by fixed property use as follows: 156, or 86% of all building fires, were in residential properties; eight happened in mercantile or business properties; seven fires happened in storage facilities; six fires happened in a public assembly buildings; two fires occurred in institutional facilities; and one fire each occurred at an industrial facility and a manufacturing facility.

¹ July 2009 fires not included.

² 2010 is the first year that Brockton reported all of their incident electronically in the version 5 format. This included all fires not just the fires mandated by statute. This is the main reason for the large increase in outside fires and subsequently total fires.

RESIDENTIAL FIRES

Residential Building Fires Up

There were 156 reported residential building fires in Brockton in 2010. These 156 fires are an increase of 36 from the 120 reported residential building fires reported in 2009.

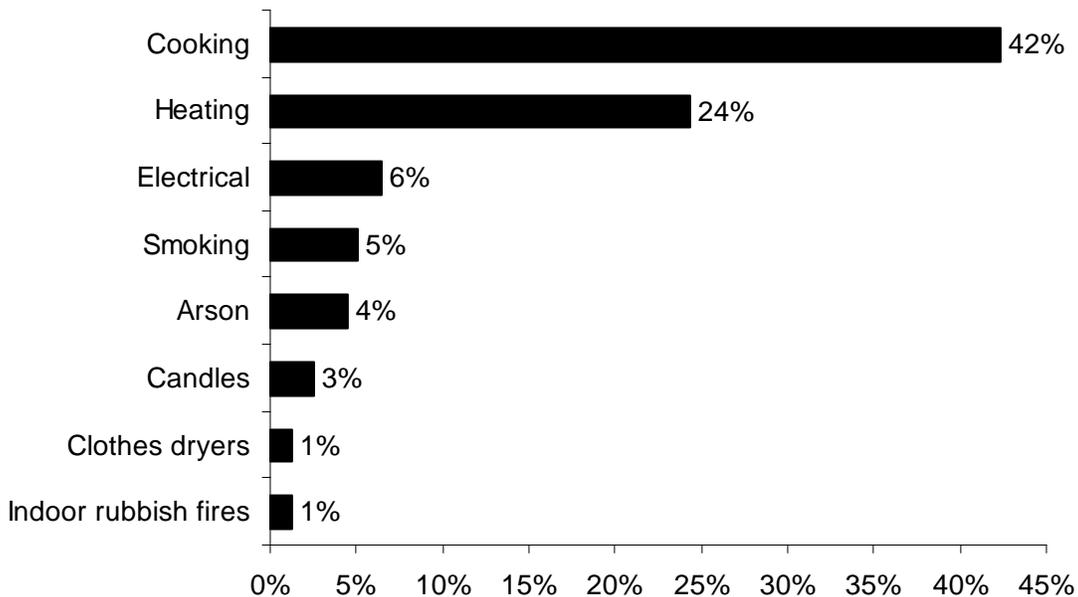

1- or 2-Family Homes Accounted for 49% of Residential Building Fires

The peak fixed property uses for residential building fires in Brockton were 1- or 2-family homes, accounting for 49% of the building fires; 46% occurred in apartments; and 1% each happened in hotels or motels, rooming houses and dormitories. Three percent (3%) occurred in unclassified residences.

Unattended Cooking Leading Cause of Residential Fires

The leading cause of residential building fires in Brockton was unattended cooking and other unsafe cooking practices, accounting for 42% of these fires. Heating fires caused 24% of these fires. Electrical problems caused 6% of these fires. Smoking was the cause of 5% of Brockton’s residential fires. Arsons caused 4% of these fires. Candles caused 3% of the fires. Clothes dryers and indoor rubbish fires each caused 1% of the fires in Brockton’s residential occupancies in 2010.

2010 Leading Causes of Fires in Brockton Homes

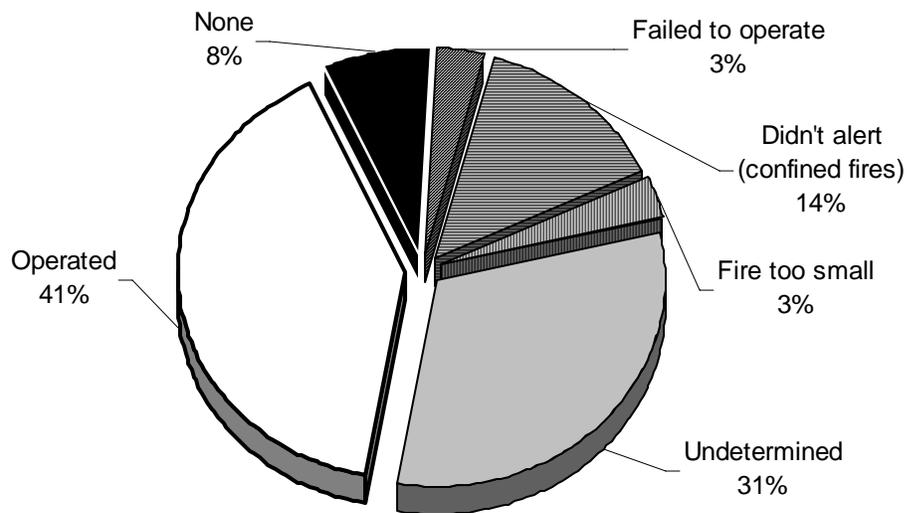

1/2 of Residential Building Fires Are Confined to Non-Combustible Containers³

Seventy-eight (78), or 50% of all residential building fires were confined to non-combustible containers in 2010. Forty-seven (47), or 30%, of all residential building fires reported in 2010 were cooking fires contained to a non-combustible container. Thirty (30), or 19%, were fires confined to a fuel burner or boiler malfunction. One (1) fire, or 1%, was reported to have been contained to a chimney or flue.

Detectors Worked in 60% of Fires

Smoke or heat detectors operated and alerted the occupants in 63, or 40%, of the residential building fires. In 14% of these fires⁴, the detectors did not alert the occupants. Detectors were present but did not operate in 3% of these incidents. In 8% of these fires, no detectors were present at all. The fire was too small to trigger the detector in 3% of these fires. Smoke detector performance was undetermined in 49 incidents, or 31% of Brockton's residential building fires.

Detector Status in Brockton's Residential Fires 2010

Undetermined Why 4 Out of 5 Detectors Failed

It was undetermined in four of the five cases why the detector failed to operate. A dead battery was the reason the detector failed in one case.

³ In MFIRS v5 a fire in a building contained to a non-combustible container (Incident Type = 113-118) does not have to have a Fire Module completed. Therefore the following data fields do not need to be completed: Area of Origin, Detector Status, Item First Ignited, Heat Source, Factors Contributing to Ignition, Cause of Ignition, and Equipment Involved In Ignition. These incidents are not included in the analysis of these fields.

⁴ These represent confined fires where it was reported that the detector did not alert the occupants.

VACANT BUILDINGS

7% of Building Fires Occurred in Vacant Buildings

Brockton reported 12 fires that occurred in buildings that were vacant, under construction or demolition⁵. This represented 7% of the total 181 building fires reported to MFIRS in 2010. Six (6) one- or two-family homes, three apartment buildings, one specialty shop, one outside material storage area; and one outbuilding or shed were reported as vacant building fire incidents.

JUVENILE-SET FIRES

No Juvenile-set Fires in 2010

Brockton did not report any juvenile-set fires in 2010.

ARSONS

25 Arsons⁶ - 8 Structure, 3 Motor Vehicle and 14 Outside & Other

Twenty-five (25), or 7%, of Brockton's 375 fires were considered intentionally set, or, for purposes of this analysis, arson. There were eight structure arsons, three motor vehicle arsons and 14 outside and other arsons.

Outside Arsons Up in 2010

The total number of arsons increased by eight from the 17 reported in 2009. Reported structure arsons decreased by three from the 11 reported in 2009. Motor vehicle arsons decreased by two from the five reported in 2009. Outside and other arsons increased by 13 from the one reported the previous year.

58 Fires Reported as Undetermined or Still Under Investigation

In 2010, Brockton reported 58 fires under investigation or cause undetermined after investigation. Forty-seven (47), or 81%, of these fires were reported to be undetermined after investigation. The other 11, or 19%, were still under investigation.

Nine (9), or 16%, of these 47 fires were structure fires. Nineteen (19), or 33% were motor vehicle fires; and 30, or 52%, were outside or other fires. Because so many fires or under investigation or undetermined after investigation, the true arson number might be actually higher in Brockton for 2010.

⁵ In version 4 a vacant building was defined by having a Fixed Property Use code in the subsection of construction, unoccupied properties, between 910 & 919. However in version 5, the Property Use is separate from the Building Status. In v5 a building is considered vacant if the Building Status is coded: 1- Under Construction; 3-Idle, not routinely used; 4-Under major renovation; 5-Vacant, secured; 6-Vacant, unsecured; & 7-Being demolished. The building use is coded separately in the Property Use field.

⁶ In MFIRS v5 a fire is considered an arson if the Cause of Ignition = 1 (Intentional) and the Age of Person (Fire Module) is greater than 17 or if the field is blank; or if the Wildland Module is used, the Wildland Fire Cause = 7 (Incendiary) and the Age of the Person (Wildland Module) is greater than 17 or if the field is left blank.

ALL INCIDENTS

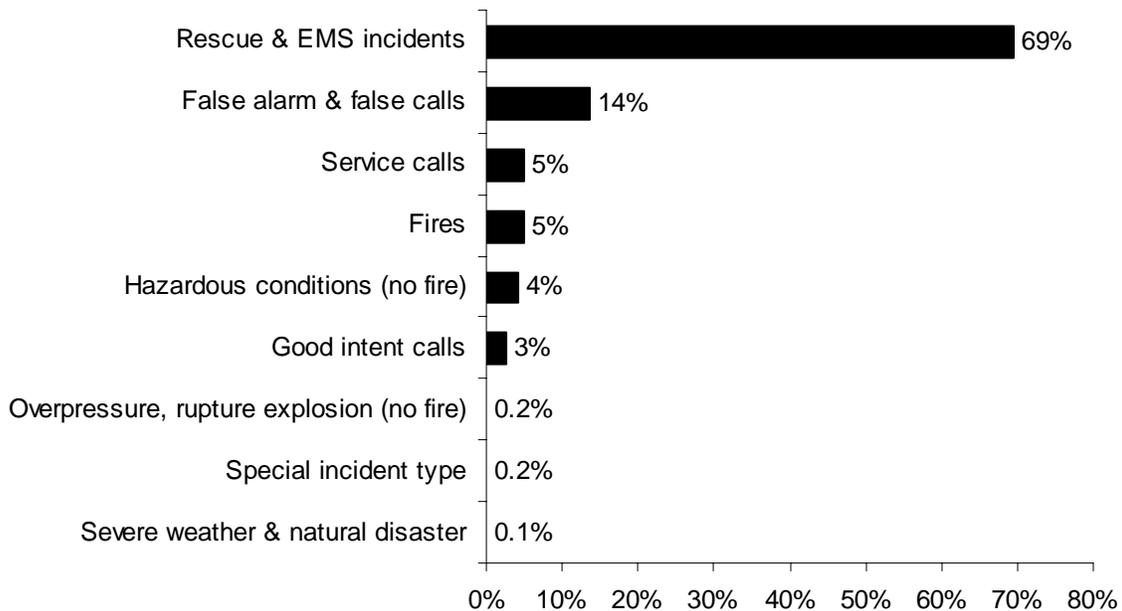

Rescue & EMS Incidents Are Over 2/3 of All Reported Incidents

In 2010, Brockton voluntarily reported 8,189 incidents to MFIRS. Of these 8,819 incidents, 7,804, or 95% were non-fire incidents. For the first time since 2001, Brockton voluntarily reported all of their incidents to MFIRS.

Of these 7,804 non-fire incidents 5,691, or 69% of all reported incidents in 2010, were reported rescue and emergency medical services (EMS) calls; 1,109, or 14%, were reported false alarm or false calls; 411 incidents, or 5%, was a service calls; 344, or 4%, were reported hazardous condition calls with no fire; 212, or 3%, were good intent calls; 17, or 0.2%, were overpressure, rupture or explosions with no after fire calls; 15, or 0.2%, were special incident types; and five, or 0.1%, were severe weather or natural disaster calls.

In 2010, Brockton reported 385 fires⁷, accounting for 5% of all reported incidents.

2010 Incidents by Incident Type

Brockton Gave Mutual Aid in 8 Reported Incidents

In 2010, Brockton reported coming to the aid of other fire departments eight times. Four, or 50%, of these calls were rescue or EMS calls; two, or 25%, were for fires; one, or 17% was for a false alarm or false call; and the other call, or 17%, was for a hazardous condition with no fire.

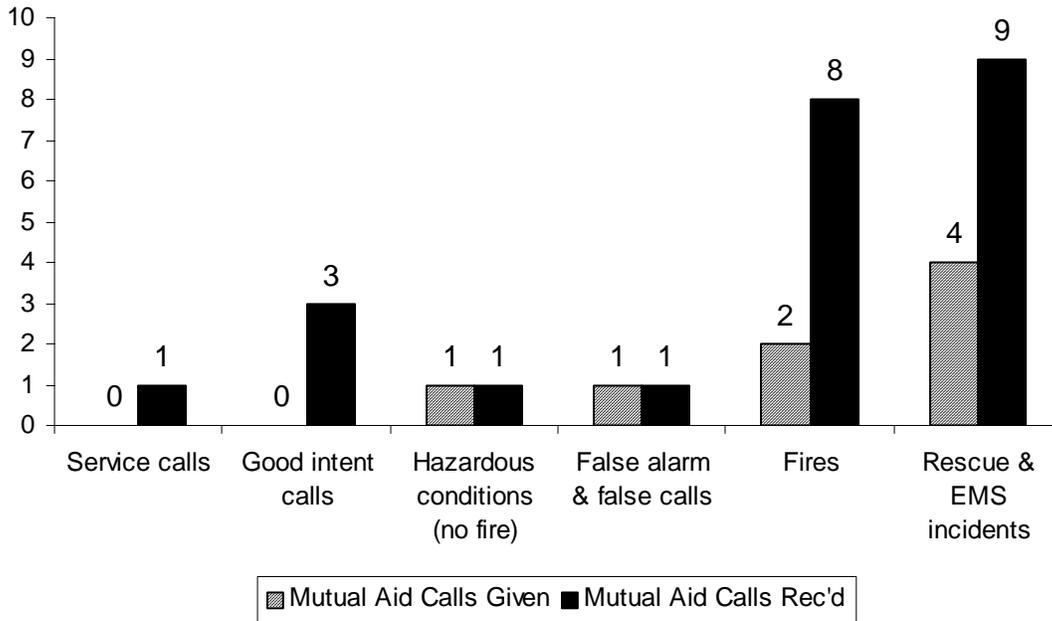

⁷ This includes fires that Brockton responded to as mutual aid calls outside of their jurisdiction.

Brockton Received Mutual Aid in 23 Incidents

In 2010, surrounding fire departments gave aid to Brockton during 23 incidents. Nine, or 39%, were for rescue or EMS incidents, eight, or 35%, of these incidents were for fires, three, or 13% were good intent calls; one, or 4%, was for a false alarm or false call; another call, or 4%, was for a service call; and the last mutual aid received call, or 4%, was for a hazardous condition call with no fire.

The following chart compares the number of calls the Brockton Fire Department gave mutual aid to a neighboring community compared to the number of calls where a neighboring community assisted Brockton. In 2010 Brockton received aid from other fire departments almost three times as much as they were asked for it.

¹⁰ This field does not need to be completed for confined fires. Certain codes are inferred from the Incident Type.

¹¹ Some fields in version 5 allow for multiple entries. Therefore the number of entries may be greater than the actual number of incidents being analyzed. These figures were calculated only from those incidents, which were coded as Unconfined fires (Incident Types 111-112 or 120-129). The USFA & NFPA do not recommend inferring codes for Factors Contributing to Ignition from the fires contained to non-combustible containers (Incident Types 113 – 118). This field does not need to be completed for confined fires.

¹² This field does not need to be completed for confined fires. Certain codes are inferred from the Incident Type.

¹³ These figures were calculated only from those incidents, which were coded as Unconfined fires (Incident Types 111-112 or 120-129). The USFA & NFPA do not recommend inferring codes for Cause of Ignition from the fires contained to non-combustible containers (Incident Types 113 – 118). This field does not need to be completed for confined fires.

¹⁴ This figure contains the fire that Brockton gave mutual aid to in another jurisdiction.

Worcester County Fires 2010

2010 Fires

*Non-reporting fire department

MFIRS
Massachusetts Fire Incident Reporting System

Worcester County Fires in 2010

4,282 Total Fires — 2,249 Structures, 395 Vehicles & 1,638 Other Fires

Worcester County ranked third out of the fourteen Massachusetts counties in total reported fires. Worcester County fire departments reported 4,282 fires to the Massachusetts Fire Incident Reporting System (MFIRS) in 2010. The 2,249 structure fires, 395 motor vehicle fires, 809 brush fires, 656 outside rubbish fires, 104 special outside fires, five cultivated vegetation or crop fires and 64 unclassified fires caused five civilian deaths, 53 civilian injuries, 105 fire service injuries and an estimated dollar loss of \$23 million. Worcester County's fires accounted for 13% of the 32,680 Massachusetts fires reported in 2010.

Fifty-nine (59), or 98.3%, of the 60 fire departments in Worcester County either reported incidents to the Massachusetts Fire Incident Reporting System (MFIRS) or certified that they had no reportable fires in 2010.

All Fires Up

Total fires increased by 477, or 13%, from 3,805 incidents in 2009. Reported structure fires increased by 70 from the 2,179 reported during the previous year. Motor vehicle fires increased by 14 from 381 the year before. Outside and other fires increased by 393 from 1,245 the year before.

Brush Fires Up by 44%

Brush fires increased by 246, or 44%, from the 563 reported in 2010. This increase is the main reason for the rise in all Worcester County fires.

WORCESTER COUNTY FIRES FROM 2006 TO 2010

Year	Total Fires	Structure Fires	Vehicle Fires	Other Fires	Total Arsons	Structure Arsons	Vehicle Arsons	Other Arsons
2006	4,398	2,117	461	1,820	195	37	17	141
2007	4,634	2,275	501	1,858	149	40	21	88
2008	4,182	2,203	461	1,518	142	36	24	82
2009	3,805	2,179	381	1,245	185	40	29	116
2010	4,282	2,249	395	1,638	165	38	10	117

Fire and Fire Death Rates

Worcester County had 5.4 fires per 1,000 population. That figure ranks Worcester County third in the state and above the state rate of 5.0 fires per 1,000 population. Worcester County also had 0.06 fire deaths per 10,000 population ranking it tied for fifth among Massachusetts counties and slightly above the state rate of 0.05 fire deaths per 10,000 population.

5 Residents Died in 4 Worcester County Fires

- On January 14, 2010, at 6:18 a.m., the Spencer Fire Department responded to an arson fire at a single-family home. The fire was a murder-suicide event. The victim was a 66-year old woman. Her 69-year old husband set the fire, shot her, their horse, and then himself. He was transported to a local hospital where he later succumbed to his injuries. One (1) firefighter was injured at this fire. There were no detectors and the home was not sprinklered. No estimation was made for damages from this fire.
- On February 12, 2010, at 12:00 p.m., the Worcester Fire Department was dispatched to a smoking fire in a single-family home. The victim, an 83-year old man, was able to call 911 and tell them that he just ignited his cigarette while using oxygen and that his clothing had caught fire. He was transported to a local hospital where he succumbed to his injuries. There were no other injuries associated with this fire. Detectors were present, but it was undetermined if they operated. The home was not sprinklered. Damages from this fire were not estimated.
- On April 24, 2010, at 11:23 p.m., the Webster Fire Department was called to a smoking fire in a single-family home. The victim, a 46-year old man was smoking and possibly impaired by alcohol. Two (2) firefighters were injured at this fire. Detectors were present and operated. The home was not sprinklered. Damages were estimated to be \$50,000.
- On November 6, 2010, at 10:27 a.m., the Holden Fire Department was dispatched for a burned patient with unknown fire spread in a single-family home. Upon arrival, firefighters discovered a 68-year old man with burns on his body. The victim had collapsed into his fireplace and his clothing ignited. He was transported to a local hospital where he succumbed to his injuries. The fire was contained to the fireplace and the victim. It was undetermined if smoke detectors were present and the home was not sprinklered. No estimation was made for damages from this fire.

Largest Loss Fire in 2010

- On March 5, 2010, at 10:55 a.m., the Worcester Fire Department was called to a fire of undetermined cause at a grocery store. The fire is believed to have started on the first floor. Two (2) firefighters were injured at this fire. Detectors were present and they alerted the occupants. The building was not sprinklered. Damages from this fire were estimated to be \$1.5 million.

STRUCTURE FIRES

Reported Structure Fires Up

The 2,249 structure fires caused all five civilian deaths, 41 civilian injuries, 100 fire service injuries and an estimated dollar loss of \$21.4 million. These incidents represented 53% of Worcester County's reported fires in 2010. The average estimated dollar loss per

structure fire was \$9,528. The total number of reported structure fires increased by 70, or 3%, from the 2,179 reported in 2009.

Arson Caused 2% of Structure Fires

The 38 structure arsons caused two civilian deaths, two civilian injuries, three fire service injuries and an estimated dollar loss of \$615,775. Arson was indicated as the cause of 2% of the structure fires and 3% of Worcester County's structure fire dollar loss. The 38 structure arsons accounted for 23% of the Worcester County arson fires reported in 2010. The total number of reported structure arsons decreased by two, or 5%, from 40 in 2009.

58% of Structure Arsons Occurred in Residences

Fifty-eight percent (58%) of Worcester County's 38 structure arsons occurred in residential occupancies; 11% happened in special properties; 8% occurred in storage facilities; 5% each happened in educational facilities, institutional facilities, and mercantile and business properties. Public assembly facilities, industrial facilities and manufacturing or processing facilities each had one structure arson in Worcester County in 2010.

BUILDING FIRES

There were 2,218 building fires of different types in Worcester County in 2010. These 2,218 building fires accounted for 98.6% of all structure fires in Worcester County.

85% of Worcester Building Fires Occurred in People's Homes

One thousand eight hundred and eighty (1,880), or 85%, of Worcester County's 2,218 building fires occurred in residential occupancies. Mercantile and business properties had 70 fires. Sixty-nine (69) fires took place in public assembly properties, including restaurants and churches. Hospitals, prisons, and other institutional buildings experienced 53 fires. Forty-two (42) building fires in Worcester County occurred in special properties such as outbuildings, bus stop shelters and tollbooths. Thirty-seven (37) building fires took place on educational properties. Thirty-four (34) fires took place in manufacturing and processing facilities. Twenty-nine (29) fires took place in storage properties. Three (3) fires occurred in industrial, utility, defense, agricultural or mining facilities, and one fire occurred in an unclassified building in Worcester County in 2010.

RESIDENTIAL FIRES

Residential Building Fires Are Up Slightly

There were 1,880 reported residential building fires in Worcester County in 2010. These 1,880 fires are an increase of 43, or 2%, from the 1,837 residential building fires reported in 2009.

Apartments Accounted for 46% of Residential Building Fires

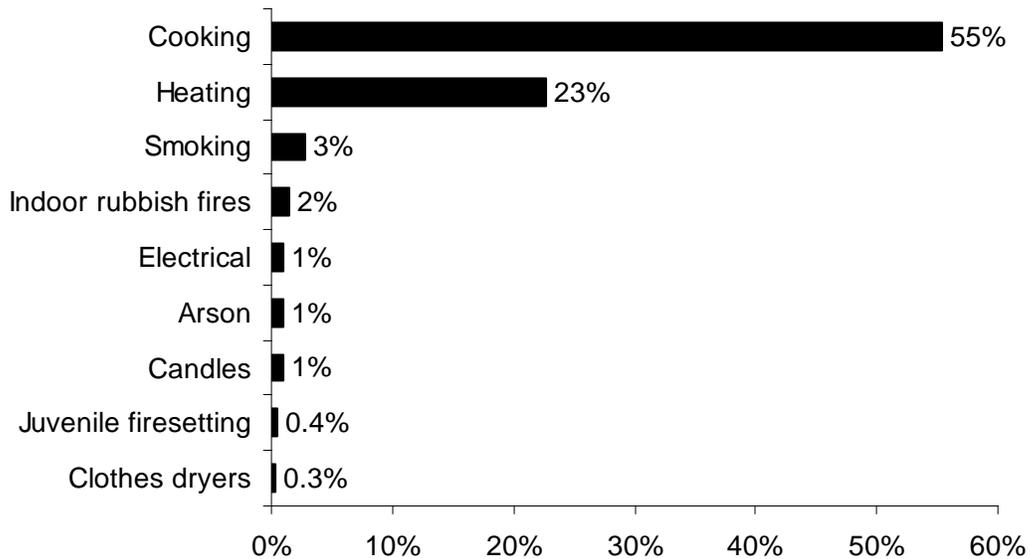

The peak fixed property uses for residential building fires were apartments, accounting for 46% of the residential building fires in Worcester County; 43% occurred in one- or two-family homes; 4% happened in rooming houses; 3% occurred in dormitories; 1%

occurred in residential board and care facilities; and less than 1% happened in hotels or motels. Twenty-seven (27), or 1%, of the residential building fires in Worcester County occurred in unclassified residential buildings.

Unattended Cooking Caused 55% of Residential Fires

The leading cause of residential building fires in Worcester County was unattended cooking and other unsafe cooking practices accounting for 55% of these fires. Heating caused 23% of fires in people’s homes. Smoking accounted for 3% of these fires. Indoor rubbish fires caused 2%. Arson, electrical problems and candles each caused 1% of the fires in people’s homes in Worcester County in 2010. Juvenile-set fires and clothes dryers each caused less than 1% of these fires in 2010.

2010 Leading Causes of Fires in Worcester County Homes

76% of Residential Building Fires Are Confined to Non-Combustible Containers¹

One thousand four hundred and twenty-one (1,421), or 76% of all residential building fires, were reported as confined to non-combustible containers in 2010. Nine hundred and eighty-four (984) of the reported fires were cooking fires contained to a non-combustible container accounting for 52% of residential building fires. Two hundred and thirty-two (232), or 12%, were fires confined to a fuel burner or boiler malfunction. One hundred and seventy-six (176), or 9%, of all residential building fires reported in 2010 were

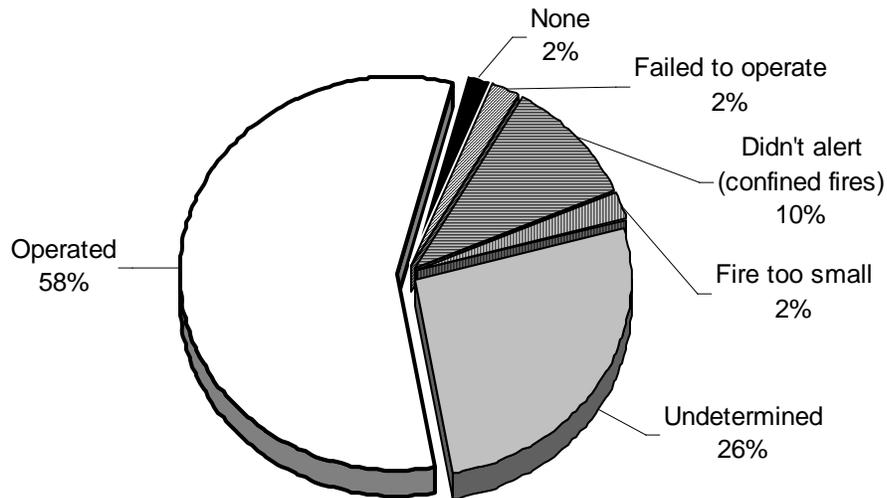

¹ In MFIRS v5 a fire in a building contained to a non-combustible container (Incident Type = 113-118) does not have to have a Fire Module completed. Therefore the following data fields do not need to be completed: Area of Origin, Detector Status, Item First Ignited, Heat Source, Factors Contributing to Ignition, Cause of Ignition, and Equipment Involved In Ignition. These incidents are not included in the analysis of these fields.

confined to a chimney. Twenty-seven (27), or 1%, of the residential building fires in Worcester County in 2010 were contained rubbish fires. Two (2) fires, or less than 1%, were confined to commercial compactors.

Detectors Alerted Occupants in 58% of Fires

Smoke or heat detectors operated and alerted the occupants in 1,069, or 58%, of the residential building fires. In 10% of these fires², the detectors did not alert the occupants. Detectors were present but did not operate in 2% of these incidents. In another 2% of these fires, no detectors were present at all. The fire was too small to trigger the detector in 2% of the residential fires. Smoke detector performance was undetermined in 498 incidents, or 26%, of Worcester County’s residential building fires.

Detector Status in Worcester County's Residential Structure Fires 2010

32% of Failed Detectors Had Missing or Disconnected Batteries

Of the 38 fires where smoke detectors were present but failed to operate, 12, or 38%, failed because the batteries were either missing or disconnected. Five (5), or 13%, failed because of a power failure, shutoff or disconnect. Three (3) detectors, or 8%, were defective. One (1), or 3%, did not operate because of a dead battery. It was undetermined or unclassified in 17 cases, or 45%, why the detectors failed to operate.

² These represent confined fires where it was reported that the detector did not alert the occupants.

VACANT BUILDINGS

2% of Building Fires Occurred in Vacant Buildings

Worcester County reported 39 fires that occurred in buildings that were vacant, under construction or demolition³. This represented 2% of the total 2,218 building fires reported to MFIRS in 2010. Twenty-four (24) fires occurred in vacant residential properties. Five (5) vacant building fires occurred in storage facilities. Three (3) of these fires occurred in mercantile and business properties. Two (2) of these fires occurred in manufacturing or processing facilities. Public assembly properties also accounted for two vacant building fire incidents; and two more occurred in special properties. One (1) vacant building fire occurred in an educational facility in Worcester County in 2010.

Seven (7), or 18%, of the vacant building fires in Worcester County in 2010 were determined to be intentionally set. Three (3) of these fires occurred in apartments. A single-family home, an unclassified residential building, an outbuilding or shed, and an unclassified special property each accounted for one vacant structure arson.

JUVENILE-SET FIRES

27 Juvenile-set Fires

There were 27 reported juvenile-set fires in Worcester County in 2010. The 10 structure fires, one motor vehicle fire, 12 brush fires, three special outside fires, and one outside rubbish fire caused two civilian injuries and \$209,451 in estimated damages.

ARSONS

165 Total Arsons⁴ — 38 Structures, 10 Vehicles & 117 Other Arsons

One hundred and sixty-five (165), or 4%, of Worcester County's 4,282 fires were considered intentionally set, or, for purposes of this analysis, arson. The 38 structure arsons, 10 motor vehicle arsons and 117 outside and other arsons caused two civilian deaths, three civilian injuries, three fire service injuries and an estimated dollar loss of \$626,776. Worcester County's arson fires accounted for 14% of the state's total arson fires, but only 9% of the state's total dollar losses from arsons.

³ In version 4 a vacant building was defined by having a Fixed Property Use code in the subsection of construction, unoccupied properties, between 910 & 919. However in version 5, the Property Use is separate from the Building Status. In v5 a building is considered vacant if the Building Status is coded: 1- Under Construction; 3-Idle, not routinely used; 4-Under major renovation; 5-Vacant, secured; 6-Vacant, unsecured; & 7-Being demolished. The building use is coded separately in the Property Use field.

⁴ In MFIRS v5 a fire is considered an arson if the Cause of Ignition = 1 (Intentional) and the Age of Person (Fire Module) is greater than 17 or if the field is blank; or if the Wildland Module is used, the Wildland Fire Cause = 7 (Incendiary) and the Age of the Person (Wildland Module) is greater than 17 or if the field is left blank.

Structure & Motor Vehicle Arson Fires Down

The total number of arsons decreased by 20 from 185 in 2009. Reported structure arsons decreased by two from 40 the year before. Motor vehicle arsons decreased 19 from 29 reported in 2009. Outside and other arsons increased by one from the 116 reported last year.

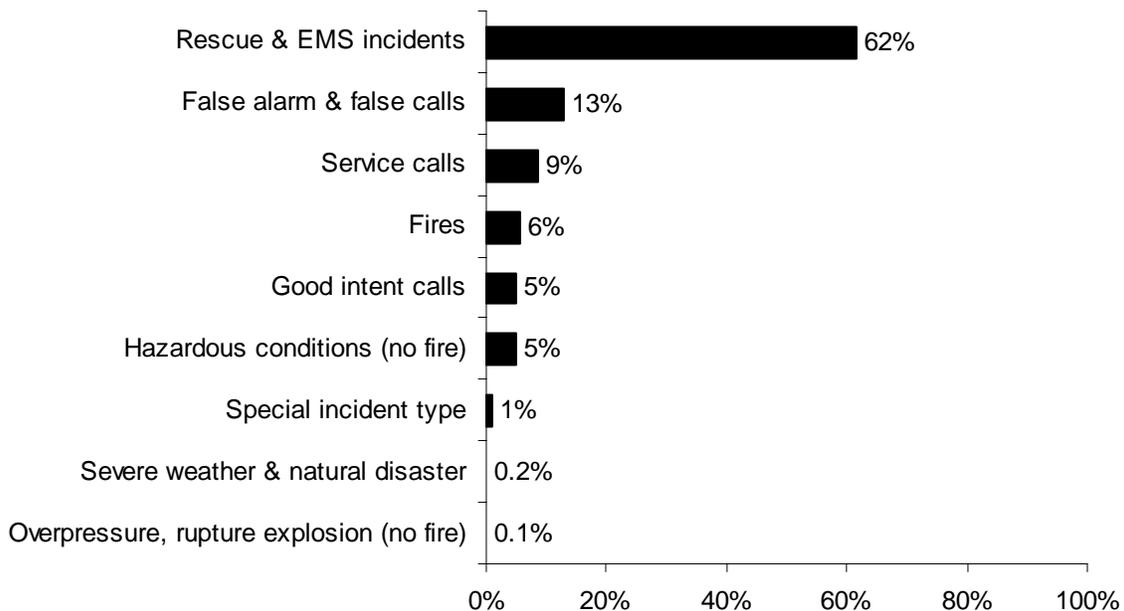

ALL INCIDENTS

Rescue & EMS Calls Are 62% of All Reported Responses

In 2010, fire departments in Worcester County reported 83,135 responses⁵ to MFIRS. This is an increase of 1,457 runs, or 2%, over the 81,678 reported in 2009. Of these 83,135 responses, 78,505 non-fire calls were voluntarily reported.

Of these 78,505 non-fire calls, 51,302, or 62%, of all the responses reported in 2010, were reported rescue and emergency medical services (EMS) calls; 10,791, or 13%, were reported false alarm or false calls; 7,115, or 9%, were reported service calls such as lock-outs, water or smoke problems, unauthorized burning or public service assistance; 4,199, or 5%, were reported good intent calls; 4,087, or 5%, reported hazardous condition calls with no fire; 743, or 1%, were special incident type calls such as citizen complaints; 148, or 0.2%, were severe weather calls; and 120, or 0.1%, were reported overpressure, rupture, explosion or overheat calls with no fire.

2010 Responses by Incident Type

⁵ These figures include responses in which Worcester County fire departments gave mutual aid to other fire departments.

Four thousand and six hundred and thirty (4,630), or 6%, of the total responses submitted by Worcester County fire departments were fires.

Worcester County Fire Departments Reported Giving Mutual Aid 1,986 Times

In 2010, Worcester County fire departments reported coming to the aid of other fire departments 1,986 times. Of these 1,986 responses, 1,019, or 51%, were for rescue or EMS incidents; 458, or 23%, were for service calls such as cover assignments; 304, or 15%, were for fires; 101, or 5%, were for good intent calls; 71, or 4%, were for false alarms or false calls; 28, or 1%, were for hazardous conditions calls with no fire; four, or 0.2%, were special incident types; and one, or 0.1%, was a severe weather call.

Worcester County Fire Departments Received Mutual Aid in 895 Incidents

In 2010, Worcester County fire departments reported receiving aid from surrounding departments in 895 incidents. Of these 895 incidents, 520, or 58% were rescue and emergency medical services calls; 225, or 25%, were for fires; 63, or 7%, were false alarms or false calls; 40, or 4%, were hazardous conditions calls with no fire; 27, or 3%, were good intent calls; 15, or 2%, were service calls; two, or 0.2%, were severe weather calls; two, or 0.2%, were reported overpressure, rupture, explosion or overheat calls with no fire; and one, or 0.1%, were special incident type calls.

Undetermined	27%

⁸ This field does not need to be completed for confined fires. Certain codes are inferred from the Incident Type.

⁹ Some fields in version 5 allow for multiple entries. Therefore the number of entries may be greater than the actual number of incidents being analyzed. These figures were calculated only from those incidents, which were coded as Unconfined fires (Incident Types 111-112 or 120-129). The USFA & NFPA do not recommend inferring codes for Factors Contributing to Ignition from the fires contained to non-combustible containers (Incident Types 113 – 118). This field does not need to be completed for confined fires.

¹⁰ This field does not need to be completed for confined fires. Certain codes are inferred from the Incident Type.

¹¹ These figures were calculated only from those incidents, which were coded as Unconfined fires (Incident Types 111-112 or 120-129). The USFA & NFPA do not recommend inferring codes for Cause of Ignition from the fires contained to non-combustible containers (Incident Types 113 – 118). This field does not need to be completed for confined fires.

Worcester Fires in 2010

1,430 Total Fires — 730 Structures, 95 Vehicles & 605 Other Fires

The Worcester Fire Department reported 1,430 fires to the Massachusetts Fire Incident Reporting System (MFIRS) in 2010. The 730 structure fires, 95 motor vehicle fires, 141 brush fires, 447 outside rubbish fires, 16 special outside fires, and one cultivated crop fire caused one civilian death, two civilian injuries, 67 fire service injuries and an estimated dollar loss of \$8.3 million.

Male Resident Killed While Smoking on Oxygen

- On February 12, 2010, at 12:00 p.m., the Worcester Fire Department was dispatched to a smoking fire in a single-family home. The victim, an 83-year old man, was able to call 911 and tell them that he just ignited his cigarette while using oxygen and that his clothing had caught fire. He was transported to a local hospital where he succumbed to his injuries. There were no other injuries associated with this fire. Detectors were present, but it was undetermined if they operated. The home was not sprinklered. Damages from this fire were not estimated.

Structure & Outside Fires Up 2010

Total fires increased by 198 from the 1,232 incidents reported in 2009. Reported structure fires increased by 34 from the 696 reported during the previous year. Motor vehicle fires declined by 16 from 111 the year before. Outside and other fires increased by 180 from the 425 reported the year before.

WORCESTER FIRES FROM 2006 TO 2010

	Total Fires	Structure Fires	Vehicle Fires	Other Fires	Total Arsons	Structure Arsons	Vehicle Arsons	Other Arsons

2009	1,232	696	111	425	56	13	12	31
2010	1,430	730	95	605	58	13	6	39

BUILDING FIRES

There were 725 building fires of different types in Worcester in 2010. These 725 building fires accounted for 99% of all structure fires in Worcester.

86% of Building Fires in Homes

The 725 building fires that occurred in Worcester in 2010 can be broken down by fixed property use as follows: 620, or 86% of all structure fires, were in residential properties; 26 fires took place in public assembly properties; 25 fires occurred in mercantile or business properties; 23 fires took place in institutional properties; 16 fires happened in educational properties; seven fires occurred at manufacturing or processing facilities; four fires occurred in storage facilities; and another four fires happened in special properties.

RESIDENTIAL FIRES

Apartments Accounted for 62% of Residential Building Fires

The peak fixed property uses for residential building fires were apartments, accounting for 62% of the building fires in Worcester; 18% occurred in one- or two-family homes; 11% occurred in rooming houses; 6% occurred in dormitories; 2% happened in residential board and care properties; 1% occurred in hotels and motels; and 1% occurred in unclassified residential properties.

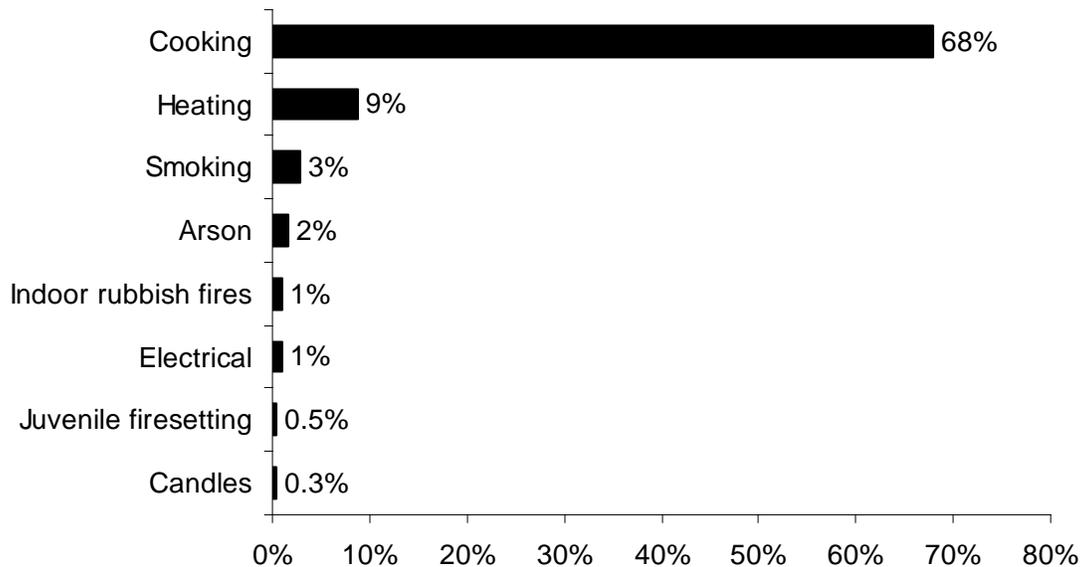

Residential Building Fires Were Up

There were 620 reported residential building fires in Worcester in 2010. These 620 fires were an increase of 31, or 5%, from the 589 residential building fires reported in 2009.

Unattended Cooking Caused Over 2/3 of All Residential Fires

The leading cause of residential building fires in Worcester was unattended cooking and other unsafe cooking practices, accounting for 68% of these fires. Heating fires accounted for 9% of these fires. Smoking caused 3% of the fires in Worcester homes and the only fatal fire. Arsons were responsible for 2% of these fires. Electrical fires and indoor rubbish fires each caused 1% of these fires. Juvenile-set fires and candles were each responsible for less than 1% of the residential building fires in Worcester in 2010.

2010 Leading Causes of Fire In Worcester Homes

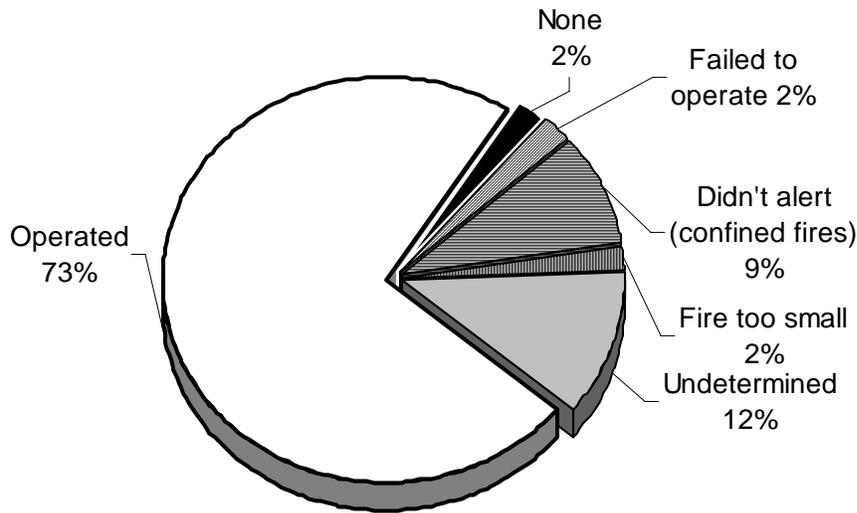

73% of Residential Building Fires Are Confined to Non-Combustible Containers¹

Four hundred and twenty-one (421), or 73% of all residential building fires were confined to non-combustible containers in 2010. Three hundred and ninety-one (391), or 63%, of all residential building fires reported in 2010 were cooking fires contained to a non-combustible container. Forty-three (43), or 7%, of all residential building fires were fuel burner or boiler malfunctions. Eleven (11) of the reported fires were confined to a chimney, accounting for 2% of residential building fires in Worcester in 2010. Six (6) rubbish fires contained to a non-combustible container caused 1% of these fires and one commercial compactor fire caused 1%, of these Worcester’s residential fires.

Detectors Alerted Occupants in Almost 3/4 of Fires

Smoke or heat detectors operated and alerted the occupants in 453, or 73%, of the residential building fires. In 9% of these fires², the detectors did not alert the occupants. Detectors were present but did not operate in 2% of these incidents. In 2% of these fires, no detectors were present at all. The fire was too small to trigger the detector in 2% of the residential fires. Smoke detector performance was undetermined in 73 incidents, or 12% of Worcester’s residential building fires.

Detector Status in Worcester Residential Fires 2010

¹ In MFIRS v5 a fire in a building contained to a non-combustible container (Incident Type = 113-118) does not have to have a Fire Module completed. Therefore the following data fields do not need to be completed: Area of Origin, Detector Status, Item First Ignited, Heat Source, Factors Contributing to Ignition, Cause of Ignition, and Equipment Involved In Ignition. These incidents are not included in the analysis of these fields.

² These represent confined fires where it was reported that the detector did not alert the occupants.

27% of Failed Detectors Had Missing or Disconnected Batteries

Of the 15 fires where smoke detectors were present but failed to operate, four, or 27%, failed because the batteries were either missing or disconnected. A power failure, shutoff or disconnect caused one, or 7%, of the detectors to fail. A dead battery was also responsible for one, or 7%, of the smoke detectors that failed to operate. It was undetermined in the other nine cases why the detectors failed to operate.

VACANT BUILDINGS**3% of Building Fires Occurred in Vacant Buildings**

Worcester reported 19 fires that occurred in buildings that were vacant, under construction or demolition. This represented 3% of the total 725 building fires reported to MFIRS in 2010. Ten (10) apartment buildings, two business offices, two outside structures, one storage facility, one unclassified residential property, one manufacturing facility, one dormitory and one shed were reported as vacant building fire incidents.

These 19 vacant building fires caused 11 fire service injuries. That is almost one firefighter injury for every vacant building fire in Worcester in 2010.

JUVENILE-SET FIRES**8 Juvenile-set Fires**

There were eight juvenile-set fires in Worcester in 2010. The five structure fires and three brush fires caused \$175,700 in estimated damages.

ARSONS**58 Total Arsons — 13 Structures, 6 Motor Vehicles, & 39 Other**

Fifty-eight (58), or 4%, of Worcester's 1,430 fires were considered intentionally set, or, for purposes of this analysis, arson. The 13 structure arsons, six motor vehicle arsons and 39 outside and other arsons caused an estimated dollar loss of \$137,151.

MV Arsons Decrease

The total number of arsons increased by two. This is a 4% increase from the 56 arsons reported in 2009. Reported structure arsons remained the same with 13 reported in both 2009 and 2010. Motor vehicle arsons decreased by six from 12 in 2009. Outside and other arsons increased by eight from the 31 reported the year before.

Worcester reported 186 fires that are still under investigation or undetermined after investigation. One hundred and twenty-two (122) of these fires were reported as under investigation and 64 were classified as undetermined.

ALL INCIDENTS

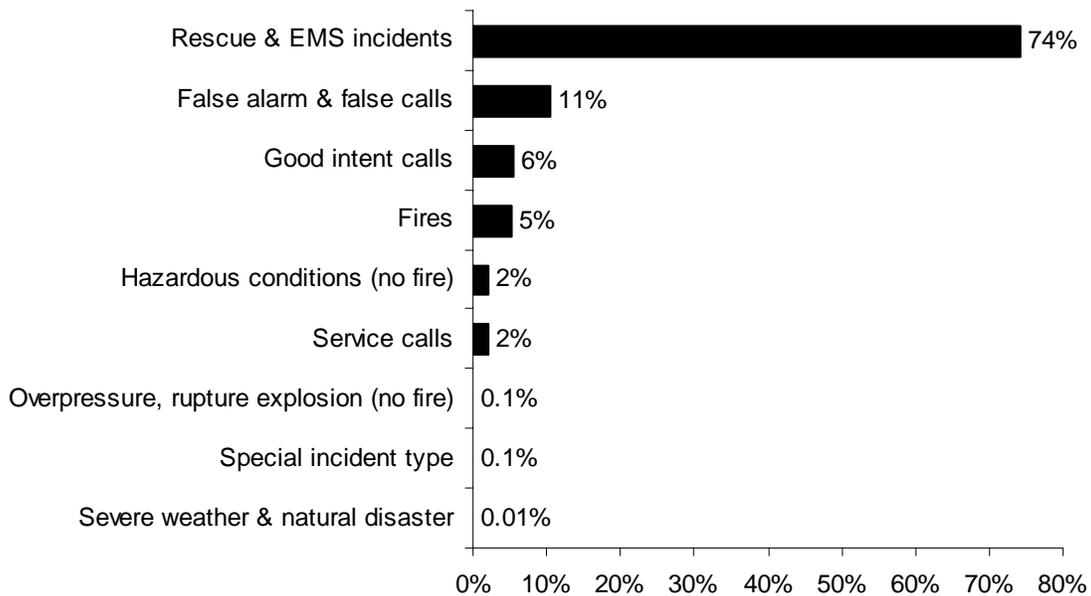

Rescue & EMS Calls Are Almost 3/4 of All Reported Incidents

In 2010, Worcester voluntarily reported 27,677 incidents to MFIRS. Of these 27,677 incidents, 26,246, or 95%, were non-fire incidents.

Of these 26,246 non-fire incidents 20,529, or 74% of all reported incidents in 2010, were reported rescue and emergency medical services (EMS) calls; 2,927, or 11%, were reported false alarm or false calls; 1,534, or 6%, were reported good intent calls; 669, or 2%, were reported hazardous condition calls with no fire; 537, or 2%, were reported service calls such as lock-outs, water or smoke problem, unauthorized burning or public service assistance; 29, or 0.1%, were reported overpressure, rupture, explosion or overheat calls with no fire; 19, or 0.1%, were special type incidents; and two, or 0.01%, were responses to incidents caused by severe weather.

In 2010, Worcester reported 1,431 fires, accounting for 5% of all reported incidents.

2010 Incidents by Incident Type

Worcester Gave Mutual Aid in 1 Incident

In 2010, Worcester reported giving mutual aid to other surrounding fire departments in one fire incident.

Worcester Did Not Report Receiving Any Mutual 2010

In 2010, Worcester did not report any incidents in which they received mutual aid from another fire department.

⁵ This field does not need to be completed for confined fires. Certain codes are inferred from the Incident Type.

⁶ Some fields in version 5 allow for multiple entries. Therefore the number of entries may be greater than the actual number of incidents being analyzed. These figures were calculated only from those incidents, which were coded as Unconfined fires (Incident Types 111-112 or 120-129). The USFA & NFPA do not recommend inferring codes for Factors Contributing to Ignition from the fires contained to non-combustible containers (Incident Types 113 – 118). This field does not need to be completed for confined fires.

⁷ This field does not need to be completed for confined fires. Certain codes are inferred from the Incident Type.

⁸ These figures were calculated only from those incidents, which were coded as Unconfined fires (Incident Types 111-112 or 120-129). The USFA & NFPA do not recommend inferring codes for Cause of Ignition from the fires contained to non-combustible containers (Incident Types 113 – 118). This field does not need to be completed for confined fires.

Month	Total Fires	Structure Fires	Vehicle Fires	Other Fires
January	104	89	10	5
February	76	54	12	10
March	93	49	7	37
